This section solicits public comments on proposed draft new American National Standards, including the national adoption of ISO and IEC standards as American National Standards, and on proposals to revise, reaffirm or withdraw approval of existing American National Standards. A draft standard is listed in this section under the ANSI-accredited standards developer (ASD) that sponsors it and from whom a copy may be obtained. Comments in connection with a draft American National Standard must be submitted in writing to the ASD no later than the last day of the comment period specified herein. Such comments shall be specific to the section(s) of the standard under review and include sufficient detail so as to enable the reader to understand the commenter’s position, concerns and suggested alternative language, if appropriate. Please note that the ANSI Executive Standards Council (ExSC) has determined that an ASD has the right to require that interested parties submit public review comments electronically, in accordance with the developer’s procedures.

Ordering Instructions for “Call-for-Comment” Listings
1. Order from the organization indicated for the specific proposal.
2. Use the full identification in your order, including the BSR prefix; for example, Electric Fuses BSR/SAE J554.
3. Include remittance with all orders.
4. BSR proposals will not be available after the deadline of call for comment.

Comments should be addressed to the organization indicated, with a copy to the Board of Standards Review, American National Standards Institute, 25 West 43rd Street, New York, NY 10036. Fax: 212-840-2298; e-mail: psa@ansi.org
Comment Deadline: November 22, 2009

**NECA (National Electrical Contractors Association)**

**Revisions**

BSR/NECA 408-201x, Standard for Installing and Maintaining Busways (revision of ANSI/NECA 408-2002)

Describes the installation and maintenance procedures for feeder and plug-in busways and accessories rated 600 Volts AC or less, and 100 Amperes or more. This standard also covers periodic routine maintenance procedures for busway, and special procedures used after adverse operating conditions such as a short-circuit, ground-fault, or immersion in water.

[Click here to see these changes in full, or look at the end of "Standards Action."]

Send comments (with copy to BSR) to: am2@necanet.org

BSR/NECA 409-201x, Standard for Installing and Maintaining Dry-Type Transformers (revision of ANSI/NECA 409-2002)

Describes the installation and maintenance procedures for single- and three-phase general purpose dry-type distribution and power transformers and associated accessories rated 600 Volts AC or less, and 0.25 kVA or more.

[Click here to see these changes in full, or look at the end of "Standards Action."]

**NEMA (National Electrical Manufacturers Association)**

**Revisions**

BSR/NEMA OS 1-201x, Sheet-Steel Outlet Boxes, Device Boxes, Covers, and Box Supports (revision of ANSI/NEMA OS 1-2008)

Covers general-purpose metal outlet boxes, device boxes, covers, and supports designed to facilitate the pulling of wires, to protect and facilitate wiring splices and taps, to provide a means of mounting and protecting wiring devices, and to provide a connection for rigid conduit, electrical metallic tubing, armored cable, metal clad cable, nonmetallic sheathed cable, flexible metallic conduit and knob-and-tube wiring systems.

[Click here to see these changes in full, or look at the end of "Standards Action."]

Send comments (with copy to BSR) to: Michael Leibowitz, (703) 841-3264, mik_leibowitz@nema.org

**NSF (NSF International)**

**Revisions**

BSR/NSF 14-201x (i29), Plastics piping system components and related materials (revision of ANSI/NSF 14-2008)

Issue 29 - Add dezincification and resistance to stress corrosion requirements in ANSI/NSF 14 with the addition of a new section, Section 5.8.

[Click here to see these changes in full, or look at the end of "Standards Action."]

Send comments (with copy to BSR) to: Adrienne O'Day, (734) 827-5676, oday@nsf.org

Comment Deadline: December 7, 2009

**AIHA (ASC Z88) (American Industrial Hygiene Association)**

**Revisions**

BSR AIHA Z88.7-201x, Color Coding of Air-Purifying Respirator Canisters, Cartridges, and Filters (revision of ANSI Z88.7-2001)

Establishes a system of marking air-purifying respirator canisters, cartridges and filter containers by means of colors in order to:

1. Facilitate rapid identification of the canisters, cartridges, and filters by users; and
2. Ensure color consistency among respirator manufacturers.

ASME (American Society of Mechanical Engineers)

Revisions

BSR/ASME B31.8S-201x, Managing System Integrity of Gas Pipelines (revision of ANSI/ASME B31.8S-2004)

Applies to onshore pipeline systems constructed with ferrous materials and that transport gas. Pipeline system means all parts of physical facilities through which gas is transported, including pipe, valves, appurtenances attached to pipe, compressor units, metering stations, regulator stations, delivery stations, holders, and fabricated assemblies. The principles and processes embodied in integrity management are applicable to all pipeline systems.

BSR/ASME BPVC Section I-201x, Rules for Construction of Power Boilers (5/14/09 Meeting) (revision of ANSI/ASME BPVC 2007 Edition)

Section I of the ASME Boiler and Pressure Vessel Code provides requirements for all methods of construction of power, electric, and miniature boilers; high temperature water boilers used in stationary service; and power boilers used in locomotive, portable, and traction service. Rules pertaining to use of the V, A, M, PP, S and E Code symbol stamps are also included. The rules are applicable to boilers in which steam or other vapor is generated at a pressures exceeding 15 psig, and high temperature water boilers intended for operation at pressures exceeding 160 psig and/or temperatures exceeding 250 degree F. Superheaters, economizers, and other pressure parts connected directly to the boiler without intervening valves are considered as part of the scope of Section I.

Correction

Incorrect Abstract

BSR/ASME HST-4

The abstract in the October 16, 2009 issue of Standards Action was printed in error. The correct abstract is:

This Standard establishes performance requirements for electric wire rope hoists for vertical lifting service involving material handling of freely suspended (unguided) loads using wire rope with one of the following types of suspension: (1) lug; (2) hook; (3) trolley; (4) base or deck mounted (does not include base-mounted drum hoists of the type covered by ASME B30.7); (5) wall or ceiling mounted (does not include base mounted drum hoists of the type covered by ASME B30.7). This Standard is applicable to hoists manufactured after the date on which this Standard is issued. This Standard is not applicable to: (1) damaged or malfunctioning hoists; (2) hoists that have been misused or abused; (3) hoists that have been altered without authorization of the manufacturer or a qualified person; (4) hoists used for the purpose of drawing both the load and the hoist up or down the hoist's own wire rope; (5) hoists used for marine and other applications as required by the Department of Defense (DOD).
The addresses listed in this section are to be used in conjunction with standards listed in Call for Comment. This section is a list of developers who have submitted standards for public review in this issue of Standards Action – it is not intended to be a list of all ANSI developers. Please send all address corrections to: Standards Action Editor, American National Standards Institute, 25 West 43rd Street, New York, NY 10036 or standact@ansi.org.

BSR/UL 1081-201x, Standard for Safety for Swimming Pool Pumps, Filters, and Chlorinators (Proposal dated 10-23-09) (revision of ANSI/UL 1081-2009a)

Call for Members (ANS Consensus Bodies)
UL Standards Committees STP 231, STP 466, STP 1594, and STP 61496

**STP 231** seeks to broaden its membership base and is recruiting new participants in the following interest categories:
Commercial / Industrial User, Consumer, General, Government, Supply Chain
STP 231 covers UL 231, the Standard for Safety for Power Outlets

**STP 466** seeks to broaden its membership base and is recruiting new participants in the following interest categories:
AHJ, Commercial / Industrial User, Consumer, General Interest, Government, Supply Chain, Testing & Standards
STP 466 covers UL 466, the Standard for Safety for Electric Scales and Accessories

**STP 1594** seeks to broaden its membership base and is recruiting new participants in the following interest categories:
AHJ, Commercial / Industrial Users, Consumer, General Interest, Government, Supply Chain, Testing & Standards
STP 1594 covers UL 1594, the Standard for Safety for Sewing and Cutting Machines

**STP 61496** seeks to broaden its membership base and is recruiting new participants in the following interest categories:
AHJ, Commercial / Industrial User, General Interest, Government, Supply Chain, Testing & Standards

Information concerning the application process may contact:
Linda Phinney
UL (Underwriters Laboratories, Inc.)
455 E Trimble Road
San Jose, CA 95131-1230
E-mail: Linda.L.Phinney@us.ul.com
Phone: (408) 754-6684
Fax: (408) 689-6684
Call for Members (ANS Consensus Bodies)
UL Standards Committees STP 2024 and STP 651

**STP 2024**, Optical Fiber Cable Raceway, seeks to broaden its membership base and is recruiting new participants in the following interest categories: AHJ, General, Supply Chain, Testing and Standards.

STP 2024 covers the Standard for Safety for Optical Fiber and Communication Cable Raceway, UL 2024.

**STP 651**, Rigid Nonmetallic Conduit and Fittings, seeks to broaden its membership base and is recruiting new participants in the following interest categories: AHJ, General, Supply Chain

STP 651 covers the following standards:
- UL 651, the Standard for Safety for Schedule 40 and 80 Rigid PVC Conduit and Fittings;
- UL 651A, the Standard for Safety for Type EB and A Rigid PVC Conduit and HDPE Conduit;
- UL 651B, the Standard for Safety for Continuous Length HDPE Conduit;
- UL 1684A, the Standard for Safety for Supplemental Requirements for Extra Heavy Wall Reinforced Thermosetting Resin Conduit (RTRC) and Fittings
- UL 1990, the Standard for Safety for Nonmetallic Underground Conduit with Conductors
- UL 2420, the Standard for Safety for Belowground Reinforced Thermosetting Resin Conduit (RTRC) and Fittings
- UL 2515, the Standard for Safety for Aboveground Reinforced Thermosetting Resin Conduit (RTRC) and Fittings

For information regarding the application process, please contact:
Paul Lloret
Underwriters Laboratories Inc. (UL)
455 E Trimble Road
San Jose, CA 95131
E-mail: paul.e.lloret@us.ul.com
Phone: (408) 754-6618
Final actions on American National Standards

The standards actions listed below have been approved by the ANSI Board of Standards Review (BSR) or by an ANSI-Audited Designator, as applicable.

