This section solicits public comments on proposed draft new American National Standards, including the national adoption of ISO and IEC standards as American National Standards, and on proposals to revise, reaffirm or withdraw approval of existing American National Standards. A draft standard is listed in this section under the ANSI-accredited standards developer (ASD) that sponsors it and from whom a copy may be obtained. Comments in connection with a draft American National Standard must be submitted in writing to the ASD no later than the last day of the comment period specified herein. Such comments shall be specific to the section(s) of the standard under review and include sufficient detail so as to enable the reader to understand the commenter’s position, concerns and suggested alternative language, if appropriate. Please note that the ANSI Executive Standards Council (ExSC) has determined that an ASD has the right to require that interested parties submit public review comments electronically, in accordance with the developer’s procedures.

Ordering Instructions for “Call-for-Comment” Listings
1. Order from the organization indicated for the specific proposal.
2. Use the full identification in your order, including the BSR prefix; for example, Electric Fuses BSR/SAE J554.
3. Include remittance with all orders.
4. BSR proposals will not be available after the deadline of call for comment.

Comments should be addressed to the organization indicated, with a copy to the Board of Standards Review, American National Standards Institute, 25 West 43rd Street, New York, NY 10036. Fax: 212-840-2298; e-mail: psa@ansi.org

* Standard for consumer products
Comment Deadline: June 24, 2012

ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.)

Addenda

This Addendum covers the addition of a flow turndown requirement to the Standard which will require the use of cooling towers capable of handling modulation of condenser water flow as a means to save energy, and as virtually all heat rejection equipment utilize VSDs on the 7.5 HP fans and above, a requirement to operate the maximum number of fans in a multi-fan installation to minimize energy for a given duty has been added as 6.5.5.2.2.

AAMI (Association for the Advancement of Medical Instrumentation)

New National Adoption

BSR/AAMI ST15883-1-2009/A1-201x, Washer-disinfectors - Part 1: General requirements, terms and definitions and tests, Amendment 1 (identical national adoption of ISO 15883-1:2006/DAmd 1)

This amendment adds new normative references, revises definitions, updates references, provides next text for 5.2 and 5.20, and adds new references to the Bibliography.

Single copy price: Free

NSF (NSF International)

Revision

BSR/NSF 40-201x (i26), Residential Wastewater Treatment Systems (revision of ANSI/NSF 40-2011)

Issue 26: The purpose of this ballot is to update the language in section 8.4.1 for consistency among wastewater standards. The change in section 9 addresses a comment on the ballot 40i20 regarding when adjustments to alkalinity are made, they are required to be reported.

Click here to view these changes in full

Send comments (with copy to psa@ansi.org) to: Mindy Costello, (734) 827-6819, mcostello@nsf.org

NSF (NSF International)

Revision

BSR/NSF 60-201x (i56), Drinking water treatment chemicals - Health effects (revision of ANSI/NSF 60-2011)

The proposed ballot will revise the SPAC value to 0.3 mg/L for chlorate in sodium hypochlorite under ANSI/NSF 60.

Click here to view these changes in full

Send comments (with copy to psa@ansi.org) to: Monica Leslie, (734) 827-5643, mleslie@nsf.org

UL (Underwriters Laboratories, Inc.)

Revision

This proposal includes revisions to the Scope and Applicable Requirements of UL 698A to include AEx Class 1, Zones 0 and 1 and AEx Zones 20 and 21 References.

New National Adoption

BSR/ABMA/ISO 15242-2-201x, Rolling bearings - Measuring methods for vibration - Part 2: Radial ball bearings with cylindrical bore and outside surface (identical national adoption of ISO 15242-2)

Specifies vibration-measuring methods for radial single-row and double-row ball bearings, with a contact angle up to and including 45 degrees, under established test conditions. This standard covers radial ball bearings with cylindrical bore and outside surface, except bearings with filling slots and three- and four-point contact bearings

Single copy price: $38.00

Obtain an electronic copy from: ABMA.Mailbox

ASME (American Society of Mechanical Engineers)

Revision

BSR/ASME B31.8-201x, Gas Transmission and Distribution Piping Systems (revision of ANSI/ASME B31.8-2010)

This Code covers the design, fabrication, installation, inspection, and testing of pipeline facilities used for the transportation of gas. This Code also covers safety aspects of the operation and maintenance of those facilities. (See Appendix Q for scope diagrams.) This Code is concerned only with certain safety aspects of liquefied petroleum gases when they are vaporized and used as gaseous fuels. All of the requirements of NFPA 58 and NFPA 59 and of this Code concerning design, construction, and operation and maintenance of piping facilities shall apply to piping systems handling butane, propane, or mixtures of these gases.

ASME (American Society of Mechanical Engineers)

Revision

BSR/ASME B31.8S-201x, Managing System Integrity of Gas Pipelines (revision of ANSI/ASME B31.8S-2010)

This Code applies to onshore pipeline systems constructed with ferrous materials and that transport gas. The principles and processes embodied in integrity management are applicable to all pipeline systems. This Code is specifically designed to provide the operator (as defined in section 13) with the information necessary to develop and implement an effective integrity management program utilizing proven industry practices and processes. The processes and approaches described within this Code are applicable to the entire pipeline system, including pipelines, compressor stations, regulator stations, metering stations or other facilities used in the transportation of gas. Similar appropriate and approved international standards may be incorporated into the integrity methodology, provided the pipeline operator can demonstrate that safety is at least equivalent or improved.

ITI (INCITS) (InterNational Committee for Information Technology Standards)

New National Adoption

This part of ISO/IEC 9797 specifies three MAC algorithms that use a secret key and a hash-function (or its round-function) with an n-bit result to calculate an m-bit MAC. These mechanisms can be used as data integrity mechanisms to verify that data has not been altered in an unauthorized manner. They can also be used as message authentication mechanisms to provide assurance that a message has been originated by an entity in possession of the secret key.

ITI (INCITS) (InterNational Committee for Information Technology Standards)

New National Adoption

ISO/IEC 9798-1:2010 specifies an authentication model and general requirements and constraints for entity authentication mechanisms which use security techniques. These mechanisms are used to corroborate that an entity is the one that is claimed. An entity to be authenticated proves its identity by showing its knowledge of a secret. The mechanisms are defined as exchanges of information between entities and, where required, exchanges with a trusted third party.

Single copy price: $30.00

Send comments (with copy to psa@ansi.org) to: Rachel Porter, 202-626-5741, rporter@itic.org

ITI (INCITS) (InterNational Committee for Information Technology Standards)

New National Adoption

ISO/IEC 9798-6:2010 specifies eight entity authentication mechanisms based on manual data transfer between authenticating devices. Four of these mechanisms are improved versions of mechanisms specified in ISO/IEC 9798-6:2005 since they use less user input and achieve more security. Such mechanisms can be appropriate in a variety of circumstances where there is no need for an existing public key infrastructure, shared secret keys or passwords.

Single copy price: $30.00

New National Adoption

ISO/IEC 27005:2011 provides guidelines for information security risk management. It supports the general concepts specified in ISO/IEC 27001 and is designed to assist the satisfactory implementation of information security based on a risk management approach. Knowledge of the concepts, models, processes and terminologies described in ISO/IEC 27001 and ISO/IEC 27002 is important for a complete understanding of ISO/IEC 27005:2011. ISO/IEC 27005:2011 is applicable to all types of organizations (e.g., commercial enterprises, government agencies, non-profit organizations) that intend to manage risks that could compromise the organization's information security.

ITI (INCITS) (InterNational Committee for Information Technology Standards)

New National Adoption

This International Standard specifies requirements and provides guidance for bodies providing audit and certification of an information security management system (ISMS), in addition to the requirements contained within ISO/IEC 17021 and ISO/IEC 27001. It is primarily intended to support the accreditation of certification bodies providing ISMS certification.

