Good morning, everyone.

My name is Joe Bhatia, and I am president and CEO of the American National Standards Institute.

It is my pleasure to be here today, and I would like to thank you all for joining us in launching the U.S.–India Standards and Conformance Cooperation Program.

For those of you who are not familiar with ANSI, we are the coordinator of the U.S. private-sector led and public sector-supported voluntary consensus standards and conformity assessment system. The Institute’s activities cross all industry sectors from technology to services, and from consumer safety to protection of the environment.

ANSI speaks as the U.S. voice in standardization forums around the globe. Through our network of members, we represent the interests of more than 125,000 companies and 3.5 million professionals worldwide.

ANSI is pleased to partner with the U.S. Trade and Development Agency, the Confederation of Indian Industry, and the Bureau of Indian Standards to launch this exciting new program to support trade, investment, and technical exchange between the U.S. and India.

America’s trade relationship with India is healthy and growing.

Just listen to the numbers…

- Bilateral trade in merchandise goods has increased almost 400% in the last 15 years.

- In 2007 alone, U.S. exports to India totaled 14 billion dollars . . . And Indian exports to the U.S. totaled nearly 20 billion dollars.

In our fast-paced global economy, there is no question that standardization and trade are linked. Dozens of studies from the U.S. Department of Commerce and the World Trade Organization back up the statement with data.

In total, 80% of global commodity trade is impacted by standards and conformity assessment programs. This means roughly $11.2 trillion in 2007 alone. If we are not all on the same page, the international community – particularly industry – experiences a lot of duplicative effort and incurs a lot of unnecessary cost.
Time and again, we have seen that those who understand how to effectively influence and address standardization and compliance issues have the greatest success in the international marketplace.

Already, alliances between Indian and American firms are creating investment openings across industries. Several ANSI members—including IBM, Intel, Microsoft, GE and Boeing—have found their footing in the IT, services and manufacturing sectors. They are recognizing the economic promise in the Indian business environment.

Likewise, an increasing number of Indian companies are finding tremendous potential for trade and investment in the U.S. market. Examples include companies like Bharat Forge, Essar Group, HCL, Jet Airways, Mahindra, Tata Group, and Wockhardt. Together these companies represent a diverse array of industries: steel, airlines, pharmaceuticals, auto parts, healthcare, hotels, chemicals and information technology.

Standards are not limited to just technical specifications for manufactured products or safety codes. Internationally, the services sector is one of the fastest growing areas for standards development.

Why? Because services represent the largest and most dynamic segment of the world economy — in 2008, they accounted for more than 64% of the global gross domestic product.

And India’s trade in services has been growing even faster than merchandise trade. They are wisely capitalizing on a well-educated, highly skilled English-speaking workforce to become a major exporter of services.

Whether we are talking about IT, manufacturing, or services, the SCCP has been designed to facilitate trade and offer U.S. and Indian companies an additional path to success in a foreign market.

This program is built upon a strong foundation of collaboration and mutual understanding. In December 2007, ANSI, CII, and BIS came together to sign a Memorandum of Understanding (MoU), making a formal commitment to cooperation and the advancement of trade between the U.S. and India.

In short, we agreed to exchange information and best practices, and to make our collective resources available to those who need them.

In signing the MoU, we not only opened the door for increased collaboration among our three organizations . . . we also created an additional path for U.S. companies to success in the Indian market.

In order to be competitive and increase their overall productivity, U.S. companies doing business in India need more information and more dynamic resources. They need to learn more about government regulations, industry standards, and the measures required
to demonstrate compliance with them. The same is true for Indian companies going the
other way.

Through ANSI’s participation as a signatory of the MoU, U.S. companies can leverage
the Institute’s close ties to the Indian public and private sectors to get targeted
information. They can speak directly with the right people to ensure the success of their
business initiatives.

The SCCP, too, is focused primarily on the exchange of information. Together, ANSI,
USTDA, CII, and BIS are making a commitment to empower U.S. and Indian
stakeholders with the standards and conformity assessment information resources they
need.

Our program will consist of three main components:

- We will develop a directory of the mandatory and voluntary requirements for
  entering and competing in the U.S. market.

  A similar directory of Indian information will also be developed under a mirror
  program.

- We will convene a series of sector-specific workshops that will bring together
  industry and technical experts to address regulatory issues.

  The workshops will be co-sponsored by U.S. organizations, and will offer an
  excellent opportunity for U.S. and Indian organizations to participate in technical
  discussions.

- We will expand U.S. and Indian resources on StandardsPortal, an online resource
  that facilitates international trade by helping companies better understand the
  standards, regulatory, and conformance related technical requirements that they
  face around the world.

  We will be adding information on the standards and conformance systems in
  India, a guide to U.S. best practices, a directory of conformity assessment bodies
  in the U.S., and a directory of U.S. regulatory agencies.

Each of these components will be a critical piece of an overall information infrastructure
that supports and facilitates cooperation between U.S. and Indian stakeholders . . . from
individual organizations and companies to government agencies, ministries, and entire
industry sectors.

India has changed a lot in recent years. There is no denying that it is an economic
power—not just in Asia but worldwide.
Ever since I emigrated to the U.S. in 1964, I have routinely traveled back to India to visit family and friends as well as for business purposes. I have witnessed India’s growth firsthand, and I am proud that ANSI has joined in partnership with USTDA, CII, and BIS to launch this program.

I believe that the effectiveness of the SCCP will reach far past the completion of the program itself. The information we share and the relationships we form will continue to support Indo-U.S. trade facilitation today, tomorrow, and well into the future.

Thank you very much for your attention. I look forward to working with you to make this program a success.