**ALI (Automotive Lift Institute)**

**Revisions**

**CEA (Consumer Electronics Association)**

**Withdrawals**

**IEEE (ASC C63) (Institute of Electrical and Electronics Engineers)**

**New Standards**

ANSI C63.2-2009, Electromagnetic Noise and Field Strength Instrumentation, 10Hz - 40 GHz Specifications (new standard): 10/20/2009

**ITI (INCITS) (InterNational Committee for Information Technology Standards)**

**New National Adoptions**

**New Standards**

**Withdrawals**

**NFSI (National Floor Safety Institute)**

**New Standards**

**UL (Underwriters Laboratories, Inc.)**

**Revisions**

Directly and materially affected interests wishing to receive more information or to submit comments are requested to contact the standards developer directly within 30 days of the publication of this announcement.
BSR/ABYC H-22-201x, Electric Bilge Pump Systems (new standard)
Stakeholders: Boat manufacturers, insurance personnel, trade organizations, consumers.
Project Need: To identify the safety issues with electric bilge pump systems.
Provides a guide for the design, construction, installation, operation, and control of electric bilge pump systems.

BSR/ABYC H-30-201x, Hydraulic Systems (new standard)
Stakeholders: Boat manufacturers, insurance personnel, trade organizations, consumers.
Project Need: To identify safety issues with hydraulic systems.
Provides a guide for the design, construction, installation, operation, and control of hydraulic components used to transmit force.

BSR/ABYC H-35-201x, Powering and Load Capacity of Pontoon Boats (new standard)
Stakeholders: Boat manufacturers, insurance personnel, trade organizations, consumers.
Project Need: To identify safety issues with pontoon boats.
Provides a guide for determining powering and load capacity of pontoon boats.

Stakeholders: Cold-formed steel industry.
Project Need: Using new research findings, to update and improve the current standard.
Provides supplemental information for determining member and connection strengths of cold-formed carbon and low-alloy steels.
Provides supplemental information for determining resistance factors of cold-formed carbon and low alloy steel members and connections via tests. This Supplement 2 to AISI S100-07 replaces Supplement 1 to AISI S100-07 and is applicable to the United States, Canada, and Mexico.

BSR X9.79 Part 3 and Part 4-201x, Public Key Infrastructure (PKI) - Part 3: Certificate Management and Part 4: Certificate Extensions (new standard)
Stakeholders: Financial institutions, service providers, product providers, end-users, security assessors.
Project Need: The expansion of X9.79 with Parts 3 and 4 consolidates PKI management and security requirements into a single American National Standard.
Addresses the necessary revision of two withdrawn American National Standards (X9.57 and X9.55) and the unacceptability of an international standard (ISO 15782) into an existing American National Standard (X9.79). X9.57-1997, Certificate Management, was internationalized as ISO 15782, Certificate management for financial services - Part 1: Public key certificates. However, the X9F4 working group has determined that the USA cannot adopt ISO 15782-1 due to the numerous inconsistencies with USA practices including the removal of certificate revocations.

BSR/ASME B18.6.3-201x, Machine Screw and Tapping Screw Nuts (Inch Series) (revision, redesignation and consolidation of ANSI/ASME B18.6.3-2003 (R2008) and ANSI/ASME B18.6.4-2009)
Stakeholders: Users, distributors, and manufacturers.
Project Need: To revise and consolidate ASME B18.6.3 and ASME B18.6.4, and add information on Type VI recess (TORX®, 6 Lobe) dimensions and the gaging information in the Appendix. It will also add thread rolling screws, Type TRS to the tapping screw types.
Covers the complete general and dimensional data for the various types of slotted and recessed head machine screws, tapping screws, metallic drive screws, and machine screw nuts recognized as the American National Standard.

BSR ASSE Z15.2-201x, Safe Practices for Off-Road Vehicle Operations (new standard)
Stakeholders: SH&E professionals working with offroad vehicles.
Project Need: To revise the standard based upon the consensus of Accredited Standards Committee Z15.
Sets forth practices for the safe operation of off-road vehicle operations. This standard does not address vehicles being used for non-work-related purposes.
BSR/IEEE 802.1Qbe-200x, Local and Metropolitan Area Networks - Virtual Bridged Local Area Networks Amendment: Multiple Backbone Service Instance Identifier (I-SID) Registration Protocol (MIRP) (addenda to ANSI/IEEE 802.1Q-2006)

Stakeholders: Vendors, users, administrators, designers, customers, and owners of provider backbone bridged networks.

Project Need: The deployment of IEEE Provider Backbone Bridged Networks, including tagged connections between these networks, has raised requirements for both signaling among Provider Edge Bridges the need to forget MAC addresses, and for extending the capabilities of MRP to backbone service identifiers.

Provides protocols, procedures, and managed objects to support topology change signaling to alter the binding (held in an I-Component) of customer addresses to Backbone addresses on a per-Backbone Service Instance Identifier (I-SID) basis. This is accomplished by extending the use of the Multiple Registration Protocol (MRP).

BSR/IEEE 802.1Qbf-200x, Local and Metropolitan Area Networks - Virtual Bridged Local Area Networks Amendment: Multiple Backbone Bridge Traffic Engineering (PBB-TE) Infrastructure Segment Protection (addenda to ANSI/IEEE 802.1Q-2006)

Stakeholders: Vendors, users, administrators, designers, customers, and owners of traffic-engineered bridged networks.

Project Need: To describe a simple localized protection capability, which would strengthen the applicability of PBB-TE networks.

Provides procedures and managed objects to provide 1:1 (M:1 if practical) protection switching, without modifying data or control frames and using connectivity fault management (CFM), for a group of Traffic Engineered Service Instances (TESIs) that traverses a sequence of local area networks (LANs) and intervening bridges. Operator requests and operational modes consistent with those supported by PBB-TE TESI Protection are specified.

Stakeholders: Software engineers.

Project Need: To define systematic reviews applicable to software acquisition, supply, development, operation, and maintenance. This standard describes how to carry out a review.

Provides minimum acceptable requirements for systematic software reviews, where “systematic” includes the following attributes: Team participation, documented results of the review, and documented procedures for conducting the review.

Stakeholders: Commercial, industrial, military, medical, environmental, manufacturing, universities, laboratories.

Project Need: To identify ADC error sources and provide test methods with which to perform the required error measurements.

Provides common terminology and test methods for the testing and evaluation of analog-to-digital converters (ADCs).
BSR/IEEE 1413-200x, Standard Methodology for Reliability Prediction and Assessment for Electronic Systems and Equipment (new standard)
Stakeholders: Consumer, industrial, computer, medical, telecommunication, defense, automotive, aerospace.
Project Need: To provide an approach for developing reliability predictions for electronic systems and equipment which will emphasize the physical-of-failure approach.
Covers the framework for the reliability prediction process for electronic systems and equipment at all levels.

Stakeholders: Designers, developers, and vendors of learning management systems.
Project Need: To unify the specifications and standards for resource aggregations that were created by different communities, such as the multimedia community, the library community, the technical documentation community, and the learning technology community.
Specifies how the elements and attributes defined in the Metadata Encoding and Transmission Standard (METS) relate to the components of the conceptual model for resource aggregation defined in IEEE Std 1484.13.1.

Stakeholders: Designers, developers, and vendors of learning management systems.
Project Need: To unify the specifications and standards for resource aggregations that were created by different communities, such as the multimedia community, the library community, the technical documentation community, and the learning technology community.

BSR/IEEE 1484.13.4-201x, Recommended Practice for Learning Technology - IMS Content Packaging Information Model (CP) Version 1.2 - Mapping to the Conceptual Model for Resource Aggregation (new standard)
Stakeholders: Designers, developers, and vendors of learning management systems.
Project Need: To unify the specifications and standards for resource aggregations that were created by different communities, such as the multimedia community, the library community, the technical documentation community, and the learning technology community.
Specifies how the elements and attributes defined in the IMS Content Packaging Information Model (CP) Version 1.2 relate to the components of the conceptual model for resource aggregation defined in IEEE Std 1484.13.1.

BSR/IEEE 1484.13.5-201x, Recommended Practice for Learning Technology - IETF RFC 4287 - Atom Syndication Format - Mapping to the Conceptual Model for Resource Aggregation (new standard)
Stakeholders: Designers, developers, and vendors of learning management systems.
Project Need: To unify the specifications and standards for resource aggregations that were created by different communities, such as the multimedia community, the library community, the technical documentation community, and the learning technology community.
Specifies how the elements and attributes defined in Atom Syndication Format (Atom) relate to the components of the conceptual model for resource aggregation defined in IEEE Std 1484.13.1.

BSR/IEEE 1484.13.6-201x, Recommended Practice for Learning Technology - Open Archives Initiative Object Reuse and Exchange Abstract Model (OAI-ORE) - Mapping to the Conceptual Model for Resource Aggregation (new standard)
Stakeholders: Designers, developers, and vendors of learning management systems.
Project Need: To unify the specifications and standards for resource aggregations that were created by different communities, such as the multimedia community, the library community, the technical documentation community, and the learning technology community.
Specifies how the elements and attributes defined in the Open Archives Initiative Object Reuse and Exchange (OAI-ORE) Abstract Model and expressed in the OAI-ORE Resource Map Implementation in RDF/XML relate to the components of the conceptual model for resource aggregation defined in IEEE Std 1484.13.1.

Stakeholders: Specifiers, designers, testers, and users.
Project Need: The History annex is a response to questions as to the reason for the required transient tests. The testing QA is intended as an aid those new to these test requirements.
Adds a definition, a requirement to dc power supplies, and two Informative Annexes.

BSR/IEEE 1619.1-200x, Standard Architecture for Encrypted Variable Block Storage Media (new standard)
Stakeholders: Users of removable storage.
Project Need: To address the security qualities and interoperability of encrypted tape systems.
Specifies the architecture for protection-use-data in Variable Block storage devices, describing the methods, algorithm(s), and modes of data protection to be used.

