Call for comment on proposals listed

This section solicits public comments on proposed draft new American National Standards, including the national adoption of ISO and IEC standards as American National Standards, and on proposals to revise, reaffirm or withdraw approval of existing American National Standards. A draft standard is listed in this section under the ANSI-accredited standards developer (ASD) that sponsors it and from whom a copy may be obtained. Comments in connection with a draft American National Standard must be submitted in writing to the ASD no later than the last day of the comment period specified herein. Such comments shall be specific to the section(s) of the standard under review and include sufficient detail so as to enable the reader to understand the commenter's position, concerns and suggested alternative language, if appropriate. Please note that the ANSI Executive Standards Council (ExSC) has determined that an ASD has the right to require that interested parties submit public review comments electronically.

Ordering Instructions for "Call-for-Comment" Listings

By using this HL7 standard, disparate family history applications will be able to exchange an individual's family history as well as send it to an EHR system. The Pedigree Topic's static model has an optional reference to an elaborate representation of genetic data through the utilization of the Genotype Topic's models.

Project Initiation Notification System (PINS)

ANSI Procedures require notification of ANSI by ANSI-accredited standards developers (ASD) of the initiation and scope of activities expected to result in new or revised American National Standards (ANS). Early notification of activity intended to reaffirm or withdraw an ANS and in some instances a PINS related to a national adoption is optional. The mechanism by which such notification is given is referred to as the PINS process. For additional information, see clause 2.4 of the ANSI Essential Requirements: Due Process Requirements for American National Standards.

Following is a list of proposed actions and new ANS that have been received recently from ASDs. Please also review the section in Standards Action entitled "American National Standards Maintained Under Continuous Maintenance" for additional or comparable information with regard to standards maintained under the continuous maintenance option. To view information about additional standards for which a PINS has been submitted and to search approved ANS, please visit www.NSSN.org, which is a database of standards information. Note that this database is not exhaustive.

Directly and materially affected interests wishing to receive more information or to submit comments are requested to contact the standards developer directly within 30 days of the publication of this announcement.

BSR/BOMA Z65.2-200x, Standard Methods for Measuring Floor Area in Industrial Buildings
(new standard)

Stakeholders: Building owners, industrial and office realtors, building managers, facilities managers.

Project Need: In the late 1990s, the real estate industry recognized the need for a standard that fairly accounts and allocates floor area in industrial buildings. This project will fulfill this vital need for the real estate industry.

The completed standard will be used to measure floor area on both existing and new industrial buildings. The standard will allow comparison of values on the basis of generally agreed upon methods of measurement for industrial buildings. The standard will take a building-wide approach to measurement, fairly accounting for the allocation of space that benefit all tenants while providing a common basis for the measurement of floor area in a tenant area.

BSR/CSA LC 7-200x, Pipe Joint Sealing Compounds and Materials
(new standard)

Stakeholders: Users, manufacturers, gas suppliers and certifying agencies.

Project Need: To create new standard for safety for pipe joint sealing compounds.

Details test and examination criteria for pipe joint sealing compounds including paste, semi-liquid or liquid type, and polymeric tape intended for sealing threaded joints on metal piping having NPT-tapered threads.

BSR/INCITS Project 1860-D-200x, Information technology - Application Profile - Interoperability and Data Interchange - Biometrics for E-Authentication (new standard)

Stakeholders: Biometrics in authentication applications.

Project Need: To create biometric application profile standards that define a set of base standards and the criteria for applying those standards in applications of biometrics for e-authentication.

Supports the deployment of biometric technologies in e-authentication applications. The proposed standard's goals are interoperability, data interchange, and security for e-authentication systems based on a variety of authentication architectural configurations with differing storage, matching and transmission characteristics.

BSR/INCITS Project 1861-D-200x, Information technology - Fibre Channel - Framing and Signaling - 3 (FC-FS-3) (new standard)

Stakeholders: Fibre channel and network markets.

Project Need: To describe any changes needed to Fibre Channel Framing and Signaling owing to changes to speed, new upper level protocols, and new functions.

This project proposal recommends the development of a set of technical additions and clarifications to ANSI INCITS 424:2006, Fibre Channel - Framing and Signaling - 2 (FC-FS-2). Included within this scope are such functions as:

- (a) Inclusion of FC-FS-2-A!;
- (b) Enhancements to support new physical layer technologies;
- (c) Enhancements to support Inter-Fabric Routing;
- (d) Clarification of BB_Credit Recovery; and
- (e) Any other item as deemed necessary during the development.

American National Standards Maintained Under Continuous Maintenance

The ANSI Essential Requirements: Due Process Requirements for American National Standards provide two options for the maintenance of American National Standards (ANS): periodic maintenance (see clause 4.7.1) and continuous maintenance (see clause 4.7.2). Continuous maintenance is defined as follows:

The standard shall be maintained by an accredited standards developer. A documented program for periodic publication of revisions shall be established by the standards developer. Processing of these revisions shall be in accordance with these procedures. The published standard shall include a clear statement of the intent to consider requests for change and information on the submittal of such requests. Procedures shall be established for timely, documented consensus action on each request for change and no portion of the standard shall be excluded from the revision process. In the event that no revisions are issued for a period of four years, action to reaffirm or withdraw the standard shall be taken in accordance with the procedures contained in the ANSI Essential Requirements.

The Executive Standards Council (ExSC) has determined that for standards maintained under the Continuous Maintenance option, separate PINS announcements are not required. The following ANSI Accredited Standards Developers have formally registered standards under the Continuous Maintenance option.

- AAMVA
- AGRSS, Inc
- ASC B109 (AGA)
- ASHRAE
- ASME
- ASTM
- MHI (ASC MH10)
- NCPDP
- NBBPVI
- NSF International
- TIA
- Underwriters Laboratories, Inc.

ISO/IEC DGuide 76 – Development of service standards – Recommendations for addressing consumer issues

Comment Deadline: June 30, 2007

The following is the scope of Draft ISO/IEC Guide 76

This Guide provides general guidance on the issues to be considered in standards for services. From this guidance, detailed standards may be prepared for any service. It offers a checklist (Clause 9) which may be used by consumer representatives and others participating in the process of standards development. Use of the checklist enables full consideration to be given to all matters of consumer interest, including the needs of children, older persons, persons with disabilities and those from different ethnic and cultural heritages.

This Guide is relevant to the full range of services, whether or not a formal contract is entered into or purchase price paid, but also has relevance for public or charitable services in which there is a consumer, user or participant but not necessarily a purchase, for example, education, health and care provision.

A copy of Guide 76 can be obtained for review by contacting Henrietta Scully of ANSI via e-mail, hscully@ansi.org. Comments must be sent to Steven Cornish of ANSI (scornish@ansi.org) by June 30, 2007.

PROPOSAL

Table 36.1

Maximum acceptable temperature rises

Materials and components			Degrees	
			C	F
<u>19A.</u>	<u>Class 240(S) insulation systems on coils of power transformers and motor transformers⁹:</u>			
		<u>Thermocouple method</u>	<u>170</u>	<u>306</u>
