Joint Member Forum Overview

The 2018 ANSI Joint Member Forum, “Cutting-Edge Technologies Driving Real-World Solutions,” will explore concrete applications of two of the most transformative technologies propelling organizational/business advancement today: blockchain and artificial intelligence (AI). Expert panelists from a range of industries/sectors – including health care, ITC, transportation, shipping, food safety, and government – will share insights on real-world applications of these emerging technologies. And standardization leaders will offer perspectives on how standards and conformity assessment can help drive deployment and further innovation.

While serving as an integrated engagement opportunity for ANSI members across stakeholder groups (including standards developers, companies, trade associations, government agencies, consumer groups, and academia), the free Joint Member Forum is open to everyone with an interest in the real-world application of blockchain and AI technologies to meet their organizational goals. The intent is to bring together a highly diverse group of approximately 200 experts and participants to share unique perspectives and find common ground on these cross-cutting technological advancements.

An agenda is forthcoming.

Participants

All ANSI members are encouraged to attend and share their perspectives, insights, and expertise.