BSR/IEEE 1668-201x, Recommended Practice for Voltage Sag and Interruption Ride-Through Testing for End Use Electrical Equipment Less than 1,000 Volts (new standard)
Stakeholders: All categories of equipment manufacturers for voltage applications below 1000Vac.
Project Need: To create a standardized methodology to test electronic equipment and understand is susceptibility to AC voltage variations.
Defines minimum voltage sag immunity requirements based on actual voltage sag data. This document is a non-industry-specific recommended practice for voltage sag ride-through performance and compliance testing for all electrical and electronic equipment connected to low-voltage power systems that can experience malfunction or shutdown as a result of reductions in supply voltage lasting less than one minute.

BSR/IEEE 1680.2-201x, Standard for Environmental Assessment of Imaging Equipment (new standard)
Stakeholders: Imaging equipment manufacturers; suppliers of materials, equipment, and packaging.
Project Need: IEEE 1680.2 will consist of environmental criteria and other materials that relate specifically to imaging equipment products. The August 2007 EPEAT Standards Development Roadmap identified imaging equipment as a high priority for standard development, based on extensive input from stakeholders.
Defines environmental performance standards for imaging equipment (as defined by the U.S. ENERGY STAR Imaging Equipment Specification) including copiers, digital duplicators, facsimile machines, multifunction devices, printers, mailing machines and scanners, relating to reduction or elimination of environmentally sensitive materials, materials selection, design for end of life, lifecycle extension, energy conservation, end of life management, corporate performance, and packaging.
BSR/IEEE 1680.3-201x, Standard for Environmental Assessment of Televisions (new standard)

Stakeholders: Television manufacturers; suppliers of materials, equipment, and packaging.

Project Need: IEEE 1680.3 will consist of environmental criteria and other materials that relate specifically to television products. The August 2007 EPEAT Standards Development Roadmap identified televisions as a high priority for standard development, based on extensive input from stakeholders.

Defines environmental performance for televisions, television combination units, and component television units, relating to reduction or elimination of environmentally sensitive materials, materials selection, design for end of life, lifecycle extension, energy conservation, end of life management, corporate performance, and packaging. This Standard applies to products that are primarily marketed as televisions, and does not cover computer displays as defined by IEEE 1680.1.

BSR/IEEE 1680-200x, Standard for Environmental Assessment of Personal Computer products (including laptop and desktop computers, and monitors) (new standard)

Stakeholders: Institutional purchasers, electronic product manufacturers, trade associations.

Project Need: To create a comprehensive standard for evaluating environmental attributes of electronic products.

Defines environmental performance standards for desktop computers, laptop computers, and monitors. This standard addresses the following eight categories of environmental product performance:

1. Reduction/elimination of environmentally sensitive materials;
2. Materials selection;
3. Design for end of life;
4. Life cycle extension;
5. Energy conservation;
6. End of life management;
7. Corporate performance; and
8. Packaging.

BSR/IEEE 1685-200x, Standard Structure for Packaging, Integrating and Re-using IP within Tool-flows, (SPIRIT) (new standard)

Stakeholders: Electronics industry.

Project Need: As designs get larger and more complex, the electronics industry is using increasing numbers of IP blocks in those designs. The lack of a standard description of those blocks makes their use difficult and error.

Describes a metadata schema for the description of Intellectual Property (IP) and an Application Programming Interface (API) to provide tool access to this schema. This schema provides a standard method to describe IP that is compatible with automated integration techniques.

BSR/IEEE 1722.1-201x, Standard Device Discovery, Connection Management and Control Protocol for IEEE 1722 Based Devices (new standard)

Stakeholders: Developers and users of bridged LAN and end-point systems supporting audio/video applications.

Project Need: To define a simple yet common method for handling real-time audio/video suitable for consumer electronics, professional A/V applications, etc.

 Specifies the protocol, device discovery, connection management, and device control procedures used to ensure interoperability between audio- and video-based end stations that use IEEE-1722-based stream on IEEE-802-based networks.

BSR/IEEE 1808-201x, Guide for Collecting and Managing Transmission Line Inspection and Maintenance Data (new standard)

Stakeholders: Computer-based data collection and management.

Project Need: To provide resources to guide the design and development of systems appropriate for their work practices and reporting requirements in the area of transmission line inspection and maintenance.

Provides reference information to assist electric utilities and their contractors with the development of computer-based means for collecting and managing transmission-line inspection and maintenance data and associated asset information including transmission-line inventory data. This standard provides a high-level overview of key principles and considerations learned through experience that will help ensure common pitfalls are avoided and enhance the usability of systems.

BSR/IEEE 1809-201x, Guide for Electric-Sourced Transportation Infrastructure (new standard)

Stakeholders: Electric power system owners, planners, designers, and operators; electricity consumers.

Project Need: To provide guidelines that, if adopted, will facilitate the wide-scale and consistent implementation of electric-sourced, road-based transportation.

Provides guidelines that can be used by utilities, manufacturers, transportation providers, infrastructure developers, and end users of electric-sourced vehicles and related support infrastructure in addressing applications for road-based personal and mass transportation. This guide provides a knowledge base addressing terminology, methods, equipment, and planning requirements for such transportation and its impacts on commercial and industrial systems including, for example, generation, transmission, and distribution systems of electrical power.

BSR/IEEE 16326-200x, Software Engineering - Project management (new standard)

Stakeholders: Software engineers.

Project Need: To update the current standard, extend it to include project execution as well as planning, to promote it to the status of an International Standard, and to achieve greater harmonization with software engineering standards of JTC1/SC7; the relevant standards of ISO TC176, IEEE, and PMI; and the merging systems engineering standards of JTC1/SC7.

BSR/IEEE 26512-201x, Standard for Software and Systems Engineering - Requirements for Acquirers and Suppliers of User Documentation (new standard)

Stakeholders: Acquirers/suppliers of user documentation, information designers and architects, business analysts.

Project Need: To cover the requirements for information items used in the acquisition of user documentation products.

Describes the acquisition and supply processes as applicable to user documentation, including how to establish what information users need, how to determine the way in which that information should be presented to the users, and how to specify the required information and its delivery. This standard is not limited to the initial selection activities in the acquisition/supply processes, but includes activities throughout the information management and documentation processes. It applies to printed user manuals, online help, tutorials, and user reference documentation.
BSR/IEEE 26513-201x, Standard for Systems and Software Engineering - Requirements for Testers and Reviewers of User Documentation (identical national adoption of ISO/IEC 26513)

Stakeholders: Managers, authors, acquirers of documentation.
Project Need: To assist those who test and review software user documentation as part of the software lifecycle process.

Defines the process in which user documentation products are tested. This standard is not limited to the test and review phase of the lifecycle, but includes activities throughout the Information Management and Documentation Management processes. This International Standard is intended for use in all types of organizations, whether or not a dedicated documentation department is present. It applies to printed user manuals, online help, tutorials, and user reference documentation. This International Standard deals with the evaluation of documentation only, and not with the evaluation of the software it supports.

BSR/IEEE 26514-201x, Standard for Systems and Software Engineering - Requirements for Designers and Developers of User Documentation (identical national adoption of ISO/IEC 26514)

Stakeholders: Software user documentation designers, writers, editors, managers, and acquirers.
Project Need: IEEE 26514 will supersede IEEE 1063, Standard for Software User Documentation. IEEE 26514 incorporates the normative content of IEEE 1063 on the structure, format, and content of user documentation, and also includes requirements for the information management and documentation processes and substantial additional informative material.

Supports the interest of software users in consistent, complete, accurate, and usable documentation. The first part of this International Standard covers the user documentation process for designers and developers of documentation. It describes how to establish what information users need, how to determine the way in which that information should be presented to the users, and how to prepare the information and make it available. It is not limited to the design and development phase of the lifecycle, but includes activities throughout the information management and documentation processes.

Stakeholders: Ports, shipbuilders, designers of shore power systems as well as end users and regulatory agencies.
Project Need: To provide coordinated development of analytical techniques, port infrastructure, and shipboard electrical plants, which will facilitate the implementation of the "any ship, any port" concept.

Describes high-voltage shore connection (HVSC) systems, on board the ship and on shore, to supply the ship with electrical power from shore during the port lay period. This standard is applicable to the design, installation and testing of HVSC systems and plants and addresses:
- high-voltage shore distribution system;
- shore-to-ship connection;
- transformers/reactors;
- semiconductor/rotating convertors;
- ship distribution system; and
- control, monitoring, interlocking, and power management system.

BSR/IEEE C95.1-2345-201x, Standard for the Evaluation and Control of Personnel Exposure to Electric, Magnetic and Electromagnetic Fields, 0 Hz to 300 GHz (new standard)

Stakeholders: NATO members and other organizations in need of workplace standards.
Project Need: Under an agreement between IEEE and the NATO Standardization Agency, this standard will be considered for use under NATO STANAG 2345.

Provides recommendations that protect personnel against established adverse health effects associated with exposure to electric, magnetic, and electromagnetic fields in the frequency range of 0 Hz to 300 GHz. The recommendations are expressed in terms of basic restrictions (BRs) and reference levels. The BRs are limits on internal fields, specific absorption rate (SAR), and power density; the reference levels are derived from the BRs, and are expressed in terms of external fields and induced and contact current.

IPC (IPC - Association Connecting Electronics Industries)
Office: 3000 Lakeside Drive Suite 309-S
Bannockburn, IL 60015
Contact: Jeanne Cooney
Fax: (847) 615-5642
E-mail: JeanneCooney@ipc.org
BSR/IPC-1758-201x, Declaration of Shipping, Packing and Packaging Materials (new standard)

Stakeholders: Electronics manufacturing industry.
Project Need: To facilitate the gathering and exchange of information related to the compliance and conformance with customer and legal requirements pertaining to shipping, packing, and packaging materials.