Single copy price: $30.00

Send comments (with copy to psa@ansi.org) to: Rachel Porter, 202-626-5741, rporter@itic.org

ITI (INCITS) (InterNational Committee for Information Technology Standards)

New National Adoption

This International Standard provides a privacy framework that:
- specifies a common privacy terminology;
- defines the actors and their roles in processing personally identifiable information (PII);
- describes privacy safeguarding considerations; and
- provides references to known privacy principles for information technology.

This International Standard is applicable to natural persons and organizations involved in specifying, procuring, architecting, designing, developing, testing, maintaining, administring, and operating information and communication technology systems or services where privacy controls are required for the processing of PII.

Single copy price: $30.00

ITI (INCITS) (InterNational Committee for Information Technology Standards)

**New National Adoption**

This International Standard establishes a technical base for the security proof of the specification of cryptographic protocols. This International Standard specifies design evaluation criteria for these protocols, as well as methods to be applied in a verification process for such protocols. This International Standard also provides definitions of different protocol assurance levels consistent with evaluation assurance components in ISO/IEC 15408.

Single copy price: $30.00

---

NISO (National Information Standards Organization)

**Revision**

The purpose of this Protocol Implementation Profile 1 (IMP1) is to specify details of implementation of the NISO Circulation Interchange Part 1: Protocol (NCIP). This IMP1 was developed primarily to support three broad application areas: Direct Consortial Borrowing, Circulation/Interlibrary Loan Interchange, and Self Service Circulation. Secondly, the profile was intended for use with emerging application areas such as the management of electronic resources.

New National Adoption
BSR/UL 60335-2-40-201X, Standard for Household And Similar Electrical Appliances, Part 2-40: Particular requirements for electrical heat pumps, air-conditioners and dehumidifiers (national adoption with modifications of IEC 60335-2-40)
This standard covers the safety of electric heat pumps, including sanitary hot-water heat pumps, air-conditioners, and dehumidifiers incorporating motor-compressors and hydronic room fan coils, their maximum rated voltages being not more than 250 V for single-phase appliances and 600 V for all other appliances. Appliances not intended for normal household use but that nevertheless may be a source of danger to the public, such as appliances intended to be used by laymen in shops, in light industry and on farms, are within the scope of this standard. Supplementary heaters, or a provision for their separate installation, are within the scope of this standard.

Projects Withdrawn from Consideration

An accredited standards developer may abandon the processing of a proposed new or revised American National Standard or portion thereof if it has followed its accredited procedures. The following projects have been withdrawn accordingly:

AWWA (American Water Works Association)
BSR/AWWA 15.501-201x, Wastewater Treatment Plant Operations and Management Standards Committee is seeking volunteers in the Producer classifications with wastewater experience. (new standard)

AWWA (American Water Works Association)
BSR/AWWA 15.502-201x, Wastewater Collection System Standards Committee is seeking volunteers in the General Interest, Producer, and User classifications with wastewater experience. (new standard)

AWWA (American Water Works Association)
BSR/AWWA 15.503-201x, Wastewater Pretreatment Standards Committee is seeking volunteers in the General Interest, Producer, and User classifications with wastewater experience. (new standard)

AWWA (American Water Works Association)
BSR/AWWA 15.504-201x, Wastewater Biosolids Standards Committee is seeking volunteers in the General Interest, Producer, and User classifications with wastewater experience. (new standard)

AWWA (American Water Works Association)
BSR/AWWA B30Y-199x, Aqueous Ammonia (new standard)

AWWA (American Water Works Association)
BSR/AWWA B30X-199x, Anhydrous Ammonia (new standard)

AWWA (American Water Works Association)
BSR/AWWA B52X-199x, Sodium Bicarbonate (new standard)

AWWA (American Water Works Association)
BSR/AWWA C2XX-1996, Prestressed Concrete Pressure Pipe, Non-Cylinder Type (new standard)
AWWA (American Water Works Association)
BSR/AWWA C5XB-200x, Large Diameter Butterfly Valves Sizes 78-In. (2000-mm) and Larger (new standard)

AWWA (American Water Works Association)
BSR/AWWA C5BB-2001, Plug Valves (new standard)

AWWA (American Water Works Association)
BSR/AWWA C6ZZ-199x, Installation of Steel Water Pipe (new standard)

AWWA (American Water Works Association)
BSR/AWWA C22X-199x, Fused Polyethylene Coating Systems for the Exterior of Steel Water Pipe (new standard)

AWWA (American Water Works Association)
BSR/AWWA C22Z-2001, Polyamide Coatings (new standard)

AWWA (American Water Works Association)
BSR/AWWA C50Z-199x, Open Channel, Fabricated Metal-Slide Gates (new standard)

AWWA (American Water Works Association)
BSR/AWWA C56X-2001, Fabricated Stainless Steel Slide Gates (new standard)

AWWA (American Water Works Association)
BSR/AWWA C71x-200x, Cold-Water Meters - Singlejet Type (new standard)

AWWA (American Water Works Association)
BSR/AWWA C90x-200x, Polyethylene-Aluminum-Polyethylene Composite Pressure Pipes, 1/2 In. (12 mm) Through 2 In. (50 mm), for Water Service (new standard)

UL (Underwriters Laboratories, Inc.)
BSR/UL 1740-2007 (R201x), Standard for Safety Robots and Robotic Equipment (reaffirmation of ANSI/UL 1740-2007)
Technical Reports Registered with ANSI

Technical Reports Registered with ANSI are not consensus documents. Rather, all material contained in Technical Reports Registered with ANSI is informational in nature. Technical reports may include, for example, reports of technical research, tutorials, factual data obtained from a survey carried out among standards developers and/or national bodies, or information on the "state of the art" in relation to standards of national or international bodies on a particular subject.

Immediately following the end of a 30-day announcement period in Standards Action, the Technical Report will be registered by ANSI. Please submit any comments regarding this registration to the organization indicated, with a copy to the PSA Center, American National Standards Institute, 25 West 43rd Street, New York, NY 10036 or E-Mail to psa@ansi.org.

Comment Deadline: June 24, 2012

ADA (American Dental Association)
ADA Technical Report No. 1054-2012, Electronic Dental Laboratory Prescription Forms (TECHNICAL REPORT) (technical report)
Electronic Dental Laboratory Prescription Forms
This report presents the types of data and electronic formats necessary to compile an electronic dental laboratory prescription form. The report addresses the need for electronic transmission of accurate patient information from the dental practitioner to the laboratory with security and interoperability.

Project Initiation Notification System (PINS)

ANSI Procedures require notification of ANSI by ANSI-accredited standards developers (ASD) of the initiation and scope of activities expected to result in new or revised American National Standards (ANS). Early notification of activity intended to reaffirm or withdraw an ANS and in some instances a PINS related to a national adoption is optional. The mechanism by which such notification is given is referred to as the PINS process. For additional information, see clause 2.4 of the ANSI Essential Requirements: Due Process Requirements for American National Standards.

Following is a list of proposed actions and new ANS that have been received recently from ASDs. Please also review the section in Standards Action entitled "American National Standards Maintained Under Continuous Maintenance" for additional or comparable information with regard to standards maintained under the continuous maintenance option. To view information about additional standards for which a PINS has been submitted and to search approved ANS, please visit www.NSSN.org, which is a database of standards information. Note that this database is not exhaustive.

Directly and materially affected interests wishing to receive more information or to submit comments are requested to contact the standards developer directly within 30 days of the publication of this announcement.

