Vehicles, Energy, and Security

October 12, 2011

Standardisation on Co-operative systems for ITS

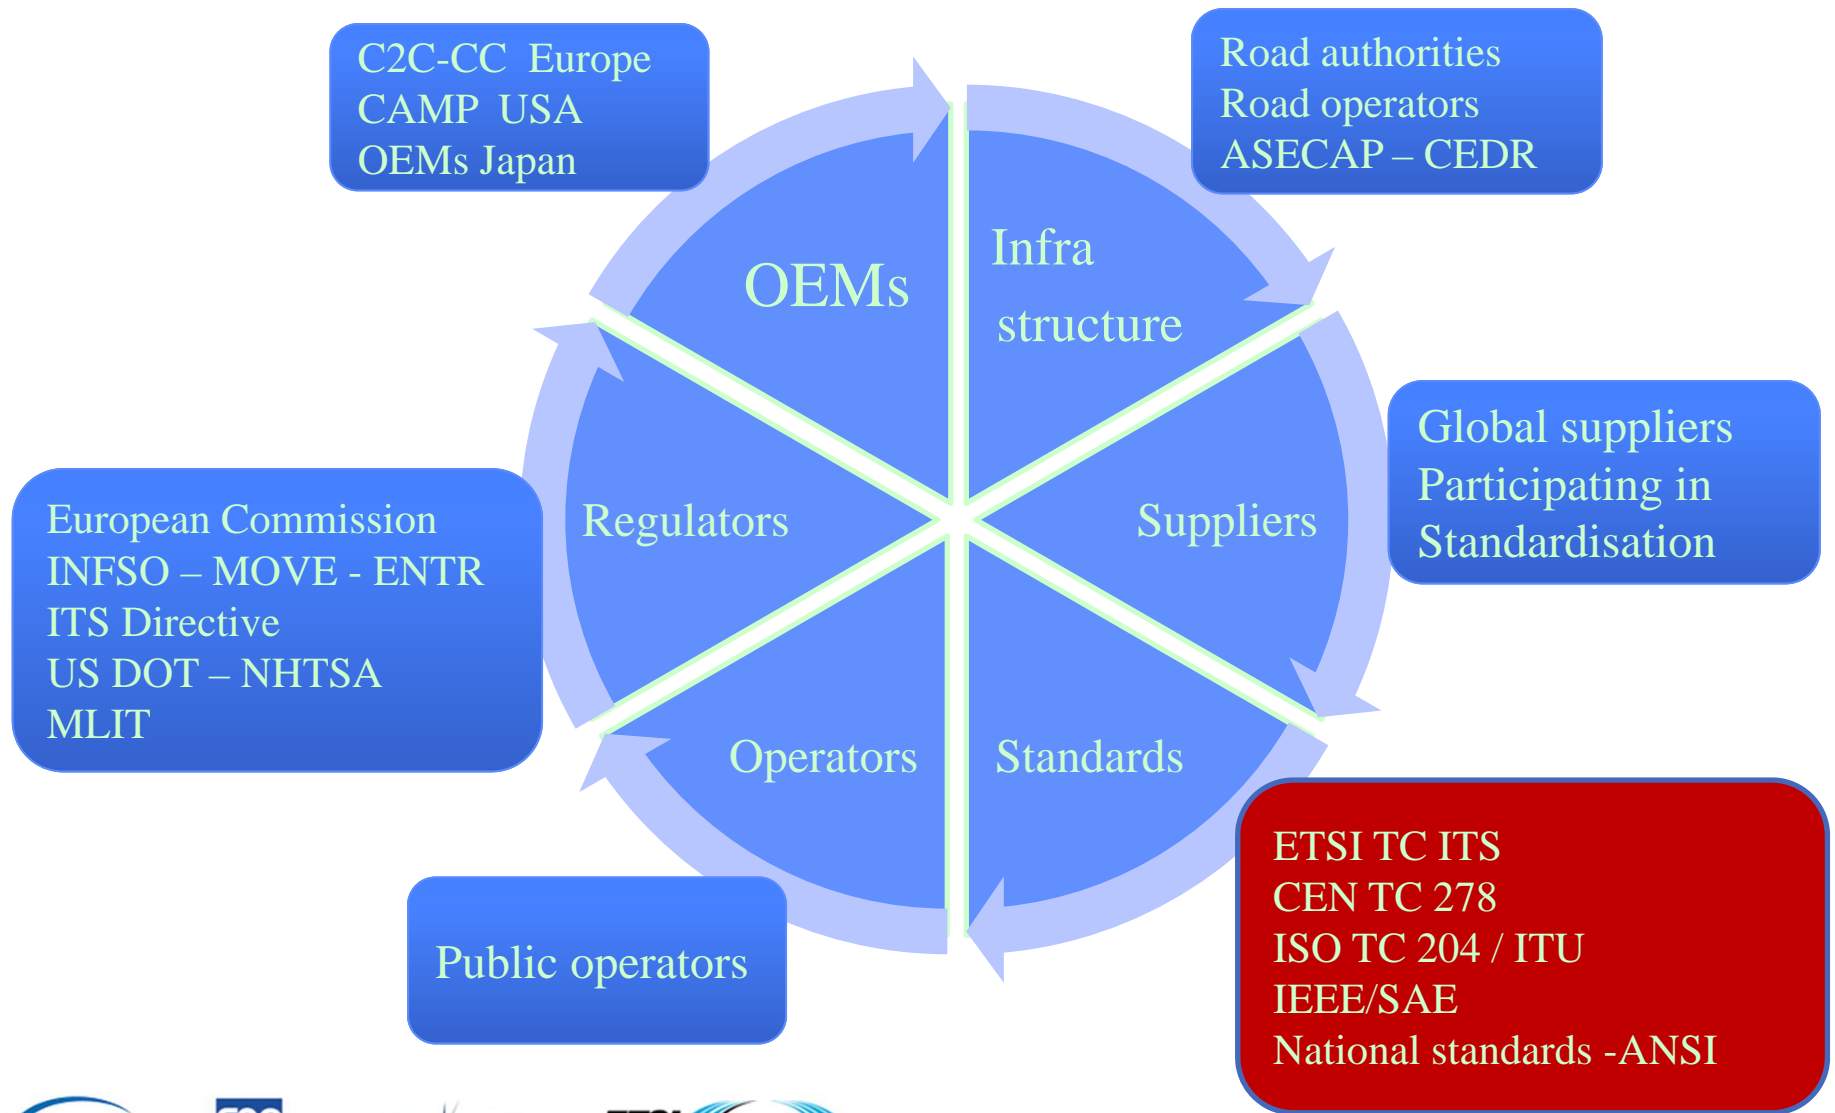

Presented by

Luis Jorge Romero Saro, Director General of ETSI

ANSI – ESO Conference: Transatlantic Standardization Partnerships
on E-Mobility/Electric Vehicles, Energy, and Security