Establishes the requirements for exchanging material and substance data between suppliers and their customers for shipping, packing, and packaging. This standard applies to shipping, packing, and packaging that is supplied to or used by producers of EEE for the protection, handling and transportation of their products. It covers materials and substances that may be present in the supplied shipping, packing or packaging materials.

BSR/IPC A-610E-201x, Acceptability of Electronic Assemblies (revision and redesignation of ANSI/IPC A-610D-2005)

Stakeholders: Electronics manufacturing industry.
Project Need: This standard is used world-wide by companies that make electronic assemblies.

In the 18 months since Rev D was published, IPC has on file more than 80 comments (included some deferred from Rev D), and the committee has asked to begin work on Rev E. A large number of these comments are to technical content that will also impact J-STD-001, and a separate PIN to open that document for Rev E has also been submitted.

Stakeholders: Electronics manufacturing industry.
Project Need: This standard is used world-wide by companies that make electronic assemblies.

In the 18 months since Rev D was published, IPC has on file more than 80 comments (included some deferred from Rev D), and the committee has asked to begin work on Rev E. A large number of these comments are to technical content that will also impact IPC-A-610, and a separate PIN to open that document for Rev E has also been submitted.

Stakeholders: ICT industry.

Project Need: To adopt this International Standard, which will be beneficial to the ICT industry.

Specifies the conceptual schema for the description of spatial referencing using parametric values or functions. This standard applies the schema of ISO 19111 to combine a position referenced by coordinates with a parametric value to form a spatio-parametric coordinate reference system (CRS). The spatio-parametric CRS can optionally be extended to include time. The intended users of ISO 19111-2:2009 are producers and users of environmental information. Parameters that are attributes of spatial locations or features but that are not involved in their spatial referencing are not addressed by this standard.

Stakeholders: ICT industry.

Project Need: To adopt this International Standard, which will be beneficial to the ICT industry.

Establishes the structure of a geographic information classification system, together with the mechanism for defining and registering the classifiers for such a system. This standard specifies the use of discrete coverages to represent the result of applying the classification system to a particular area and defines the technical structure of a register of classifiers in accordance with ISO 19135.

Stakeholders: ICT industry.

Project Need: To adopt this International Standard, which will be beneficial to the ICT industry.

Represents the first Corrigendum to ISO 6709:2008.

BSR/EIA 836-B-201x, Configuration Management Data Exchange and Interoperability (revision of ANSI/EIA 836-A-2008)

Stakeholders: Commercial, military, and space electronics manufacturers; system integrators; operators.

Project Need: To evaluate and incorporate approved submitted Requests for Change to EIA-836-A and to review and update references used in creation of the standard.

Logically extends the Configuration Management (CM) principles of ANSI/EIA 649. This standard provides for interoperability between trading partners by establishing a common language for the exchange of data between dissimilar databases. The Data Dictionary, which is the normative portion of this standard, identifies standard terms, their definitions, and relationships.
American National Standards Maintained Under Continuous Maintenance

The ANSI Essential Requirements: Due Process Requirements for American National Standards provide two options for the maintenance of American National Standards (ANS): periodic maintenance (see clause 4.7.1) and continuous maintenance (see clause 4.7.2). Continuous maintenance is defined as follows:

The standard shall be maintained by an accredited standards developer. A documented program for periodic publication of revisions shall be established by the standards developer. Processing of these revisions shall be in accordance with these procedures. The published standard shall include a clear statement of the intent to consider requests for change and information on the submittal of such requests. Procedures shall be established for timely, documented consensus action on each request for change and no portion of the standard shall be excluded from the revision process. In the event that no revisions are issued for a period of four years, action to reaffirm or withdraw the standard shall be taken in accordance with the procedures contained in the ANSI Essential Requirements.

The Executive Standards Council (ExSC) has determined that for standards maintained under the Continuous Maintenance option, separate PINS announcements are not required. The following ANSI Accredited Standards Developers have formally registered standards under the Continuous Maintenance option.

- AAMI
- AAMVA
- AGA
- AGRSS, Inc.
- ASC X9
- ASHRAE
- ASME
- ASTM
- GEIA
- HL7
- MHI (ASC MH10)
- NBBPVI
- NCPDP
- NISO
- NSF
- TIA
- Underwriters Laboratories, Inc. (UL)

To obtain additional information with regard to these standards, such as contact information at the ANSI accredited standards developer, please visit ANSI Online at www.ansi.org, select Internet Resources, click on "Standards Information," and see "American National Standards Maintained Under Continuous Maintenance". This information is also available directly at www.ansi.org/publicreview.

Alternatively, you may contact the Procedures & Standards Administration Department (PSA) at psa@ansi.org or via fax at 212-840-2298. If you request that information be provided via E-mail, please include your E-mail address; if you request that information be provided via fax, please include your fax number. Thank you.
ISO Standards

COMPRESSORS, PNEUMATIC TOOLS AND PNEUMATIC MACHINES (TC 118)
ISO/DIS 11148-1, Hand-held non-electric power tools - Safety requirements - Part 1: Assembly power tools for non-threaded mechanical fasteners - 1/14/2010, $88.00
ISO/DIS 11148-2, Hand-held non-electric power tools - Safety requirements - Part 2: Cutting-off and crimping power tools - 1/14/2010, $82.00
ISO/DIS 11148-5, Hand-held non-electric power tools - Safety requirements - Part 5: Rotary percussive drills - 1/14/2010, $88.00
ISO/DIS 11148-7, Hand-held non-electric power tools - Safety requirements - Part 7: Grinders - 1/14/2010, $125.00
ISO/DIS 11148-8, Hand-held non-electric power tools - Safety requirements - Part 8: Sanders and polishers - 1/14/2010, $88.00
ISO/DIS 11148-9, Hand-held non-electric power tools - Safety requirements - Part 9: Die grinders - 1/14/2010, $88.00
ISO/DIS 11148-10, Hand-held non-electric power tools - Safety requirements - Part 10: Compression power tools - 1/14/2010, $93.00
ISO/DIS 11148-11, Hand-held non-electric power tools - Safety requirements - Part 11: Nibblers and shears - 1/14/2010, $88.00
ISO/DIS 11148-12, Hand-held non-electric power tools - Safety requirements - Part 12: Circular, oscillating and reciprocating saws - 1/14/2010, $98.00

DIMENSIONAL AND GEOMETRICAL PRODUCT SPECIFICATIONS AND VERIFICATION (TC 213)
ISO/DIS 13102, Geometrical product specifications (GPS) - Dimensional measuring equipment: Electronic digital indicator - Design and metrological characteristics - 1/14/2010, $62.00

EQUIPMENT FOR FIRE PROTECTION AND FIRE FIGHTING (TC 21)
ISO/DIS 7240-6, Fire detection and alarm systems - Part 6: Carbon monoxide fire detectors using electro-chemical cells - 1/18/2010, $112.00

FLOOR COVERINGS (TC 219)
ISO/DIS 10575, Resilient floor coverings - Specification for rubber sheet floor coverings with backing - 1/18/2010, $46.00
ISO/DIS 10577, Resilient floor coverings - Specification for rubber sheet floor coverings without backing - 1/18/2010, $46.00

INFORMATION AND DOCUMENTATION (TC 46)
ISO/DIS 27729, Information and documentation - International Standard Name Identifier (ISNI) - 1/15/2010, $58.00

MACHINE TOOLS (TC 39)
ISO/DIS 230-1, Test code for machine tools - Part 1: Geometric accuracy of machines operating under no-load or quasi-static conditions - 1/14/2010, $165.00

OTHER
ISO/DIS 13365, Leather - Chemical tests - Determination of the preservative (TCMTB, CMK, OPP, OIT) content in leather - 1/14/2010, $40.00

PAPER, BOARD AND PULPS (TC 6)
ISO/DIS 12625-1, Tissue paper and tissue products - Part 1: General principles for the use of terms - 1/14/2010, $71.00

PERSONAL SAFETY - PROTECTIVE CLOTHING AND EQUIPMENT (TC 94)
ISO/DIS 12312-1, Eye and face protection - Sunglasses and related eyewear - Part 1: Sunglasses for general use - 1/14/2010, $82.00

TEXTILES (TC 38)
ISO/DIS 105-B02, Textiles - Tests for colour fastness - Part B02: Colour fastness to artificial light: Xenon arc fading lamp test - 1/14/2010, $102.00

TRACTORS AND MACHINERY FOR AGRICULTURE AND FORESTRY (TC 23)
ISO/DIS 22867, Forestry and garden machinery - Vibration test code for portable hand-held machines with internal combustion engine - Vibration at the handles - 1/14/2010, $88.00

ISO/IEC JTC 1, Information Technology
IEC Standards

31/837/FDIS, IEC 60079-20-1 Ed. 1.0: Explosive Atmospheres - Part 20-1: Material characteristics for gas and vapour classification - Test methods and data, 12/18/2009

91/897/FDIS, IEC 61191-6 Ed.1: Printed board assemblies - Part 6: Evaluation criteria for voids in soldered joints of BGA and LGA and measurement method, 12/18/2009

31/833/FDIS, IEC 60079-15 Ed. 4.0: Explosive atmospheres - Part 15: Equipment protection by type of protection "n", 12/11/2009

101/292/FDIS, IEC 61340-4-7 Ed.1: Electrostatics - Part 4-7: Standard test methods for specific applications - Ionization, 12/11/2009

101/293/FDIS, IEC 61340-4-8 Ed.1: Electrostatics - Part 4-8: Standard test methods for specific applications - Discharge shielding - Bags, 12/11/2009

34B/1488/FDIS, IEC 60061: Lamp caps and holders together with gauges for the control of interchangeability and safety Part 2: Lampholders - Amendment 40, 12/04/2009

34B/1489/FDIS, IEC 60061: Lamp caps and holders together with gauges for the control of interchangeability and safety Part 3: Gauges - Amendment 41, 12/04/2009

46C/903/FDIS, IEC 61156-6 Ed. 3.0: Multicore and symmetrical pair/quad cables for digital communications - Part 6: Symmetrical pair/quad cables with transmission characteristics up to 1 000 MHz - Work area wiring - Sectional specification, 12/04/2009

82/582/FDIS, IEC 60904-10 Ed.2: Photovoltaic devices - Part 10: Methods of linearity measurement, 12/04/2009

100/1622/FDIS, IEC 60728-1-1: Cable networks for television signals, sound signals and interactive services - Part 1-1: RF cabling for two way home networks (TA 5), 12/04/2009

100/1623/FDIS, IEC 60728-13: Cable networks for television signals, sound signals and interactive services - Part 13: Optical systems for broadcast signal transmissions, 12/04/2009

100/1624/FDIS, IEC 62458: Sound system equipment - Electroacoustical transducers - Measurement of large signal parameters, 12/04/2009
Listed here are new and revised standards recently approved and promulgated by ISO - the International Organization for Standardization – and IEC – the International Electrotechnical Commission. Most are available at the ANSI Electronic Standards Store (ESS) at www.ansi.org. All paper copies are available from Standards resellers (http://webstore.ansi.org/faq.aspx#resellers).