BSR/ASCE/EWRI 12-201x, Standard Guidelines for the Design of Urban Subsurface Drainage (new standard)
Stakeholders: Engineers worldwide who are responsible for the design of urban subsurface drainage, and those in public and private sectors who benefit from urban subsurface drainage.
Project Need: Project need is for state-of-the-art methods and corrections of methods currently found in the literature, all in a single document.
The intent of these standard guidelines is to present state-of-the-art design guidance for urban subsurface drainage in a logical order. The collection and conveyance of subsurface drainage waters are within the purview of these standard guidelines for applications such as airports, roads, and other transportation systems, as well as industrial, commercial, residential, and recreational areas. Incidental surface water is considered. These standard guidelines do not address agricultural drainage, landfills, recharge systems, detention ponds, conventional storm sewer design, or the use of injection systems.

BSR/ASCE/EWRI 13-201x, Standard Guidelines for the Installation of Urban Subsurface Drainage (new standard)
Stakeholders: Engineers and contractors responsible for the installation of urban subsurface drainage, and those in public and private sectors who benefit from urban subsurface drainage.
Project Need: Project need is for state-of-the-art methods and corrections of methods currently found in the literature, all in a single document.
The intent of these standard guidelines is to present state-of-the-art design guidance for urban subsurface drainage in a logical order. The collection and conveyance of subsurface drainage waters are within the purview of these standard guidelines for applications such as airports, roads, and other transportation systems, as well as industrial, commercial, residential, and recreational areas. Incidental surface water is considered. These standard guidelines do not address agricultural drainage, landfills, recharge systems, detention ponds, conventional storm sewer design, or the use of injection systems.
BSR/ASCE/EWRI 14-201x, Standard Guidelines for the Operation and Maintenance of Urban Subsurface Drainage (new standard)
Stakeholders: Those responsible for the operation and maintenance of urban subsurface drainage, and those in public and private sectors who benefit from urban subsurface drainage.
Project Need: Project need is for state-of-the-art methods and corrections of methods currently found in the literature, all in a single document.
The intent of these standard guidelines is to present state-of-the-art design guidance for urban subsurface drainage in a logical order. * BSR/ASSE 1012-201x, Performance Requirements for Backflow Preventers with an Intermediate Atmospheric Vent (revision of ANSI/ASSE 1012-2009)
  Stakeholders: Manufacturers, consumers.
  Project Need: public health and safety
  The devices covered by this standard are those that have functional capabilities for preventing both back-siphonage and back pressure and that can operate under continuous or intermittent pressure conditions. These devices have two (2) independently operating check valves, separated by an intermediate chamber with a means for automatically venting it to the atmosphere and can be installed in the horizontal, vertical up or vertical down orientations. The check valves are force loaded to a normally closed position and the venting means is force loaded to a normally open position.

* BSR/ASSE 1030-201x, Performance Requirements for Positive Pressure Reduction Devices for Sanitary Drainage Systems (revision of ANSI/ASSE 1030-2010)
  Stakeholders: Manufacturers, consumers.
  Project Need: public health and safety
  The device consists of a variable volume reservoir contained within a ventilated rigid outer casing with an inlet connection by which the reservoir inflates when subject to positive pressure. In its inactive state, the flexible reservoir is deflated. Expansion only occurs in response to an increase in line pressure at the entrance to the device. This expansion provides a variable volume reservoir for air. The device connects to the drainage network via an airtight seal to prevent the diversion of airflow from entering the reservoir. As a result the reservoir becomes an integral part of the drainage network.

* BSR/ASSE 1055-201x, Performance Requirements for Chemical Dispensing Systems (revision of ANSI/ASSE 1055-2009)
  Stakeholders: Manufacturers, consumers.
  Project Need: public health and safety
  This standard applies to those devices classified as chemical dispensing systems having a self-contained means of backflow protection.

  Stakeholders: Communications Industry.
  Project Need: To provide a format and structure for assigning serial numbers to telecommunications infrastructure.
  This standard provides a format and structure for assigning serial numbers to telecommunications infrastructure.
weld repair of pressure containing components such as hydraulic those consisting of carbon and low-alloy steels. Allowable unit stresses are recommended for the applicable base metals that are limited to existing components. Filler metals and weld procedure specifications Requirements are presented for the design and fabrication of cyclically BS...
BSR/AWWA B303-201x, Sodium Chlorite (revision of ANSI/AWWA B303-2010)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide purchasers, manufacturers, and suppliers with the minimum requirements for sodium chlorite, including physical, chemical, sampling, packaging, shipping, and testing requirements.

This standard describes sodium chlorite, in either solid (granular, flake, or powdered) or aqueous-solution form, for use in making chlorine dioxide for use in the treatment of potable water, wastewater, and reclaimed water. Sodium chlorite must be packaged, labeled, and registered according to the Federal Insecticide, Fungicide, and Rodenticide Act as administered by the US Environmental Protection Agency (USEPA).

BSR/AWWA B403-201x, Aluminum Sulfate - Liquid, Ground, or Lump (revision of ANSI/AWWA B403-2009)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for aluminum sulfate, including physical, chemical, sampling, testing, packaging, and shipping requirements.

This standard describes purified aluminum sulfate in liquid, ground, or lump form for use in water and wastewater treatment.

BSR/AWWA B408-201x, Liquid Polyaluminum Chloride (revision of ANSI/AWWA B408-2010)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for liquid PACI, including physical, chemical, sampling, testing, packaging, and shipping requirements.

This standard describes polyaluminum chloride (PACI) in aqueous (liquid) form for use in the treatment of potable water, wastewater, and reuse or reclaimed water.

BSR/AWWA B451-201x, Poly(Diallyldimethylammonium Chloride) (revision of ANSI/AWWA B451-2010)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for polyDADMAC products, including physical, chemical, packaging, shipping, and testing requirements, and to provide the means of developing requirements for specific polyDADMAC products.

This standard describes poly(diallyldimethylammonium chloride) for use in water supply service applications and wastewater service applications.

BSR/AWWA B511-201x, Potassium Hydroxide (revision of ANSI/AWWA B511-2010)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for potassium hydroxide, including physical, chemical, sampling, packaging, shipping, and testing requirements.

This standard describes the use of potassium hydroxide (KOH), dry and liquid, for use in the treatment of potable, wastewater, and reuse or reclaimed water.

BSR/AWWA B550-201x, Calcium Chloride (revision of ANSI/AWWA B550-2010)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for calcium chloride, including physical, chemical, sampling, packaging, and shipping requirements.

This standard describes calcium chloride, CaCl₂, in powder, pellet, granule, flake, or briquette form for use in the treatment of potable water, wastewater, and reuse or reclaimed water.

BSR/AWWA B603-201x, Permanganates (revision of ANSI/AWWA B603-2010)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for dry potassium permanganate crystals and liquid sodium permanganate solutions, including physical, chemical, sampling, testing, packaging, and shipping requirements.

This standard describes both dry potassium permanganate (K₂MnO₄) crystals, CAS No. 7722-64-7, as well as liquid sodium permanganate (Na₂MnO₄) solutions, CAS No. 10101-50-5, for use in the treatment of potable and reuse or reclaimed water and wastewater.

BSR/AWWA C215-201x, Extruded Polyolefin Coatings for the Exterior of Steel Water Pipelines (revision of ANSI/AWWA C215-2010)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide purchasers, manufacturers, and constructors with the minimum requirements for extruded polyolefin coatings for steel water pipe, including material, application, inspection, testing, marking, handling, and packaging requirements.

This standard describes the materials, systems, and application requirements for shop-applied, extruded polyolefin coatings for the exterior of steel water pipe up to 144 in. (3,650 mm) diameter.

