

## Standards Connect the World

From the simple to the complex, from the minute to the massive, from the local to the global, standards help to connect products, services, systems and personnel to those who need them. Efficiency, economy, quality, ecology, safety, reliability and interoperability are recognized as the characteristics of globally relevant standards and are the cornerstones of today's standardization infrastructure.

*Standards Connect the World*, the 2004 World Standards Day celebration theme, highlights the role that standards and conformity assessment programs play in offering solutions to technical, economic, societal and environmental challenges. Standards provide the vital linkage between industry, government, and consumers in today's interconnected world.