IEC Standards

AUDIO, VIDEO AND MULTIMEDIA SYSTEMS AND EQUIPMENT (TC 100)
- IEC 60728-7-3 Ed. 2.0 en:2009, Cable networks for television signals, sound signals and interactive services - Part 7-3: Hybrid fibre coax outside plant status monitoring - Power supply to transponder interface bus (PSTIB), $158.00
- IEC 60958-SER Ed. 1.0 b:2009, Digital audio interface - ALL PARTS, $460.00
- IEC 60958-3 Amd.1 Ed. 3.0 en:2009, Amendment 1 - Digital audio interface - Part 3: Consumer applications, $46.00

AUTOMATIC CONTROLS FOR HOUSEHOLD USE (TC 72)
- IEC 60730-2-17 Ed. 1.0 b:1997, Automatic electrical controls for household and similar use - Part 2: Particular requirements for electrically operated gas valves, including mechanical requirements, $128.00
- IEC 60730-2-19 Ed. 1.0 b:1997, Automatic electrical controls for household and similar use - Part 2: Particular requirements for electrically operated oil valves, including mechanical requirements, $128.00

CABLES, WIRES, WAVEGUIDES, R.F. CONNECTORS, AND ACCESSORIES FOR COMMUNICATION AND SIGNALLING (TC 46)
- IEC 61156-1 Ed. 3.1 b:2009, Multicores and symmetrical pair/quad cables for digital communications - Part 1: Generic specification, $179.00
- IEC 61156-5-1 Ed. 3.0 en:2009, Multicores and symmetrical pair/quad cables for digital communications - Part 5-1: Symmetrical pair/quad cables with transmission characteristics up to 1 000 MHz - Horizontal floor wiring - Blank detail specification, $51.00
- IEC 61156-6-1 Ed. 3.0 en:2009, Multicores and symmetrical pair/quad cables for digital communications - Part 6-1: Symmetrical pair/quad cables with transmission characteristics up to 1 000 MHz - Work area wiring - Blank detail specification, $51.00

DEGREES OF PROTECTION BY ENCLOSURES (TC 70)
- IEC 60529 Ed. 2.1 b Cor.3:2009, Corrigendum 3 - Degrees of protection provided by enclosures (IP Code), $0.00

ELECTRIC CABLES (TC 20)
- IEC 60811-2-1 Ed. 2.0 b:1998, Insulating and sheathing materials of electric and optical cables - Common test methods - Part 2-1: Methods specific to elastomeric compounds - Ozone resistance, hot set and mineral oil immersion tests, $56.00

ELECTRICAL ACCESSORIES (TC 23)
- IEC 60320-2-4 Amd.1 Ed. 1.0 b:2009, Amendment 1 - Appliance couplers for household and similar general purposes - Part 2-4: Couplers dependent on appliance weight for engagement, $56.00
- IEC 60669-1 Ed. 3.0 b:1998, Switches for household and similar fixed-electrical installations - Part 1: General requirements, $260.00

ELECTRICAL EQUIPMENT IN MEDICAL PRACTICE (TC 62)
- IEC/TR 62354 Ed. 2.0 en:2009, General testing procedures for medical electrical equipment, $291.00

- IEC 60601-2-33 Ed. 2.0 b:2002, Medical electrical equipment - Part 2-33: Particular requirements for the safety of magnetic resonance equipment for medical diagnosis, $260.00
- IEC 60789 Ed. 3.0 b Cor.1:2009, Corrigendum 1 - Medical electrical equipment - Characteristics and test conditions of radionuclide imaging devices - Anger type gamma cameras, $0.00

ELECTRICAL ACCESSORIES (TC 23)
- IEC 60925 Ed. 1.0 b:1989, D.C. supplied electronic ballasts for tubular fluorescent lamps - Performance requirements, $97.00
- IEC 60968 Ed. 1.0 b:1988, Self-ballasted lamps for general lighting services - Safety requirements, $66.00

FIBRE OPTICS (TC 86)
- IEC 61753-086-2 Ed. 1.0 en:2009, Fibre optic interconnecting devices and passive components performance standard - Part 086-2: Non-connectorized single-mode bidirectional 1490 / 1550 nm downstream 1310 nm upstream WWDM devices for category C - Controlled environment, $66.00

FUSES (TC 32)
- IEC 60282-1 Ed. 7.0 b:2009, High-voltage fuses - Part 1: Current-limiting fuses, $250.00

INDUSTRIAL-PROCESS MEASUREMENT AND CONTROL (TC 65)
- IEC 61512-4 Ed. 1.0 b:1997, Batch control - Part 4: Batch production records, $235.00

INSTRUMENT TRANSFORMERS (TC 38)
- IEC 60444-2 Ed. 1.0 b:1997, Instrument transformers - Part 2: Inductive voltage transformers, $158.00

INSULATING MATERIALS (TC 15)
- IEC 60893-3-5 Ed. 2.1 b:2009, Insulating materials - Industrial rigid laminated sheets based on thermosetting resins for electrical purposes - Part 3-5: Specifications for individual materials - Requirements for rigid laminated sheets based on polyester resins, $66.00

- IEC 61061-1 Ed. 3.0 b:2006, Non-impregnated densified laminated wood for electrical purposes - Part 1: Definitions, designation and general requirements, $36.00

- IEC 61212-3-3 Ed. 2.0 b:2006, Insulating materials - Industrial rigid round laminated tubes and rods based on thermosetting resins for electrical purposes - Part 3: Specifications for individual materials - Sheet 3: Round laminated moulded rods, $46.00

LAMPS AND RELATED EQUIPMENT (TC 34)
- IEC 60925 Ed. 1.0 b:1989, D.C. supplied electronic ballasts for tubular fluorescent lamps - Performance requirements, $97.00
- IEC 60968 Ed. 1.0 b:1988, Self-ballasted lamps for general lighting services - Safety requirements, $66.00
IEC 60969 Ed. 1.0 b:1988, Self-ballasted lamps for general lighting services - Performance requirements, $46.00
IEC 61347-2-9 Ed. 1.2 b:2009, Lamp controlgear - Part 2-9: Particular requirements for ballasts for discharge lamps (excluding fluorescent lamps), $133.00

LASER EQUIPMENT (TC 76)
IEC 60825-2 Ed. 3.0 b:2004, Safety of laser products - Part 2: Safety of optical fibre communication systems (OFCS), $204.00

MAGNETIC COMPONENTS AND FERRITE MATERIALS (TC 51)
IEC 60205 Ed. 3.0 b:2006, Calculation of the effective parameters of magnetic piece parts, $128.00

OTHER
CISPR 14-2 Ed. 1.0 b:1997, Electromagnetic compatibility - Requirements for household appliances, electric tools and similar apparatus - Part 2: Immunity - Product family standard, $77.00

PERFORMANCE OF HOUSEHOLD ELECTRICAL APPLIANCES (TC 59)
IEC 60311 Ed. 4.2 en:2009, Electric irons for household or similar use - Methods for measuring performance, $230.00
IEC 60704-2-3 Ed. 2.0 b:2001, Performance of high-voltage direct current (HVDC) systems with line-commutated converters - Part 3: Dynamic conditions, $179.00
IEC/TR 62001 Ed. 1.0 en:2009, High-voltage direct current (HVDC) systems - Guidebook to the specification and design evaluation of A.C. filters, $291.00

POWER ELECTRONICS (TC 22)
IEC/TR 60919-3 Ed. 2.0 b:2009, Performance of high-voltage direct current (HVDC) systems with line-commutated converters - Part 3: Dynamic conditions, $179.00

ROTATING MACHINERY (TC 2)
IEC 60034-7 Ed. 2.0 b:1992, Rotating electrical machines - Part 7: Classification of types of constructions and mounting arrangements (IM Code), $107.00

SAFETY OF ELECTRICALLY-OPERATED FARM APPLIANCES (TC 61H)
IEC 60335-2-70 Ed. 2.0 b:2002, Household and similar electrical appliances - Safety - Part 2-70: Particular requirements for milking machines, $87.00
IEC 60335-2-71 Ed. 2.0 b:2002, Household and similar electrical appliances - Safety - Part 2-71: Particular requirements for electrical heating appliances for breeding and rearing animals, $87.00
IEC 60335-2-76 Ed. 2.0 b:2002, Household and similar electrical appliances - Safety - Part 2-76: Particular requirements for electric fence energizers, $179.00
IEC 60335-2-86 Ed. 2.0 b:2002, Household and similar electrical appliances - Safety - Part 2-86: Particular requirements for electric fishing machines, $97.00
IEC 60335-2-87 Ed. 2.0 b:2002, Household and similar electrical appliances - Safety - Part 2-87: Particular requirements for electrical animal-stungging equipment, $107.00