BSR/AWWA C217-201x, Petrolatum and Petroleum Wax Tape Coatings for the Exterior of Connections and Fittings for Steel Water Pipelines (revision of ANSI/AWWA C217-2009)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide purchasers, manufacturers, and constructors with the minimum performance requirements for cold-applied petrolatum tape and petroleum wax tape coatings, including material, application, inspection, testing, marking, and packaging requirements.

This standard establishes minimum requirements for cold-applied petrolatum tape and petroleum wax tape coatings used on the exterior of steel water pipelines. This standard describes exterior coatings that consist of cold-applied petrolatum or petroleum wax primer, petrolatum or petroleum wax saturated tape coatings, and their applications to special sections, connections, and fittings to be used with buried, submerged, and aboveground steel water pipelines.
BSR/AWWA C600-201x, Installation of Ductile-Iron Mains and Their Appurtenances (revision of ANSI/AWWA C600-2010)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for the installation of ductile-iron potable water, wastewater, and reclaimed water mains and their appurtenances, including materials, dimensions, tolerances, and testing procedures.

This standard describes installation procedures for ductile-iron mains and their appurtenances for potable water, wastewater, and reclaimed water.

BSR/AWWA C655-201x, Field Dechlorination (revision of ANSI/AWWA C655-2009)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to define the minimum procedures for the dechlorination of chlorinated or chloraminated water being discharged, including regulations, discharge site preparation, sampling and testing of discharge water, various methods of dechlorination, and dechlorination chemicals.

This standard describes procedures, materials, and requirements for the dechlorination of chlorinated or chloraminated water discharges.

BSR/AWWA C670-201x, Online Chlorine Analyzer Operation and Maintenance (revision of ANSI/AWWA C670-2009)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for online chlorine analyzer O&M, sampling requirements, accuracy and precision testing requirements, range requirements, and methods of calibration and trouble-shooting.

This standard describes online chlorine analyzer operation and maintenance (O&M) when the online chlorine analyzer is used in the treatment and monitoring of potable water, reclaimed water, or wastewater.

BSR/AWWA C702-201x, Cold-Water Meters - Compound Type (revision of ANSI/AWWA C702-2010)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for compound-type cold-water meters, including materials and design.

This standard describes the various types and classes of cold-water compound-type meters in sizes 2 in. (50 mm) through 8 in. (200 mm), and the materials and workmanship used in their fabrication.

Compound meters shall consist of a combination of a turbine-type, mainline meter for measuring high rates of flow and a bypass meter of an appropriate size for measuring low rates of flow. The compound meter shall have an automatic valve mechanism for diverting low rates of flow through the bypass meter.

BSR/AWWA C706-201x, Direct-Reading, Remote-Registration Systems for Cold-Water Meters (revision of ANSI/AWWA C706-2010)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for direct-reading, remote-registration systems for cold-water meters, including fabrication and assembly.

This standard covers direct-reading, remote-registration systems for use on cold-water meters for water utility customer service and the materials and workmanship employed in the fabrication and assembly of these systems.

BSR/AWWA C707-201x, Encoder-Type Remote-Registration Systems for Cold-Water Meters (revision of ANSI/AWWA C707-2010)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for encoder-type remote-registration systems for cold-water meters, including fabrication and assembly.

This standard covers encoder-type remote-registration systems for use on cold-water meters for water-utility customer service, particularly, the materials and workmanship employed in the fabrication and assembly of the on-meter registers.

BSR/AWWA C712-201x, Cold-Water Meters - Singlejet Type (revision of ANSI/AWWA C712-2010)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for cold-water singlejet meters, including material and design.

This standard describes the various types and classes of cold-water, singlejet meters in sizes 5/8 in. (15 mm) through 6 in. (150 mm) for water utilities’ customer service and the materials and workmanship employed in their fabrication. These meters register by recording the revolutions of a rotor powered by the force of flowing water striking its blades.
BSR/AWWA C713-201x, Cold-Water Meters - Fluidic-Oscillator Type (revision of ANSI/AWWA C713-2010)
Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide minimum requirements for cold-water meters - fluidic-oscillator type, including material and design.

This standard describes cold-water fluidic-oscillator meters with brass main cases in sizes 1/2 in. (13 mm) through 2 in. (50 mm) and the materials and workmanship employed in their fabrication. The basis for volume measurement is a transducer element that senses and utilizes fluidic oscillation rather than a moving measurement element, as required in traditional cold-water volumetric meters.

BSR/AWWA C750-201x, Transit-Time Flowmeters in Full Closed Conduits (revision of ANSI/AWWA C750-2010)
Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide purchasers, manufacturers, and suppliers with the minimum requirements for transit-time flowmeters, including components, performance, calibration, and verification.

This standard describes transit-time ultrasonic Flowmeters for water supply service application in pipes running full. An ultrasonic flowmeter is a meter that uses acoustic energy signals to measure liquid velocity. There are currently two distinct types of ultrasonic flowmeters available: Doppler-effect and transit-time.

BSR/AWWA C105/A21.5-201x, Polyethylene Encasement for Ductile-Iron Pipe Systems (revision of ANSI/AWWA C105/A21.5-2010)
Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for polyethylene sheet and tubes to be used for external corrosion protection of buried ductile-iron pipe, fittings, and appurtenances.

This standard describes materials and installation procedures for polyethylene encasement to be applied to underground installations of ductile-iron pipe. This standard also may be used for polyethylene encasement of fittings, valves, and other appurtenances to ductile-iron pipe systems.

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide purchasers, manufacturers, and applicators with the minimum requirements for fusion-bonded epoxy coatings and linings for the interior and exterior of fittings.

This standard describes protective fusion-bonded epoxy coatings for the interior and exterior surfaces of ductile-iron and gray-iron fittings used for water, wastewater, and reclaimed water systems. This standard describes the material, application, and performance requirements for these coatings. This standard does not describe coatings agreed on between the purchaser and the manufacturer for special service conditions, such as saltwater, sewers, acid, high temperature, and so forth.

BSR/AWWA C151/A21.51-201x, Ductile-Iron Pipe, Centrifugally Cast (revision of ANSI/AWWA C151/A21.51-2009)
Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for ductile-iron pipe, centrifugally cast, for water, wastewater, and reclaimed water systems. This standard describes 3-in. through 64-in. (76-mm through 1,600-mm) ductile-iron pipe, centrifugally cast, for water, wastewater, and reclaimed water systems with push-on joints or mechanical joints. Requirements for pipe according to this standard are discussed in the text and are shown in Tables 1 through 7 and Figures 1, 2, and 3. This standard may be used for pipe with other types of joints as may be agreed on at the time of purchase.

BSR/AWWA D104-201x, Automatically Controlled, Impressed-Current Cathodic Protection for the Interior Submerged Surfaces of Steel Water Storage Tanks (revision of ANSI/AWWA D104-2010)
Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for automatically controlled, impressed-current cathodic protection for the interior submerged surfaces of steel water storage tanks, including design, system components, quality of work, installation, operation, and maintenance.

This standard describes automatically controlled, impressed-current cathodic protection systems intended to minimize corrosion of interior submerged surfaces of steel water storage tanks and 30-in. (750-mm) diameter and larger wet risers of elevated tanks.

BSR/AWWA D106-201x, Sacrificial Anode Cathodic Protection Systems for the Interior Submerged Surfaces of Steel Water Storage Tanks (revision of ANSI/AWWA D106-2010)
Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for sacrificial anode cathodic protection systems for the interior submerged surfaces of steel water storage tanks, including design, system components, quality of work, installation, operation, and maintenance.

This standard describes sacrificial anode cathodic protection systems intended to minimize corrosion of interior submerged surfaces of steel water storage tanks. This standard does not describe automatically or manually controlled impressed current systems.

