

# ANSI Energy Efficiency Standardization Coordination Collaborative (EESCC)

## Working Group 2: Systems Integration and Systems Communications

### Inaugural Plenary Status Report

*January 22-23, 2013 | Arlington, VA*

# ANSI EESCC WG2

- Henry Green  
President  
National Institute of Building Sciences (NIBS)
- Benjamin Goldstein (Substitute)  
Energy Efficiency Standards and Workforce Development  
Coordinator  
U.S. Department of Energy, Office of EERE

# ANSI EESCC WG2 - Scope

## Initial Scope

- Systems integration and systems communications (encompassing communications between building automation/controls systems, building equipment, and the electric grid)
- WG2 encompasses both communications within the building as well as communications to the grid and external connection points
  - Machine-to-machine communications have been included
  - Human-to-human communications have been excluded from the scope
- Smart Grid not covered—WG will point to NIST Smart Grid Interoperability Panel (SGIP)
- Vehicle-to-Building-to-Grid not covered—WG will point to work of Electric Vehicles Standards Panel

# ANSI EESCC WG2 - WG Coordination

## Coordination Between WGs

- WG2 noted that it will have likely share touch points with WG1, WG3, and potentially other EESCC WGs
- It will be important for the WGs not to silo their work, but to share information. Some of this coordination will take place at the steering committee level, between WG co-chairs.
- The coordination between working groups will be most productive after the inventory database is populated