SAFETY OF HAND-HELD MOTOR-OPERATED ELECTRIC TOOLS (TC 116)
IEC 60745-2-1 Ed. 2.0 b:2003, Hand-held motor-operated electric tools - Safety - Part 2-1: Particular requirements for drills and impact drills, $66.00
IEC 60745-2-2 Ed. 2.0 b:2003, Hand-held motor-operated electric tools - Safety - Part 2-2: Particular requirements for screwdrivers and impact wrenches, $51.00
IEC 60745-2-4 Ed. 2.0 b:2002, Hand-held motor-operated electric tools - Safety - Part 2-4: Particular requirements for sanders and polishers other than disk type, $46.00
IEC 60745-2-6 Ed. 2.0 b:2003, Hand-held motor-operated electric tools - Safety - Part 2-6: Particular requirements for hammers, $66.00
IEC 60745-2-11 Ed. 2.0 b:2003, Hand-held motor-operated electric tools - Safety - Part 2-11: Particular requirements for reciprocating saws (jig and sabre saws), $51.00
IEC 60745-2-12 Ed. 2.0 b:2003, Hand-held motor-operated electric tools - Safety - Part 2-12: Particular requirements for concrete vibrators, $56.00
IEC 60745-2-21 Ed. 1.0 b:2002, Hand-held motor-operated electric tools - Safety - Part 2-21: Particular requirements for drain cleaners, $36.00

SAFETY OF HOUSEHOLD AND SIMILAR ELECTRICAL APPLIANCES (TC 61)
IEC 60335-2-2 Ed. 5.0 b:2002, Household and similar electrical appliances - Safety - Part 2-2: Particular requirements for vacuum cleaners and water-suction cleaning appliances, $107.00
IEC 60335-2-3 Ed. 5.0 b:2002, Household and similar electrical appliances - Safety - Part 2-3: Particular requirements for electric irons, $87.00
IEC 60335-2-5 Ed. 5.0 b:2002, Household and similar electrical appliances - Safety - Part 2-5: Particular requirements for dishwashers, $97.00
IEC 60335-2-6 Ed. 5.0 b:2002, Household and similar electrical appliances - Safety - Part 2-6: Particular requirements for stationary cooking ranges, hobs, ovens and similar appliances, $158.00
IEC 60335-2-8 Ed. 5.0 b:2002, Household and similar electrical appliances - Safety - Part 2-8: Particular requirements for shavers, hair clippers and similar appliances, $66.00
IEC 60335-2-10 Ed. 5.0 b:2002, Household and similar electrical appliances - Safety - Part 2-10: Particular requirements for floor treatment machines and wet scrubbing machines, $56.00
IEC 60335-2-12 Ed. 5.0 b:2002, Household and similar electrical appliances - Safety - Part 2-12: Particular requirements for warming plates and similar appliances, $61.00
IEC 60335-2-13 Ed. 5.0 b:2002, Household and similar electrical appliances - Safety - Part 2-13: Particular requirements for deep fat fryers, frying pans and similar appliances, $66.00
IEC 60335-2-15 Ed. 5.0 b:2002, Household and similar electrical appliances - Safety - Part 2-15: Particular requirements for appliances for heating liquids, $107.00
IEC 60335-2-16 Ed. 5.0 b:2002, Household and similar electrical appliances - Safety - Part 2-16: Particular requirements for food waste disposers, $61.00
IEC 60335-2-17 Ed. 2.0 b:2002, Household and similar electrical appliances - Safety - Part 2-17: Particular requirements for blankets, pads and similar flexible heating appliances, $204.00
IEC 60335-2-17 Ed. 2.2 b:2009, Household and similar electrical appliances - Safety - Part 2-17: Particular requirements for blankets, pads, clothing and similar flexible heating appliances, $230.00
IEC 60335-2-21 Ed. 5.0 b:2002, Household and similar electrical appliances - Safety - Part 2-21: Particular requirements for storage water heaters, $107.00
IEC 60335-2-24 Ed. 6.0 b:2002, Household and similar electrical appliances - Safety - Part 2-24: Particular requirements for refrigerating appliances, ice-cream appliances and ice-makers, $179.00
IEC 60335-2-26 Ed. 4.0 b:2002, Household and similar electrical appliances - Safety - Part 2-26: Particular requirements for clocks, $56.00
SAFETY OF MACHINERY - ELECTROTECHNICAL ASPECTS (TC 44)
IEC 61496-1 Ed. 2.0 b Cor.1:2008, Corrigendum 1 - Safety of machinery - Electro-sensitive protective equipment - Part 1: General requirements and tests, $0.00

SURFACE MOUNTING TECHNOLOGY (TC 91)
IEC 61188-5-4 Ed. 1.0 b:2007, Printed boards and printed board assemblies - Design and use - Part 5-4: Attachment (land/joint) considerations - Components with J leads on two sides, $66.00
IEC 61188-5-5 Ed. 1.0 b:2007, Printed boards and printed board assemblies - Design and use - Part 5-5: Attachment (land/joint) considerations - Components with gull-wing leads on four sides, $179.00
IEC 61188-7 Ed. 1.0 b:2009, Printed boards and printed board assemblies - Design and use - Part 7: Electronic component zero orientation for CAD library construction, $97.00

WINDING WIRES (TC 55)
IEC 60317-0-2 Ed. 2.0 b:1997, Specifications for particular types of winding wires - Part 0: General requirements - Section 2: Enamelled rectangular copper wire, $107.00
IEC 60317-0-4 Ed. 2.0 b:1997, Specifications for particular types of winding wires - Part 0: General requirements - Section 4: Glass-fibre wound resin or varnish impregnated, bare or enamelled rectangular copper wire, $107.00
IEC 60851-2 Ed. 3.0 b:2009, Winding wires - Test methods - Part 2: Determination of dimensions, $56.00

IEC Technical Specifications

ELECTROMAGNETIC COMPATIBILITY (TC 77)
IEC/TS 61000-3-5 Ed. 2.0 b Cor.1:2009, Corrigendum 1 - Electromagnetic compatibility (EMC) - Part 3-5: Limits - Limitation of voltage fluctuations and flicker in low-voltage power supply systems for equipment with rated current greater than 75 A, $0.00

INSULATORS (TC 36)
IEC/TS 61463 Ed. 1.0 b:1996, Bushings - Seismic qualification, $143.00
Proposed Foreign Government Regulations

Call for Comment

U.S. manufacturers, exporters, regulatory agencies and standards developing organizations may be interested in proposed foreign technical regulations issued by Member countries of the World Trade Organization (WTO). In accordance with the WTO Agreement on Technical Barriers to Trade (TBT Agreement), Members are required to report proposed technical regulations that may significantly affect trade to the WTO Secretariat in Geneva, Switzerland. In turn, the Secretariat disseminates the information to all WTO Members. The purpose of this requirement is to provide global trading partners with an opportunity to review and comment on the regulations before they become final.

The National Center for Standards and Certification Information (NCSCI) at the National Institute of Standards and Technology (NIST), distributes these proposed foreign technical regulations to U.S. stakeholders via an online service, Notify U.S. Notify U.S. is an e-mail and Web service that allows interested U.S. parties to register, obtain notifications, and read full texts of regulations from countries and for industry sectors of interest to them. To register for Notify U.S., please go to Internet URL: http://www.nist.gov/notifyus/ and click on “Subscribe”.

NCSCI is the WTO TBT Inquiry Point for the U.S. and receives all notifications and full texts of regulations to disseminate to U.S. Industry. For further information, please contact: NCSCI, NIST, 100 Bureau Drive, Gaithersburg, MD 20899-2160; Telephone: (301) 975-4040; Fax: (301) 926-1559; E-mail: ncsci@nist.gov or notifyus@nist.gov.
American National Standards
INCITS Executive Board
ANSI Accredited SDO and US TAG to ISO/IEC JTC 1, Information Technology
The InterNational Committee for Information Technology Standards (INCITS), an ANSI accredited SDO, is the forum for information technology developers, producers and users to create and maintain formal de jure IT standards. INCITS’ mission is to promote the effective use of Information and Communication Technology through standardization in a way that balances the interests of all stakeholders and increases the global competitiveness of the member organizations.

The INCITS Executive Board serves as the consensus body with its oversight of programs of its 30+ Technical Committees. Additionally, the INCITS Executive Board exercises international leadership in its role as the US Technical Advisory Group (TAG) to ISO/IEC JTC 1, Information Technology.

The INCITS Executive Board seeks to broaden its membership base and is recruiting new participants in all membership categories:
- special interest (user, academic, consortia)
- non-business (government and major/minor SDOs)
- business (large/small businesses and consultants)

Membership in the INCITS Executive Board is open to all directly and materially affected parties in accordance with INCITS membership rules. To find out more about participating on the INCITS Executive Board, please contact Jennifer Garner at 202-626-5737 or jgarner@itic.org.

PINS Correction
ASA S12.10
The PINS listing for ASA S12.10 in the October 16, 2009 Standards Action was printed in error. A PINS for this project was already listed in a previous edition.

ANSI Accredited Standards Developers
Administrative Reaccreditations
Building Hardware Manufacturers Association (BHMA)
The Building Hardware Manufacturers Association (BHMA) has been administratively reaccredited at the direction of ANSI’s Executive Standards Council, under operating procedures revised to bring the document into compliance with the 2009 version of the ANSI Essential Requirements, effective October 20, 2009. For additional information, please contact: Mr. Michael Tierney, Standards Coordinator, Building Hardware Manufacturers Association, 355 Lexington Avenue, 17th Floor, New York, NY 10017-6603; PHONE: (212) 297-2122; FAX: (212) 370-9047; E-mail: mtierney@kellencompany.com.

Window Covering Manufacturers Association (WCMA)
The Window Covering Manufacturers Association (WCMA) has been administratively reaccredited at the direction of ANSI’s Executive Standards Council, under operating procedures revised to bring the document into compliance with the 2009 version of the ANSI Essential Requirements, effective October 20, 2009. For additional information, please contact: Mr. Michael Tierney, Standards Coordinator, Window Covering Manufacturers Association, 355 Lexington Avenue, 17th Floor, New York, NY 10017-6603; PHONE: (212) 297-2122; FAX: (212) 370-9047; E-mail: mtierney@kellencompany.com.