BSR/AWWA D107-201x, Composite Elevated Tanks for Water Storage (revision of ANSI/AWWA D107-2010)
Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for the design, construction, inspection, and testing of composite elevated tanks used for water storage in a water distribution system.

This standard describes the design, construction, inspection, and testing of composite elevated tanks that use a welded steel tank for watertight containment and a single pedestal concrete support structure. Requirements for the steel tank, concrete support structure, foundation, and accessories are included. Site selection and procurement; tank sizing; postcommissioning inspection and maintenance; and the design, operation, and control of the water distribution system that connects to the composite elevated tank are beyond the scope of this standard.

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide purchasers, manufacturers, and suppliers with the minimum requirements for aluminum domes for water storage tanks, including design, system components, and workmanship and installation.

This standard establishes minimum criteria for the design, fabrication, and erection of structurally supported aluminum dome roofs. Aluminum dome roofs can be used on any size tank erected in accordance with AWWA standards. When this standard is specified, in the case of conflict between this standard and any other standard, the requirements of this standard shall govern.

BSR/AWWA D120-201x, Thermosetting Fiberglass-Reinforced Plastic Tanks (revision of ANSI/AWWA D120-2009)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to purchaser, manufacturers, and suppliers with the minimum requirements for thermosetting FRP tanks, including material and design.

This standard describes the composition, performance requirements, construction practices and workmanship, design, and methods of testing thermosetting fiberglass-reinforced plastic (FRP) tanks for the storage of water or other liquids used in water supply service.

BSR/AWWA G200-201x, Distribution Systems Operation and Management (revision of ANSI/AWWA G200-2009)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to define the critical requirements for the operation and management of water distribution systems, including maintaining water quality, system management programs, and operation and maintenance of facilities.

This standard describes the critical requirements for the effective operation and management of drinking water distribution systems.

BSR/AWWA G400-201x, Utility Management System (revision of ANSI/AWWA G400-2009)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to define the minimum requirements for establishing a utility management system for a water or wastewater utility that will promote continuous improvement.

This standard covers the essential requirements for an effective utility management system.

BSR/AWWA G410-201x, Business Practices for Operation and Management (revision of ANSI/AWWA G410-2009)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to provide the minimum requirements for automatically controlled, impressed-current cathodic protection for the interior submerged surfaces of steel water storage tanks, including design, system components, quality of work, installation, operation, and maintenance.

The purpose of this standard is to establish criteria for how water and wastewater utilities develop, measure the performance of, and improve the strategic planning, resource management, and support functions necessary to create and sustain a high-performing organization. This standard describes the framework that successful utilities should use in developing and improving the performance of these business practices.

BSR/AWWA G420-201x, Communications and Customer Relations (revision of ANSI/AWWA G420-2009)

Stakeholders: Drinking water treatment and supply industry. Water utilities, consulting engineers, water treatment equipment manufacturers, etc.

Project Need: The purpose of this standard is to define the minimum requirements for establishing an effective communications and customer relations plan for a water and/or wastewater utility. An effective plan enhances the general public perception of the utility through frequent and focused communications with utility customers and stakeholders.

This standard covers the essential requirements to effectively manage communications and customer relations.

IAPMO (Z) (International Association of Plumbing & Mechanical Officials)
Office: 5001 East Philadelphia Street
Ontario, CA 91761-2816
Contact: Abraham Murra
Fax: (909) 472-4150
E-mail: Abraham.murra@iapmort.org

BSR/IAPMO S3002-201x, Solar System Component Testing (new standard)

Stakeholders: Producers, users, general interest.

Project Need: To characterize the performance of solar systems by means of computer modeling, the operational characteristics of individual system components must be known. A standardized methodology is needed for the measurement and use of data derived from tests which quantify component operational characteristics based on a number of dynamic operating parameters which include temperature, pressure, heat loss, heat transfer, electricity consumption, flow rate, fluid density, irradiance and time.

This standard will establish measurement criteria required to define the operational characteristics of individual components of solar systems (e.g., storage tanks, heat exchangers, pumps, electronic controls, sensing devices, valves, and insulation). This standard will establish protocols for the acquisition and use of measured operational data within the context of a computer software-based performance modeling regime, allowing for the energy balance in a solar system to be accurately modeled and predicted.

ITI (INCITS) (InterNational Committee for Information Technology Standards)
Office: 1101 K Street NW, Suite 610
Washington, DC 20005
Contact: Rachel Porter
Fax: 202-638-4922
E-mail: rporter@itic.org

Stakeholders: ICT Industry.

Project Need: Adoption of this International Standard will be beneficial to the ICT industry.

ISO/IEC 11770-1:2010 defines a general model of key management that is independent of the use of any particular cryptographic algorithm. However, certain key distribution mechanisms can depend on particular algorithm properties, for example, properties of asymmetric algorithms. ISO/IEC 11770-1:2010 contains the material required for a basic understanding of subsequent parts. Examples of the use of key management mechanisms are included in ISO 11568. If non-repudiation is required for key management, ISO/IEC 13888 is applicable.
ISO/IEC 15408-2:2008 defines the content and presentation of the security functional requirements to be assessed in a security evaluation using ISO/IEC 15408. It contains a comprehensive catalogue of predefined security functional components that will meet most common security needs of the marketplace. These are organized using a hierarchical structure of classes, families and components, and supported by comprehensive user notes.

Project Need: Adoption of this International Standard will be beneficial to the ICT Industry.

Stakeholders: ICT Industry.

This International Standard is a companion document to the evaluation criteria for IT security defined in ISO/IEC 15408. It defines the minimum actions to be performed by an evaluator in order to conduct an ISO/IEC 15408 evaluation, using the criteria and evaluation evidence defined in ISO/IEC 15408. This International Standard does not define evaluator actions for certain high assurance ISO/IEC 15408 components, where there is as yet no generally agreed guidance.

Project Need: Adoption of this International Standard will be beneficial to the ICT Industry.

Stakeholders: ICT Industry.

TAPPI (Technical Association of the Pulp and Paper Industry)

Office: 15 Technology Parkway South
Norcross, GA 30092

Contact: Charles Bohanan
Fax: (770) 446-6947
E-mail: standards@tappi.org

BSR/TAPPI T 459 om-201x, Surface strength of paper (wax pick test) (new standard)

Stakeholders: Manufacturers of pulp, paper, packaging, or related products, consumers or converters of such products, and suppliers of equipment, supplies, or raw materials for the manufacture of such products.

Project Need: To conduct required five-year review of an existing TAPPI standard in order to revise if needed to address new technology or correct errors.

This method, applicable to uncoated and coated papers, is designed to measure the surface strength of paper or its resistance to picking. It is not applicable to loosely felted papers such as blotters or roofing felts nor to some coated papers containing thermoplastic resins in the coating adhesive.

BSR/TAPPI T 572 om-201x, Accelerated pollutant aging of printing and writing paper by pollution chamber exposure apparatus (new standard)

Stakeholders: Manufacturers of pulp, paper, packaging, or related products, consumers or converters of such products, and suppliers of equipment, supplies, or raw materials for the manufacture of such products.

Project Need: To conduct required five-year review of an existing TAPPI standard in order to revise if needed to address new technology or correct errors.

This standard practice describes a laboratory procedure for the exposure of printing and writing paper to the common atmospheric pollutant gas nitrogen dioxide at elevated levels of concentration to permit accelerated aging of such paper.

TIA (Telecommunications Industry Association)

Office: 2500 Wilson Boulevard, Suite 300
Arlington, VA 22201

Contact: Marianna Kramarikova
E-mail: mkramarikova@tiaweb.org

BSR/TIA 102.CAAA-D-201x, Digital C4FM/CQPSK Transceiver Measurement Methods (revision and redesignation of ANSI/TIA 102. CAAA-C-2008)

Stakeholders: Public Safety Radio Users.