October 12, 2011

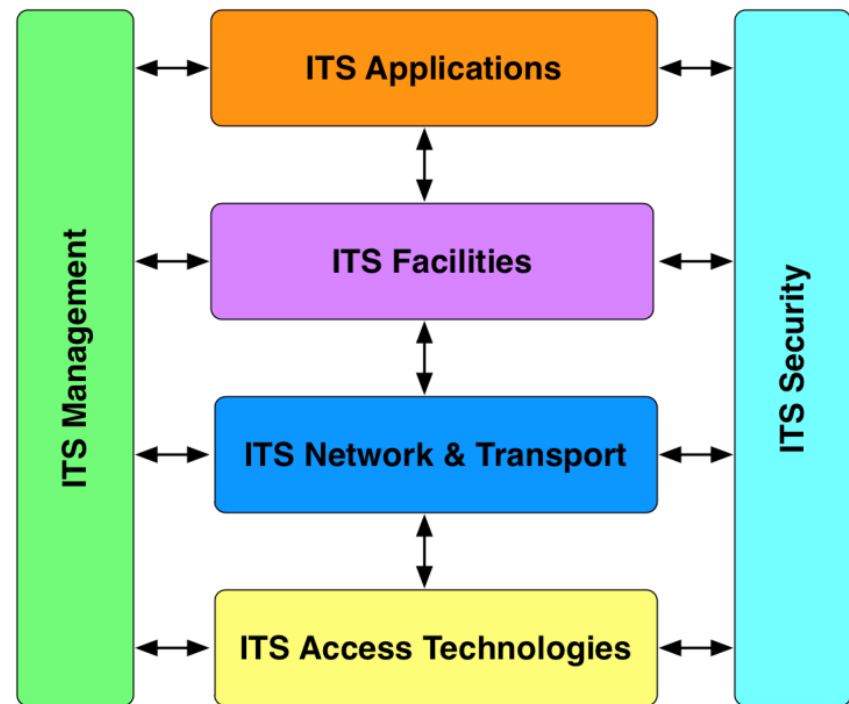

ITS Stakeholders

EC Mandate M/453 – split of responsibility

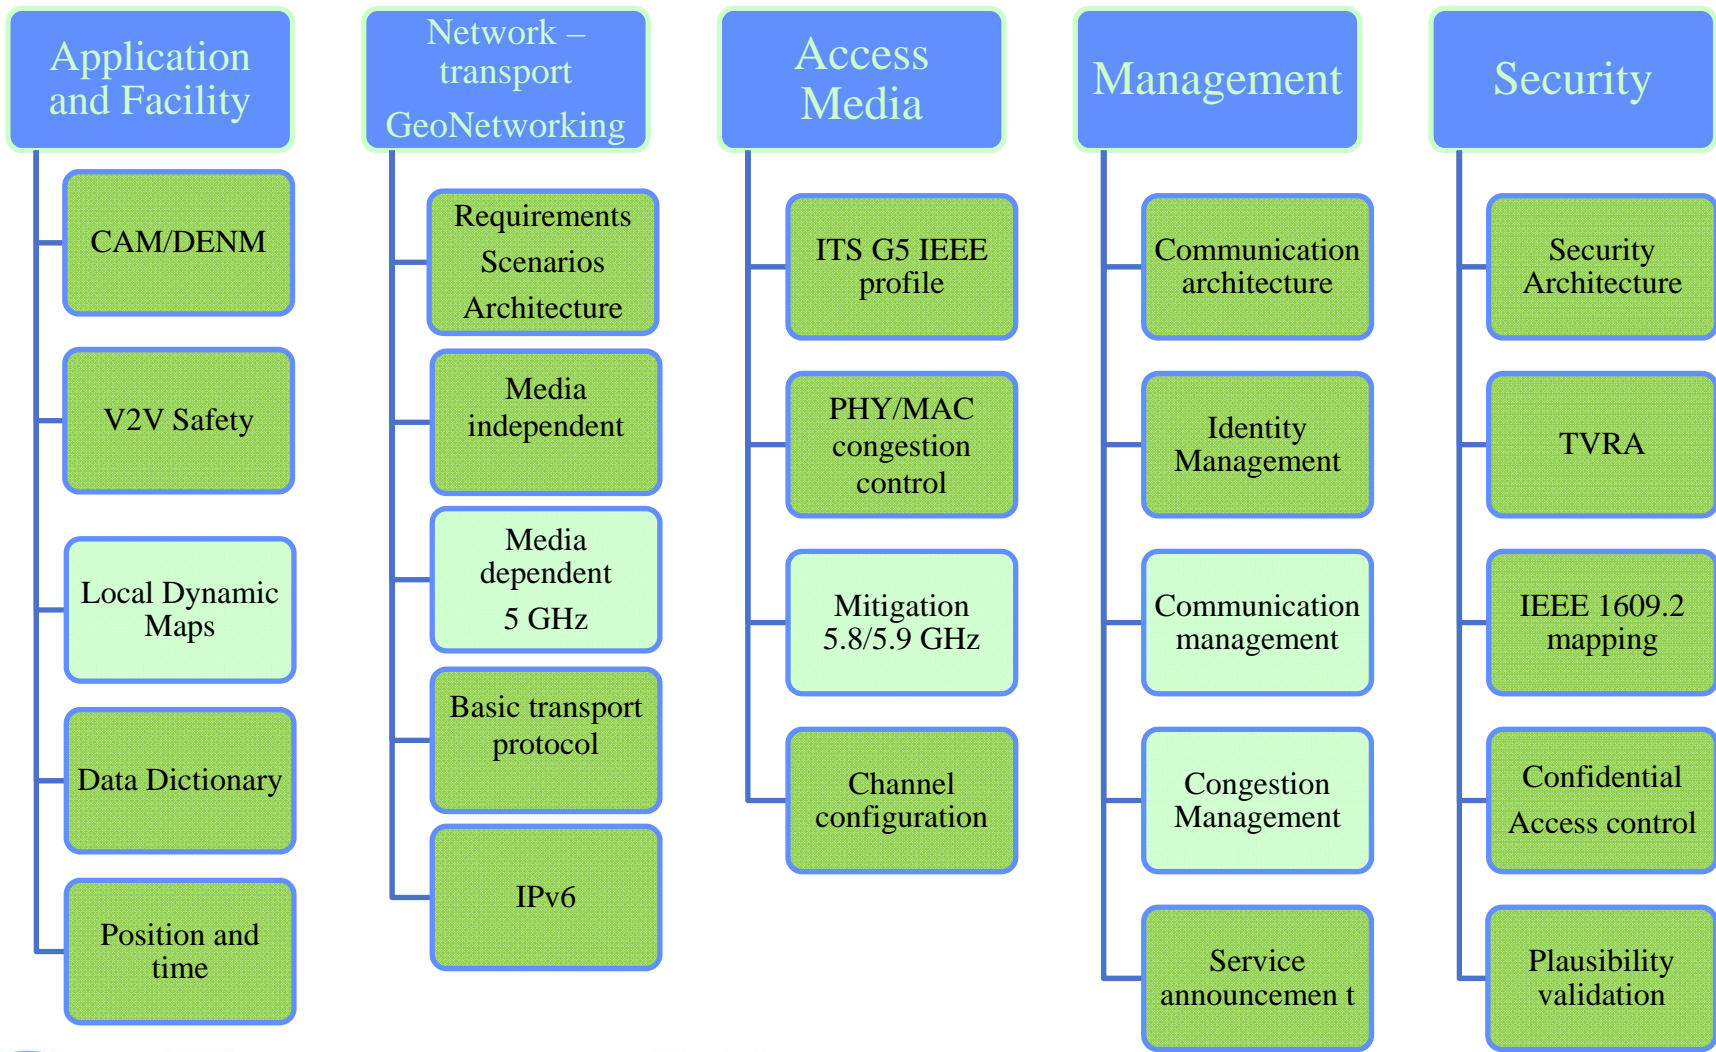

- CEN responsibility
 - Framework architecture
 - Infrastructure applications
 - Traffic management
 - Part of Facility layer standards

- ETSI responsibility
 - Communication architecture
 - V2V applications
 - Part of Facility layer standards
 - Network and transport layer
 - Access and Media layer
 - Management layer
 - Security layer
 - Conformance and interoperability tests

