

ANSI Accreditation Delivers Credibility

Demonstrate
your commitment
to quality

Build
confidence
in your carbon
accounting

Accreditation by the American National Standards Institute (ANSI) provides assurance of the credibility of those who validate and verify your greenhouse gas (GHG) projects or inventories.* Beyond meeting regulatory requirements, ANSI accreditation demonstrates to all stakeholders that a validation or verification provider's services are repeatedly scrutinized to assure consistency and reliability. ANSI strives to work with its peer accreditation bodies operating globally as well as the GHG program administrators themselves to better align and harmonize a stronger collective effort in reducing GHGs.

ANSI anticipates offering additional accreditation services soon in related areas such as carbon footprint of products, ecolabeling, and energy management systems.