Project Need: Provide updates for an existing standard.

Upgrade of TIA-102.CAAA-C to correct typographical errors and to incorporate TIA-102.CAAA-C-1 Addendum. Also change test equipment requirements and measurement methods for receiver adjacent channel rejection and delay spread capability. Also, add test for receiver blocking.
American National Standards Maintained Under Continuous Maintenance

The ANSI Essential Requirements: Due Process Requirements for American National Standards provide two options for the maintenance of American National Standards (ANS): periodic maintenance (see clause 4.7.1) and continuous maintenance (see clause 4.7.2). Continuous maintenance is defined as follows:

The standard shall be maintained by an accredited standards developer. A documented program for periodic publication of revisions shall be established by the standards developer. Processing of these revisions shall be in accordance with these procedures. The published standard shall include a clear statement of the intent to consider requests for change and information on the submittal of such requests. Procedures shall be established for timely, documented consensus action on each request for change and no portion of the standard shall be excluded from the revision process. In the event that no revisions are issued for a period of four years, action to reaffirm or withdraw the standard shall be taken in accordance with the procedures contained in the ANSI Essential Requirements.

The Executive Standards Council (ExSC) has determined that for standards maintained under the Continuous Maintenance option, separate PINS announcements are not required. The following ANSI Accredited Standards Developers have formally registered standards under the Continuous Maintenance option.

- AAMI (Association for the Advancement of Medical Instrumentation)
- AAMVA (American Association of Motor Vehicle Administrators)
- AGA (American Gas Association)
- AGRSS, Inc. (Automotive Glass Replacement Safety Standards Committee, Inc.)
- ASC X9 (Accredited Standards Committee X9, Incorporated)
- ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.)
- ASME (American Society of Mechanical Engineers)
- ASTM (ASTM International)
- GEIA (Greenguard Environmental Institute)
- HL7 (Health Level Seven)
- MHI (ASC MH10) (Material Handling Industry)
- NAHBRC (NAHB Research Center, Inc.)
- NBBPVI (National Board of Boiler and Pressure Vessel Inspectors)
- NCPDP (National Council for Prescription Drug Programs)
- NISO (National Information Standards Organization)
- NSF (NSF International)
- TIA (Telecommunications Industry Association)
- UL (Underwriters Laboratories, Inc.)

To obtain additional information with regard to these standards, such as contact information at the ANSI accredited standards developer, please visit ANSI Online at www.ansi.org, select Internet Resources, click on "Standards Information," and see "American National Standards Maintained Under Continuous Maintenance". This information is also available directly at www.ansi.org/publicreview.

Alternatively, you may contact the Procedures & Standards Administration Department (PSA) at psa@ansi.org or via fax at 212-840-2298. If you request that information be provided via E-mail, please include your E-mail address; if you request that information be provided via fax, please include your fax number. Thank you.

ISO Draft International Standards

This section lists proposed standards that the International Organization for Standardization (ISO) is considering for approval. The proposals have received substantial support within the technical committees or subcommittees that developed them and are now being circulated to ISO members for comment and vote. Standards Action readers interested in reviewing and commenting on these documents should order copies from ANSI.

Comments
Comments regarding ISO documents should be sent to Karen Hughes, at ANSI's New York offices (isot@ansi.org). The final date for offering comments is listed after each draft.

Ordering Instructions
ISO Drafts can be made available by contacting ANSI's Customer Service department. Please e-mail your request for an ISO Draft to Customer Service at sales@ansi.org. When making your request, please provide the date of the Standards Action issue in which the draft document you are requesting appears.

ACOUSTICS (TC 43)
ISO/DIS 12999-1, Acoustics - Determination and application of measurement uncertainties in building acoustics - Part 1: Sound insulation - 8/18/2012, $71.00

CRANES (TC 96)
ISO/DIS 17440, Cranes - General Design - Limit states and proof of competence of forged steel hooks - 8/21/2012, $146.00

EQUIPMENT FOR FIRE PROTECTION AND FIRE FIGHTING (TC 21)
ISO/DIS 6182-10, Fire protection - Automatic sprinkler systems - Part 10: Requirements and test methods for domestic sprinklers - 8/16/2012, $125.00

INTERNAL COMBUSTION ENGINES (TC 70)
ISO/DIS 15619, Reciprocating internal combustion engines - Measurement method for exhaust silencers - Sound power level of exhaust noise and insertion loss using sound pressure and power loss ratio - 8/17/2012, $88.00

LIFTS, ESCALATORS, PASSENGER CONVEYORS (TC 178)
ISO/DIS 22559-1, Safety requirements for lifts (elevators) - Part 1: Global essential safety requirements (GESRs) - 8/16/2012, $155.00

MACHINE TOOLS (TC 39)
ISO/DIS 14955-1, Machine tools - Environmental evaluation of machine tools - Part 1: Design methodology for energy-efficient machine tools - 8/1/2012, $125.00

MECHANICAL CONTRACEPTIVES (TC 157)
ISO/DIS 4074, Natural rubber latex male condoms - Requirements and test methods - 8/18/2012, $125.00

NUCLEAR ENERGY (TC 85)
ISO/DIS 12749-2, Nuclear energy, nuclear technologies, and radiological protection - Vocabulary - Part 2: Radiological protection - 8/21/2012, $107.00

PLASTICS PIPES, FITTINGS AND VALVES FOR THE TRANSPORT OF FLUIDS (TC 138)
ISO/DIS 11297-1, Plastics piping systems for renovation of underground drainage and sewerage networks under pressure - Part 1: General - 8/18/2012, $71.00
ISO/DIS 11297-3, Plastics piping systems for renovation of underground drainage and sewerage networks under pressure - Part 3: Lining with close-fit pipes - 8/18/2012, $67.00

QUALITY MANAGEMENT AND QUALITY ASSURANCE (TC 176)
ISO/DIS 10008, Quality Management - Customer satisfaction - Guidelines for business-to-consumer electronic commerce transactions - 8/19/2012, $102.00

SOIL QUALITY (TC 190)
ISO/DIS 13876, Soil quality - Determination of polychlorinated biphenyls (PCB) by gas chromatography with mass selective detection (GC-MS) and gas chromatography with electron-capture detection (GC-ECD) - 8/21/2012, $98.00
SURFACE CHEMICAL ANALYSIS (TC 201)

ISO/DIS 16531, Surface chemical analysis - Depth profiling - Methods for ion beam alignment and the associated measurement of current or current density for depth profiling in AES and XPS - 8/15/2012, $67.00

TRANSPORT INFORMATION AND CONTROL SYSTEMS (TC 204)

ISO/DIS 15638-7, Intelligent transport systems - Framework for collaborative Telematics Applications for Regulated commercial freight Vehicles (TARV) - Part 7: Other applications - 8/16/2012, $112.00

ISO/IEC JTC 1, Information Technology

ISO/IEC DIS 20005, Information technology - Sensor networks - Services and interfaces supporting collaborative information processing in intelligent sensor networks - 8/16/2012, $119.00

ISO/IEC FDIS 13818-2, Information technology - Generic coding of moving pictures and associated audio information: Video - Part 2: Amendment 1: Frame packing arrangement signalling for quincunx pattern - 8/15/2012, $203.00

ISO/IEC DIS 24769-2, Information technology - Real-time locating system (RTLS) device conformance test methods - Part 2: Test methods for air interface communication at 2,4 GHz - 8/16/2012, FREE

ISO/IEC DIS 29182-1, Information technology - Sensor networks: Sensor network reference architecture (SNRA) - Part 1: General overview and requirements - 8/16/2012, $46.00

ROAD VEHICLES (TC 22)

ISO/IEC CD 15118-2, Road vehicles - Vehicle to grid communication interface - Part 2: Network and application protocol requirements - 8/19/2012, $215.00
Newly Published ISO Standards

Listed here are new and revised standards recently approved and promulgated by ISO - the International Organization for Standardization. Most are available at the ANSI Electronic Standards Store (ESS) at www.ansi.org. All paper copies are available from Standards resellers (http://webstore.ansi.org/faq.aspx#resellers).