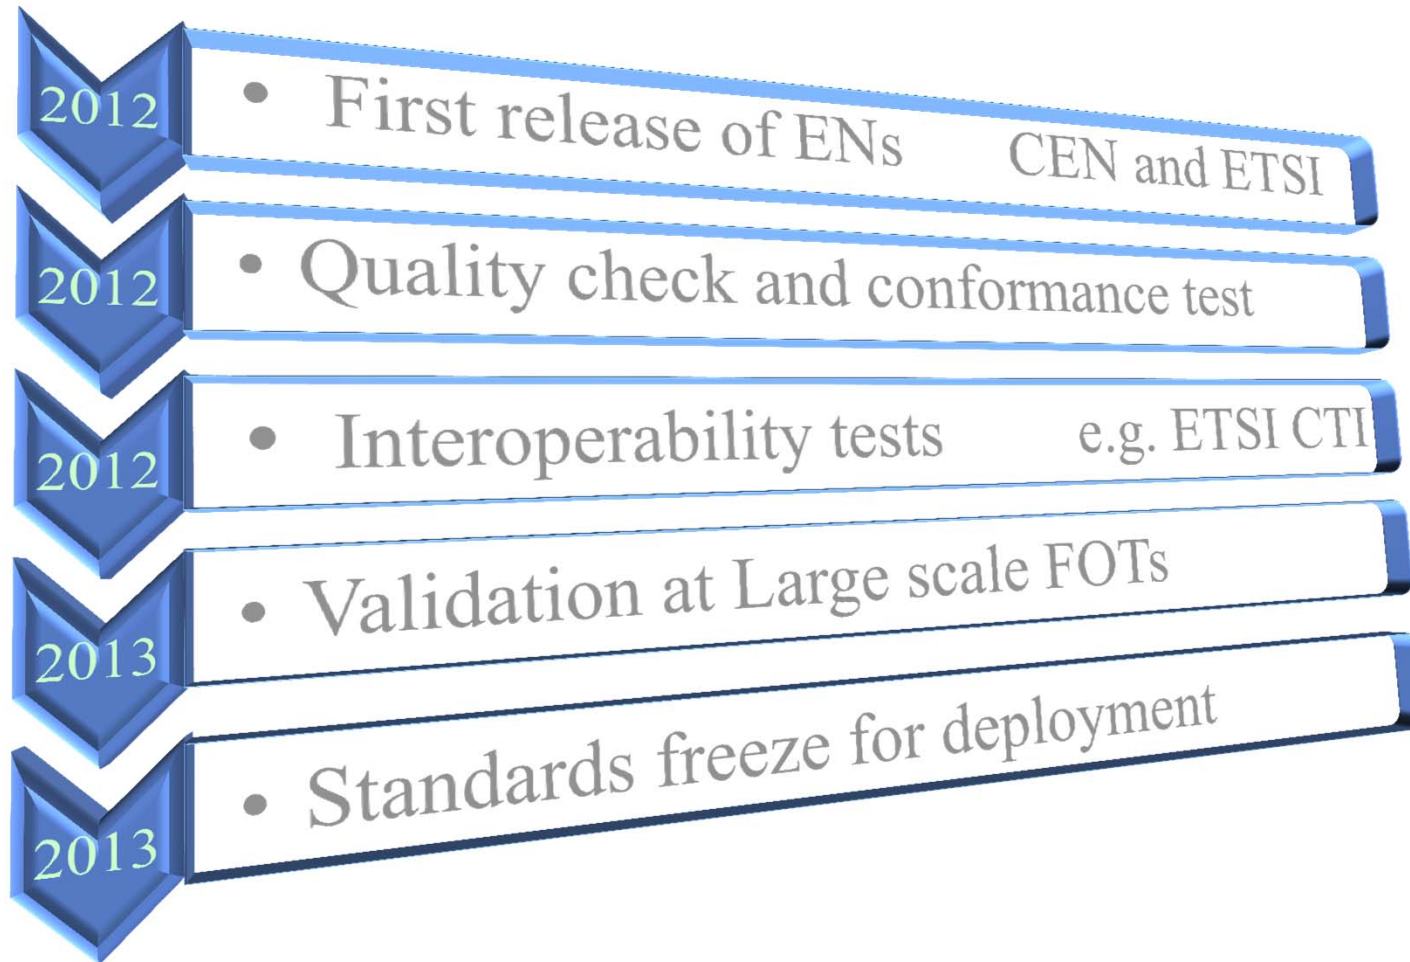

- Work under Mandate to be finalised mid 2012
- 60-70 EN standards to be provided
- ITS Coordination Group with the EC

ITS station architecture & standardization areas

Standards towards deployment – 2012-2013

EU – US – JP standards cooperation

High level declaration

European Commission – US.DOT - MLIT

Standards for deployment

ITS standardisation opportunities

- ❑ Adopt a set of standards based on a common communication architecture – To be finished in 2012
- ❑ Coordinate activities with international and national standards organisations – strong liaison activities
- ❑ Achieve common hardware for ITS deployment via standards – typical media and security standards
- ❑ Ensure global approach for deployment - but:
not too much and too late....

4th ETSI TC ITS workshop

7 – 9 February 2012

Doha, Qatar
