Food Safety Policy, Technology & Regulatory Affairs

Background

Many leaders throughout the produce industry have increasingly recognized the cost and inefficiency of multiple standards and audits now being used to measure compliance with Good Agriculture Practices (GAPs). Neither produce suppliers nor retailers and foodservice companies are well served when duplicative standards and audits raise total supply chain costs without enhancement of overall food safety.

In addition to general business leaders, the United Fresh Produce Association Food Safety & Technology Council, consisting of food safety and quality assurance experts across the supply chain, has looked at a variety of GAP standards and audits in use and under development, and has concluded that there is sound scientific potential for harmonizing basic GAP standards to meet the needs of these many stakeholders.

As a means to further explore the potential and accelerate the possibility for industry-wide commitment to harmonized standards, United Fresh hosted a *Global Conference on Produce Food Safety Standards* immediately following its annual convention in late April. Some 300 leaders from each stage of the produce supply chain, government, and third-party standard owners and auditors from around the world participated in the two-day conference.

During the conference, government and private sector stakeholders involved with both on-farm produce

Is Farm Certification Too Big for Small Farmers?

Sep 09, 2010 | From: Kristian | Food Safety, Fresh Produce, Integrity | 2 Comments

Whether or not to apply a single standard for Food Safety Practices and Standards to both small- and medium-sized growers has been discussed in many countries for quite some time. Read also the article in The Packer "Smaller growers worry over food safety". [Read more...](#)

What's the Recipe for Integrity in Farm Certification?

Sep 09, 2010 | From: Kristian | Integrity | [Leave a comment](#)

How to design a model to establish a foundation for achieving harmonized Good Agricultural Practices across the globe?

How to build a model that is flexible and easily adaptable to 100 and more countries and different product categories for different markets?