Reaccreditations
ASTM International
Comment Deadline: November 23, 2009
ASTM International, a full ANSI Organizational Member, has submitted revisions to its Regulations Governing ASTM Technical Committees, under which it was last reaccredited in July 2005. As these revisions appear to be substantive in nature, the reaccreditation process is initiated.

To obtain a copy of ASTM’s revised regulations, or to offer comments, please contact: Mr. Daniel A. Schultz, Director, ASTM International Committee Services, ASTM International, 100 Barr Harbor Drive, West Conshohocken, PA 19428; PHONE: (610) 832-9716; FAX: (610) 834-3609; E-mail: dschultz@astm.org. You may view/download a copy of the revisions during the public review period at the following URL:
http://publicaa.ansi.org/sites/apdl/Documents/Forms/AllItems.aspx?RootFolder=%2fsites%2fpad%2fDocuments%2fStandards%2f20Activities%2fpPublic%2fReview%2fand%2fComments%2f20Accreditation%2f20Actions&View=%b21C60355%4dA17%2d4CD7%2dA090%2dBABEEC5D7C60%7d
Please submit public comments to ASTM by November 23, 2009, with a copy to the ExSC Recording Secretary in ANSI’s New York Office (E-mail: Jthomps@ANSI.org).

National Board of Boiler and Pressure Vessel Inspectors (NBBPVI)
Comment Deadline: November 23, 2009
The National Board of Boiler and Pressure Vessel Inspectors (NBBPVI), a full ANSI Organizational Member, has submitted revisions to the operating procedures (National Board Inspection Code Procedure) under which it was last reaccredited in November 2007. As these revisions appear to be substantive in nature, the reaccreditation process is initiated.

To obtain a copy of NBBPVI’s revised procedures, or to offer comments, please contact: Ms. Robin Hough, NBIC Committee Coordinator, NBBPVI, 1055 Crupper Avenue, Columbus, OH 43229; PHONE: (614) 888-8320, ext. 228; E-mail: RHough@nationalboard.org. You may view/download a copy of the revisions during the public review period at the following URL:
http://publicaa.ansi.org/sites/apdl/Documents/Forms/AllItems.aspx?RootFolder=%2fsites%2fpad%2fDocuments%2fStandards%2f20Activities%2fpPublic%2fReview%2fand%2fCompliance%2f20Accreditation%2f20Actions&View=%b21C60355%4dA17%2d4CD7%2dA090%2dBABEEC5D7C60%7d
Please submit comments to NBBPVI by November 23, 2009, with a copy to the ExSC Recording Secretary in ANSI’s New York Office (E-mail: Jthomps@ANSI.org).
ANSI Accreditation Program for Third Party Product Certification Agencies

Application for Accreditation
Administrative Management Systems, Inc. (AMS)
Comment Deadline: November 23, 2009
Administrative Management Systems, Inc. (AMS)
100 West Main
Sackets Harbor, NY 13685
Administrative Management System has submitted formal application for accreditation by ANSI of the following scopes of this certification body:

SCOPES:
1. Certification Program for windows, doors, and skylights; and
2. Certification of Insulating Glass Systems under IGCC Program

Please send your comments by November 23, 2009 to Reinaldo Balbino Figueiredo, Program Director, Product Certifier Accreditation, American National Standards Institute, 1819 L Street, NW, 6th Floor, Washington, DC 20036, FAX: (202) 293-9287, or E-mail: rfigueir@ansi.org.

Initial Accreditation for the Toy Safety Certification Program

Bureau Veritas Consumer Product Services (BVCPS); Intertek Testing Services Hong Kong, Ltd.; NSF; SGSNA; STR-R
Comment Deadline: November 23, 2009
Bureau Veritas Consumer Product Services (BVCPS)
One Distribution Center Circle
Suite #1
Littleton, MA 01460
Intertek Testing Services Hong Kong, Ltd.
2/F, Garment Centre
576 Castle Peak Road
Kowloon, Hong Kong
NSF International (NSF)
789 Dixboro Road
Ann Arbor, MI 48105
SGS North America, Inc. (SGSNA)
201 Route 17 North
Rutherford, NJ 07070
STR-Registrar, LLC (STR-R)
639 Main Street
Stroudsburg, PA 18360

On October 14, 2009, the ANSI Accreditation Committee (ACC) voted to approve initial accreditation for BVCPS, Intertek Testing Services Hong Kong Ltd, NSF, SGSNA, STR-R for the following scope:

SCOPE(S):
Toy Safety Certification Program®

Please send your comments by November 23, 2009 to Reinaldo Balbino Figueiredo, Program Director, Product Certifier Accreditation, American National Standards Institute, 1819 L Street, NW, 6th Floor, Washington, DC 20036, FAX: (202) 293-9287, or E-mail: rfigueir@ansi.org.

ANSI Accreditation Program for Greenhouse Gas Verification/Validation Bodies

Initial Accreditations
KEMA Registered Quality, Inc.
Comment Deadline: November 23, 2009
KEMA Registered Quality, Inc.
Mr. Pierre Salle
4377 County Line Road,
Chalfont, PA 18914
PHONE: (215) 997-4519
E-mail: pierre.salle@kema.com

On October 9, 2009 the ANSI Greenhouse Gas Verification/Validation Accreditation Committee voted to approve initial accreditation for KEMA Registered Quality, Inc. for the following:

Standards:
ISO 14065, Greenhouse gases – Requirements for greenhouse gas validation and verification bodies for use in accreditation or other forms of recognition
ISO 14064-3, Greenhouse gases - Specification with guidance for the validation and verification of greenhouse gas assertions

Protocol:
The Climate Registry, General Verification Protocol, Version 1.0

Scope:
Entity Verification

Please send your comments by November 23, 2009 to Ann Bowles, Program Manager GHG Program, American National Standards Institute, 1819 L Street, NW, 6th Floor, Washington, DC 20036, FAX: (202) 293-9287, or e-mail: abowles@ansi.org.

Ruby Canyon Engineering, Inc.
Committee Deadline: November 23, 2009
Ruby Canyon Engineering, Inc.
Mr. Michael Cote
743 Horizon Court, Suite 385,
Grand Junction, CO 85106
PHONE: (970) 241-9298
E-mail: mcote@rubycanyoneng.com

On October 9, 2009 the ANSI Greenhouse Gas Verification/Validation Accreditation Committee voted to approve initial accreditation for Ruby Canyon Engineering, Inc. for the following:

Standards:
ISO 14065, Greenhouse gases – Requirements for greenhouse gas validation and verification bodies for use in accreditation or other forms of recognition
ISO 14064-3, Greenhouse gases - Specification with guidance for the validation and verification of greenhouse gas assertions
Protocols:
   The Climate Registry, General Verification Protocol,
   Version 1.0
   Chicago Climate Exchange, Coal Mine Methane
Scopes:
   Entity Verification
   Project Verification

Please send your comments by November 23, 2009 to Ann Bowles, Program Manager GHG Program, American National Standards Institute, 1819 L Street, NW, 6th Floor, Washington, DC 20036, FAX: (202) 293-9287, or e-mail: abowles@ansi.org.
BSR/NECA 408-201x Technical Changes

5.9 Busways with Plug-In Devices

f. Orientate busway so that bus plug-in units will have required working space according to Article 110 of the NEC.

1.3 Regulatory and Other Requirements

Only qualified persons familiar with the construction and operation of busways should perform the installations described in this publication. The term “qualified person” is defined in Article 100 of the NEC. Administrative functions and tasks such as receiving, handling and storing, required in Section 4 and other tasks can be performed under the supervision of a qualified person.

3. Safety Procedures

Before performing cleaning, inspections, testing, maintenance, or repairs, electrically isolate conductors and equipment in accordance with established written procedures. All work and actions must conform to the requirements of NFPA 70E, Electrical Safety in the Workplace and applicable Federal and State OSHA Regulations.

The process of de-energizing is considered “live” work and can result in an arc flash due to equipment failure. When de-energizing conductors and equipment follow all safety procedures for working on or near live circuits. Failure to observe these precautions may result in severe personal injury or death. See the applicable warnings and information in Section 3.1 a. through f.

3.3 Personal Protective Equipment (PPE)

a. Use appropriate Personal Protective Equipment (PPE) and established safety procedures when working on or near energized electrical equipment or equipment that has not been de-energized, tested, grounded, locked out of operation, and red tagged in accordance with NFPA 70E. Follow all applicable Federal and State OSHA regulations.

5. Installation Procedures

Prior to the release of the busway to the job site, compare the manufacturer’s shop drawings with field measurements for accuracy. Install electrical busways in accordance with all manufacturer’s installation instructions and within the limitations of the electrical ratings and markings on the equipment.
BSR/NECA 409-201x Technical Changes

1.1 Applications and Products Included

This publication applies to indoor and outdoor, ventilated and non-ventilated, two-winding single-phase and three-phase transformers used for supplying power, heating, and lighting loads for commercial, institutional, and industrial use in non-hazardous locations both indoors and outdoors.

1.3 Regulatory and Other Requirements

Only qualified persons familiar with the construction and operation of dry-type transformers should perform the work described in this publication. The term “qualified person” is defined in Article 100 of the NEC. Administrative functions and tasks such as receiving, handling and storing, required in Section 4 and other tasks can be performed under the supervision of a qualified person.

3. Safety Procedures

Before performing cleaning, inspections, testing, maintenance, or repairs, electrically isolate all conductors and equipment in accordance with established written procedures. All work and actions must conform to the requirements of NFPA 70E, Electrical Safety in the Workplace in addition to all applicable Federal and State OSHA regulations.

The process of de-energizing is considered “live” work and can result in an arc flash due to equipment failure. When de-energizing conductors and equipment, follow safety procedures for working on or near live circuits. Failure to observe these precautions may result in severe personal injury or death. See the applicable warnings and information in Section 3.1 a. through f.

