### Call for comment on proposals listed

This section solicits public comments on proposed draft new American National Standards, including the national adoption of ISO and IEC standards as American National Standards, and on proposals to revise, reaffirm or withdraw approval of existing American National Standards. A draft standard is listed in this section under the ANSI-accredited standards developer (ASD) that sponsors it and from whom a copy may be obtained. Comments in connection with a draft American National Standard must be submitted in writing to the ASD no later than the last day of the comment period specified herein. Such comments shall be specific to the section(s) of the standard under review and include sufficient detail so as to enable the reader to understand the commenter's position, concerns and suggested alternative language, if appropriate. Please note that the ANSI Executive Standards Council (ExSC) has determined that an ASD has the right to require that interested parties submit public review comments electronically.

### AIAA (American Institute of Aeronautics and Astronautics)

#### New Standards

- ★ BSR/AIAA S-123-200x, Adaptations and Conversions of CCSDS Space Link Extension Forward Communications Link Transmission Unit Transfer Service (new standard)

Describes adaptations and conversions of the existing CCSDS standard (Space Link Extension (SLE) Forward Communications Link Transmission Unit (FCLTU)) space vehicle command transfer service. Adaptations of FCLTU by the user and conversions of FCLTU by the provider provide standardized discrete and streaming ternary command services and streaming binary command services that are not otherwise provided by CCSDS SLE transfer services.

- ★ BSR/AIAA S-124-200x, Adaptations and Conversions of CCSDS Space Link Extension Return All Frames Transfer Service (new standard)

Describes adaptations and conversions of the existing CCSDS standard (Space Link Extension (SLE) Return All Frames (RAF)) space vehicle telemetry transfer service. Adaptations of RAF by the user and conversions of RAF by the provider provide standardized time-correlated telemetry and command echo services which are not otherwise provided by CCSDS SLE transfer services. Time-correlated telemetry service supports satellites which use unframed bit streams or bit streams without provider-side frame synchronization. Command echo service supports systems that require an independent check of provider RF equipment.

# Project Initiation Notification System (PINS)

ANSI Procedures require notification of ANSI by ANSI-accredited standards developers (ASD) of the initiation and scope of activities expected to result in new or revised American National Standards (ANS). Early notification of activity intended to reaffirm or withdraw an ANS and in some instances a PINS related to a national adoption is optional. The mechanism by which such notification is given is referred to as the PINS process. For additional information, see clause 2.4 of the ANSI Essential Requirements: Due Process Requirements for American National Standards.

Following is a list of proposed actions and new ANS that have been received recently from ASDs. Please also review the section in Standards Action entitled "American National Standards Maintained Under Continuous Maintenance" for additional or comparable information with regard to standards maintained under the continuous maintenance option. To view information about additional standards for which a PINS has been submitted and to search approved ANS, please visit [www.NSSN.org](http://www.NSSN.org), which is a database of standards information. Note that this database is not exhaustive.

As such, this recommendation does not specify the splicing method used or constraints applied to the streams being spliced, nor does it address constraints placed on splicing devices. This standard also supports accurate signaling of events in the stream.

# American National Standards Maintained Under Continuous Maintenance

The ANSI Essential Requirements: Due Process Requirements for American National Standards provide two options for the maintenance of American National Standards (ANS): periodic maintenance (see clause 4.7.1) and continuous maintenance (see clause 4.7.2). Continuous maintenance is defined as follows:

The standard shall be maintained by an accredited standards developer. A documented program for periodic publication of revisions shall be established by the standards developer. Processing of these revisions shall be in accordance with these procedures. The published standard shall include a clear statement of the intent to consider requests for change and information on the submittal of such requests. Procedures shall be established for timely, documented consensus action on each request for change and no portion of the standard shall be excluded from the revision process. In the event that no revisions are issued for a period of four years, action to reaffirm or withdraw the standard shall be taken in accordance with the procedures contained in the ANSI Essential Requirements.

The Executive Standards Council (ExSC) has determined that for standards maintained under the Continuous Maintenance option, separate PINS announcements are not required. The following ANSI Accredited Standards Developers have formally registered standards under the Continuous Maintenance option.

- AAMVA
- AGRSS, Inc
- ASC B109 (AGA)
- ASHRAE
- ASME
- ASTM
- MHI (ASC MH10)
- NCPDP
- NBBPVI
- NSF International
- TIA
- Underwriters Laboratories, Inc.

## **RATIONALE**

*Proposal submitted by Eugene Wirth, UL*

Based upon the comments and responses posted in the UL 183 Proposal Review Work Area for the proposals dated October 6, 2006, the following revision to the UL 183 proposal topic 2 is proposed.

UL proposes to add 10.10 to correlate with NEC 406.4(C), which requires that receptacles mounted on covers must be mounted by more than one screw or shall be evaluated for mounting with one screw. This requirement needs to be added to UL 183 to avoid a conflict with the NEC. The proposed wording aligns with the wording being proposed for UL 5, UL 209, and UL 884.

## **PROPOSAL**

10.10 Receptacles mounted to and supported by a cover shall be provided with more than one securement point for the receptacle.