AGRICULTURAL FOOD PRODUCTS (TC 34)
ISO 15163:2012, Milk and milk products - Calf rennet and adult bovine rennet - Determination by chromatography of chymosin and bovine pepsin contents, $98.00

CORROSION OF METALS AND ALLOYS (TC 156)
ISO 9227:2012, Corrosion tests in artificial atmospheres - Salt spray tests, $98.00

GLASS IN BUILDING (TC 160)
ISO 12543-6/Cor1:2012, Glass in building - Laminated glass and laminated safety glass - Part 6: Appearance - Corrigendum 1, FREE

NATURAL GAS (TC 193)

ROAD VEHICLES (TC 22)
ISO 13296:2012, Diesel engines - High-pressure fuel injection pipe assemblies - General requirements and dimensions, $73.00
ISO 11452-9:2012, Road vehicles - Component test methods for electrical disturbances from narrowband radiated electromagnetic energy - Part 9: Portable transmitters, $149.00

ISO 13044-1:2012, Road vehicles - 24 V fully automatic coupling systems (FACS) for heavy commercial vehicle combinations - Part 1: General requirements and definitions, $49.00

ROLLING BEARINGS (TC 4)
ISO 10285/Amd1:2012, Rolling bearings - Sleeve type linear ball bearings - Boundary dimensions and tolerances - Amendment 1, $16.00

SHIPS AND MARINE TECHNOLOGY (TC 8)
ISO 30005:2012, Ships and marine technology - Ship recycling management systems - Information control for hazardous materials in the manufacturing chain of shipbuilding and ship operations, $110.00

SMALL TOOLS (TC 29)
ISO 666:2012, Machine tools - Mounting of grinding wheels by means of hub flanges, $86.00

SOCIETAL SECURITY (TC 223)
ISO 22300:2012, Societal security - Terminology, $73.00

ISO Technical Specifications
TERMINOLOGY (PRINCIPLES AND COORDINATION) (TC 37)
ISO/TS 11669:2012, Translation projects - General guidance, $129.00
Proposed Foreign Government Regulations

Call for Comment

U.S. manufacturers, exporters, regulatory agencies and standards developing organizations may be interested in proposed foreign technical regulations issued by Member countries of the World Trade Organization (WTO). In accordance with the WTO Agreement on Technical Barriers to Trade (TBT Agreement), Members are required to report proposed technical regulations that may significantly affect trade to the WTO Secretariat in Geneva, Switzerland. In turn, the Secretariat disseminates the information to all WTO Members. The purpose of this requirement is to provide global trading partners with an opportunity to review and comment on the regulations before they become final.

The National Center for Standards and Certification Information (NCSCI) at the National Institute of Standards and Technology (NIST), distributes these proposed foreign technical regulations to U.S. stakeholders via an online service, Notify U.S. Notify U.S. is an e-mail and Web service that allows interested U.S. parties to register, obtain notifications, and read full texts of regulations from countries and for industry sectors of interest to them. To register for Notify U.S., please go to Internet URL: http://www.nist.gov/notifyus/ and click on “Subscribe”.

NCSCI is the WTO TBT Inquiry Point for the U.S. and receives all notifications and full texts of regulations to disseminate to U.S. Industry. For further information, please contact: NCSCI, NIST, 100 Bureau Drive, Gaithersburg, MD 20899-2160; Telephone: (301) 975-4040; Fax: (301) 926-1559; E-mail: ncsci@nist.gov or notifyus@nist.gov.

Information Concerning

American National Standards

INCITS Executive Board

ANSI Accredited SDO and US TAG to ISO/IEC JTC 1, Information Technology

The InterNational Committee for Information Technology Standards (INCITS), an ANSI accredited SDO, is the forum for information technology developers, producers and users for the creation and maintenance of formal de jure IT standards. INCITS’ mission is to promote the effective use of Information and Communication Technology through standardization in a way that balances the interests of all stakeholders and increases the global competitiveness of the member organizations.

The INCITS Executive Board serves as the consensus body with its oversight of programs of its 40+ Technical Committees. Additionally, the INCITS Executive Board exercises international leadership in its role as the US Technical Advisory Group (TAG) to ISO/IEC JTC 1, Information Technology.

The INCITS Executive Board seeks to broaden its membership base and is recruiting new participants in the following membership categories:

- special interest (user, academic, consortia)
- non-business (government and major/minor SDOs)

Membership in the INCITS Executive Board is open to all directly and materially affected parties in accordance with INCITS membership rules. To find out more about participating on the INCITS Executive Board, please contact Jennifer Garner at 202-626-5737 or jgarner@itic.org. Visit www.INCITS.org for more information regarding INCITS activities.

Calls for Members

Society of Cable Telecommunications

ANSI Accredited Standards Developer

SCTE, an ANSI-accredited SDO, is the primary organization for the creation and maintenance of standards for the cable telecommunications industry. SCTE’s standards mission is to develop standards that meet the needs of cable system operators, content providers, network and consumer premises equipment manufacturers, and all others who have an interest in the industry through a fair, balanced and transparent process.

SCTE is currently seeking to broaden its membership base of its ANSI consensus bodies and is interested in new members in all membership categories to participate in new work in fiber-optic networks, advanced advertising, 3D television, and other important topics. Of particular interest is membership from the content (program and advertising) provider and user communities.

Membership in the SCTE Standards Program is open to all directly and materially affected parties as defined in SCTE’s membership rules and operating procedures. More information is available at www.scte.org or by email from standards@scte.org.

ANSI Accredited Standards Developers

Administrative Reaccreditation

Portable Generator Manufacturers Association (PGMA)

At the direction of ANSI’s Executive Standards Council (ExSC), the reaccreditation of the Portable Generator Manufacturers Association (PGMA), an ANSI Organizational Member, has been administratively approved under its recently revised operating procedures for documenting consensus on PGMA-sponsored American National Standards, effective May 18, 2012. For additional information, please contact: Mr. Joseph Harding, Technical Director, Portable Generator Manufacturers Association, 1300 Sumner Avenue, Cleveland, OH 44115-2851; phone: 216.241.7333 ext. 3008; fax: 216.241.0105; E-mail: jharding@thomasamc.com.

Approval of Accreditation

American Society of Plumbing Engineers (ASPE)

ANSI’s Executive Standards Council has approved the American Society of Plumbing Engineers (ASPE), an ANSI Organizational Member, as an ANSI Accredited Standards Developer (ASD) under its proposed operating procedures for documenting consensus on proposed American National Standards, effective May 18, 2012. For additional information, please contact: Ms. Gretchen Pienta, Editorial Director, American Society of Plumbing Engineers, 2980 S. River Road, Des Plaines, IL 60018; phone: 847.296.0002; fax: 847.296.2963; E-mail: gpienta@aspe.org.