3.1 General

c. Do not work on energized conductors or equipment. Electrically isolate all conductors and equipment in accordance with established procedures and manufacturer’s instructions and recommendations.

3.3 Personal Protective Equipment (PPE)

a. Use appropriate Personal Protective Equipment (PPE) and established safety procedures when working on or near energized electrical equipment or equipment that has not been de-energized, tested, grounded, locked out of operation, and red tagged in accordance with NFPA 70E. Follow all applicable Federal and State OSHA regulations.

4.4 Pre-Installation Checks

a. Compare the manufacturer's shop drawings or wiring diagrams to ensure that the transformer and accessories are connected so that it will perform its intended function. Correct any discrepancies. Compare nameplate ratings and wiring diagram with the manufacturer’s shop drawings.

5.1 Environmental Conditions
g. Install dry-type transformers in accordance with all manufacturer’s installation instructions and all electrical ratings marked on the equipment.

5.2 Coordination with Other Trades

f. Where energized work is anticipated for dry-type transformers install transformers to allow ample working space in accordance with NEC minimums.

5.4 General Installation Requirements

e. Arrange rooms and spaces in which transformers are installed with railings, fences, screens, partitions, walls, or other means or barriers to prevent entrance by unauthorized persons.

6.4.1 Transformer primary and secondary voltages and phase rotation

b. Adjust transformer taps, if so equipped, to match actual primary and specified nominal secondary operating voltages, as required. Remove any insulating material from terminals prior to changing taps.

6.4.2 Energize equipment supplied from the transformer

c. Inspect the transformer for unusual or excessive noise. Electrically isolate the transformer in accordance with established procedures and then investigate hardware that has not been tightened or metal parts that are not properly assembled as possible sources of extraneous noise. Verify that the shipping bolts on the vibration sound dampers have been loosened according to the manufacturer’s instructions.

11.10 Infrared Scan

a. Verify minimum NEC working space is provided for transformer prior to performing thermograph procedures with the transformer in the energized condition.
2.11 GROUNDING

2.11.1 A means shall be provided in each metal box for the connection of an equipment grounding conductor. The means shall be permitted to be a No. 10-32 tapped hole (such as a #10-32) or equivalent. If an A No. 8-32 tapped hole is permitted when a permanent marking is provided immediately adjacent to the hole. Marking “GR”, “GRD”, or IEC 60417-1, Symbol 5019a, meets the intent of this marking used it must be identified and marked.

2.11.2 The grounding means shall be located so that:

a) The means is readily accessible through the opening in the face of the box,

b) The removal of a device mounted in the box does not disturb in any way the continuity of the grounding circuit, and

c) The means is not part of a removable cover, back, or side.

2.11.3 A grounding screw provided with a box shall:

a) Be No. 8-32 or larger,

b) Have a green-colored head,

c) Be plated steel, stainless steel, copper, or copper alloy. Only a plated or stainless steel grounding screw shall be provided in an aluminum box, and

d) Have a head or integral washer with a diameter not smaller than 7.8 mm (0.30 in) for a No. 8 screw and not smaller than 9.1 mm (0.36 in) for a No. 10 screw.

2.11.4 When provided with a box, a grounding screw shall also be provided with a means of laterally retaining a 10 AWG (5.267 mm²) conductor under the head of the screw. The retention means shall be permitted to be an integral feature of the box.

Raised areas of a box provided as the retention means shall permit securement of a 16 AWG (1.31 mm²) conductor.

NOTE: Retention means are intended to ensure that the grounding conductor will not escape from under the head of the ground screw as the ground screw is being tightened.

2.11.4.1 A box having a factory assembled grounding pigtail is not required to have supplemental wire retaining means.
Section 5.8 Fittings and valves

Fittings and valves made from copper alloys containing more than 15% zinc by weight intended for use in plastics piping systems shall be resistant to dezincification and stress corrosion cracking (SCC) and meet the following requirements:

5.8.1 Dezincification resistance

5.8.1.1 Sampling

Three test specimens selected at random shall be conditioned to standard laboratory conditions of 73 +/- 3.6°F (23 +/- 2°C) prior to testing.

5.8.1.2 Testing

Test specimens shall be tested according to ISO 6509 “Corrosion of metal and alloys – Determination of dezincification resistance of brass”.

5.8.1.2 Requirements

The maximum depth of dezincification shall not exceed 200 µm. Failure of one of the three specimens tested is cause for retest of three additional specimens. Failure of one specimen in the retest shall constitute failure in the test.

5.8.2 Stress corrosion resistance
5.8.2.1 Sampling

Three test specimens selected at random shall be conditioned to standard laboratory conditions prior to testing.

5.8.2.2 Testing

Test specimens shall be tested according to ASTM B858 “Standard Test Method for Ammonia Vapor Test for Determining Susceptibility to Stress Corrosion Cracking in Copper Alloys” or ISO 6957 “Copper alloys – Ammonia test for stress corrosion resistance” in a test solution of pH 9.5.

5.8.2.3 Requirements

There shall be no evidence of cracking when viewed with a microscope with a minimum magnification of 10X. Failure of one of the three specimens tested is cause for retest of three additional specimens. Failure of one specimen in the retest shall constitute failure in the test.

Note: The requirements for resistance to dezincification and resistance to stress corrosion cracking are intended to establish a minimum level of performance for products intended for use in potable water systems. These requirements are not a guarantee that erosion or corrosion will not occur.
BSR/UL 618 PROPOSAL

4A.3 The procedure in conducting tests for compressive strength is to be in accordance with Standard Test Methods of for Sampling and Testing Concrete Masonry Units and Related Units, ASTM C140-94a. The compressive strength requirements specified in Table 4A.1 are based on the gross cross sectional area of the unit as laid in a wall when tested not more than 28 days after manufacture.
BSR/UL 746C PROPOSAL

34.1 Table 7.1 of UL 746B, the Standard for Polymeric Materials - Long Term Property Evaluations, presents a list of materials, that have been assigned a generic thermal index based upon acceptable service experience, the chemical structure of the material, and a knowledge of the performance of the material in tests of insulating systems and electrical equipment. The assigned generic thermal index is applicable to each member of the generic material group.

34.2 Except for materials specified in Table 7.1 of UL 746B, the generic thermal index of a material is to be considered 50°C (122°F).

34.3 Except for materials specified in Table 7.1 of UL 746B, the generic thermal index of a material is independent of thickness and pigmentation.

34.4 A polymeric material having a maximum use operating temperature that exceeds the values shown in Table 7.1 of UL 746B, shall be considered acceptable if it complies with the requirements for Functional-Use Temperature Indices (Section 33), Relative Thermal Indices (Section 35), or Relative Thermal Capability (Section 36).

</table>

*Generic thermal index is for homopolymer resins only unless a specific copolymer or blend is indicated. In the case of alloys, the lowest generic index of any component shall be assigned to the composite.

*Includes glass fiber reinforcement and/or talc, asbestos, mineral, calcium carbonate, and other inorganic fillers.

*Includes only compounds molded by high-temperature and high-pressure processes such as injection, compression, pultrusion, and transfer molding and match-metal-die molding; excludes compounds molded by open-mold or low-pressure molding processes such as hand lay-up spray-up, contact bag, filament winding, rotational molding, and powder coating (fluidized bed, electrostatic spray, hot dip, flow coating).

*Includes materials having filler systems of fibrous (other than synthetic organic) types but excludes fiber reinforcement systems using resins that are applied in liquid form. Synthetic organic fillers are to be considered acceptable at temperatures not greater than 105°C.

*Except 130°C generic thermal index if the material retains at least 50% of its unaged dielectric strength after a 504-hour exposure at 180°C in an air circulating oven. Specimens are to be tested in a dry, as-molded condition. Specimens that are removed from the oven are to be cooled over desiccant for at least 2 hours prior to testing.

*Includes only wholly aromatic liquid crystalline thermotropic polyesters; wholly aromatic polyester/amides and wholly aromatic polyester/ethers; excluding amorphous, lyotropic and liquid crystalline aliphatic-aromatic polyesters which are aliphatic in the backbone chain or main chain, and substituted aromatic polyesters (except for methyl or aromatic).

*Includes only polyetherimide molding resin.

*Includes polypropylene copolymers containing not more than 25% ethylene comonomer, by weight.

*Multi-part liquid epoxy materials incorporating acid anhydride or aromatic amine curing agents receive a 130°C generic thermal index.

*Includes only those polyphenylene oxide materials in which the PPO component is not less than 30% of the total composition by weight and that have a Heat Deflection Temperature of at least 70°C at a load (fiber stress) of 1.80 M Pa (264 psi).
1.1 These requirements cover household, and commercial, and industrial air compressors, vacuum pumps, inflators (other than indoor use only), paint sprayers, paint mixers, and paint pigment dispensers intended for indoor or outdoor use or both in accordance with the National Electrical Code, ANSI/NFPA 70. These requirements also cover motor-operated air compressors intended for use with sprinkler systems in accordance with the Standard for Installation of Sprinkler Systems, NFPA 13, and the National Electrical Code, ANSI/NFPA 70.

1.5 These requirements do not cover industrial compressors that are primarily supplied to an individual customer specification with regard to pressure, flow, electrical supply, or optional equipment.
BSR/UL 1450

PROPOSAL

13.1.8 An attached flexible cord provided with the product shall comply with one of the following, as applicable:

a) Stationary equipment shall be provided with an attached flexible cord at least 6 ft (1.8 m) long including the attachment plug.

b) Movable equipment shall be provided with an attached flexible cord at least 18 in (457 mm) long or less including the attachment plug.

c) Hand-held, hand-guided, and hand-supported equipment shall be provided with an attached flexible cord at least 18 in (457 mm) long or less including the attachment plug.

13.1.8.1 With reference to 13.1.8, for all product types that are acceptable for use with an 18 in (457 mm) or less flexible cord, an acceptable extension cord shall be provided with the product, or shall be marked in accordance with 63.3.1, or the instructions shall contain statements for the selection of the correct extension cord type in accordance with 66.3.