ANSI Accreditation Program for Third Party Product Certification Agencies

Initial Accreditation

National Precast Concrete Association (NPCA)

Comment Deadline: June 25, 2012

Mr. Ty Gable , President
National Precast Concrete Association (NPCA)
1320 City Center Dr, Suite 200,
Carmel, IN 46032
E-mail: tgable@precast.org

On May 18, 2012, the ANSI Accreditation Committee (ACC) voted to approve the Initial Accreditation for National Precast Concrete Association (NPCA) for the following scope:

SCOPE:

NPCA Plant Certification Program

Please send your comments by June 25, 2012 to Reinaldo Balbino Figueiredo, Senior Program Director, Product Certifier Accreditation, American National Standards Institute, 1899 L Street, NW, 11th Floor, Washington, DC 20036, Fax: 202-293 9287 or e-mail: rfigueir@ansi.org, or Nikki Jackson, Senior Program Manager, Product Certifier Accreditation, American National Standards Institute, 1899 L Street, NW, 11th Floor, Washington, DC 20036 Fax: 202-293 9287 or e-mail: njackson@ansi.org.
ANSI-ASQ National Accreditation Board (ANAB)

Responsible Recycling
Notice of Accreditation
Certification Body
TÜV SÜD America, Inc.

The ANSI-ASQ National Accreditation Board is pleased to announce that the following certification body has earned ANAB accreditation for Responsible Recycling:
TÜV SÜD America, Inc.
10 Centennial Drive
Peabody, MA 01960
www.tuvamerica.com
E-mail: info@tuvam.com

International Organization for Standardization (ISO)

Call for International (ISO) Secretariat
ISO/TC 130 – Graphic technology

ANSI has been informed by DIN (Germany), the ISO delegated secretariat, that they wish to relinquish the role of the secretariat. ISO/TC 130 operates under the following scope:

Standardization of terminology, test methods and specifications in the field of printing and graphic technology from the original provided to finished products.

The scope includes in particular:
- composition;
- reproduction;
- printing processes;
- finishing (for example, binding);
- suitability of inks, substrates and other materials used in graphic technology.

Information concerning the United States retaining the role of international secretariat may be obtained by contacting ANSI at isot@ansi.org.
Information Concerning

ANSI Accreditation Program for Third Party Product Certification Agencies

Voluntary Withdrawal from ANSI Accreditation

Bay Area Compliance Laboratories Corporation

Comment Deadline: June 4, 2012

Bay Area Compliance Laboratories Corporation
1274 Anvilwood Avenue
Sunnyvale, CA 94089

Bay Area Compliance Laboratories Corp. (BACL), an ANSI-Accredited Certification Body, has formally submitted notification of its voluntary withdrawal from ANSI accreditation for the following scopes, effective on May 1, 2012:

SCOPE(S)

FCC (A1) Unlicensed Radio Frequency Devices
FCC (A2) Unlicensed Radio Frequency Devices
FCC (A3) Unlicensed Radio Frequency Devices
FCC (A4) Unlicensed Radio Frequency Devices
FCC (B1) Licensed Radio Frequency Devices
FCC (B2) Licensed Radio Frequency Devices
FCC (B3) Licensed Radio Frequency Devices
FCC (B4) Licensed Radio Frequency Devices
FCC (C) Telephone Terminal Equipment

ANSI Seeks Comments on Proposed New ISO Standard on Consumer Contact Centers

The International Organization for Standardization (ISO) Committee on Consumer Policy (COPOLCO) has submitted a proposal to ISO for a new ISO standard on guidelines for consumer contact centers. As the U.S. member body to ISO, the American National Standards Institute (ANSI) invites all interested stakeholders to submit comments on the proposal by Friday, June 15, 2012.

The proposed new work item, Guidelines for customer contact centres, would provide guidance for business process service centers, including front-end voice, multimedia, and back-office service providers, and including all customer contact centers (call centers), whether an in-house (captive) center or a third-party operator (outsourcer).

The intent is to address issues identified in an ISO/COPOLCO/DEVCO survey in 2009-10 on customer contact centers. These issues include problems customers reported with accessing and/or receiving satisfactory help and common frustrations with customer call centers.

All comments on the proposal should be sent to Steven P. Cornish, ANSI senior director for international policy (isot@ansi.org). Feedback received by the June 15 deadline will be reviewed and compiled for the recommended ANSI position and comments, which will then be presented to the ANSI ISO Council (AIC) for formal approval.

Read the COPOLCO proposal.

ANSI has published an explanatory information document outlining the process used to develop U.S. positions on issues and activities under consideration by ISO and IEC. Click here to download the document.
ANSI Seeks Comments on Proposed New ISO Standard on Consumer Warranties

The International Organization for Standardization (ISO) Committee on Consumer Policy (COPOLCO) has submitted a proposal to ISO for a new ISO standard on guidelines for consumer warranties. As the U.S. member body to ISO, the American National Standards Institute (ANSI) invites all interested stakeholders to submit comments on the proposal by Friday, June 15, 2012.

The proposed new work item, Guidelines on consumer warranties, would provide producers or sellers of goods and services with guidance on the requirements for effective warranties when they are providing them with their goods and services. If the work item is approved, the work would be carried out by a project committee.

The intent is to address problems with warranties in relation to goods or services sold, either within one jurisdiction or across a number of different jurisdictions. Problems with goods that are defective or do not conform to the description of the contract are among the main reasons for consumer complaints, and also cause large financial and other detriment, both for individual consumers and for the economy as a whole.

All comments on the proposal should be sent to Steven P. Cornish, ANSI senior director for international policy (isot@ansi.org). Feedback received by the June 15 deadline will be reviewed and compiled for the recommended ANSI position and comments, which will then be presented to the ANSI ISO Council (AIC) for formal approval.

Read the COPOLCO proposal.

ANSI has published an explanatory information document outlining the process used to develop U.S. positions on issues and activities under consideration by ISO and IEC. Click here to download the document.
FOREWORD

This Addendum covers two changes to Chapter 6 of the Standard incorporating open circuit cooling tower flow turndown and fan control for multi-fan heat rejection installations as follows:

- The addition of a flow turndown requirement to the Standard will require the use of cooling towers capable of handling modulation of condenser water flow as a means to save energy. Manufacturers would need to design and supply spray water distribution systems, either gravity flow or pressurized, that will function properly at a reduced flow over the tower. The 50% flow turndown ratio was established to minimize the potential for scaling of the heat transfer surface in the tower, which can reduce the capacity of the tower and consequently lead to higher energy use. The 50% turndown ratio also corresponds with the latest proposal for a similar flow turndown requirement in California Title 24.

- As virtually all heat rejection equipment utilize VSDs on the 7.5 HP fans and above, a requirement to operate the maximum number of fans in a multi-fan installation to minimize energy for a given duty has been added as 6.5.5.2.2. All fans should be operated in tandem at the same fan speed as this control sequence for multi-fan installations is more energy efficient than on/off or sequenced fan operation. A note that the minimum fan speed must comply with the minimum allowable speed of the fan drive system per the heat rejection device manufacturer’s recommendations was also added.

Two other changes were also made:

- 6.5.5.1 was revised to include dry coolers as an example since they are common devices used for heat rejection and to clarify the two types of cooling towers referenced in this section (open-circuit and closed-circuit).

- 6.5.5.2.1 was revised to eliminate exception d. as most heat transfer devices utilize VSDs due to the many benefits and declining costs of VSDs. This exception would also conflict with the fan speed requirement proposed in 6.5.5.2.2 for multi-cell heat rejection devices.

Note that this change to the Standard is supported by the Standards Subcommittee of TC08.06, the ASHRAE technical committee for Cooling Tower and Evaporative Condensers.

Note: In this addendum, changes to the current standard are indicated in the text by underlining (for additions) and strikethrough (for deletions) unless the instructions specifically mention some other means of indicating the changes. Only these changes are open for review and comment at this time. Additional material is provided for context only and is not open for comment except as it relates to the proposed substantive changes.
Addendum af to 90.1-2010

Revise the Standard as follows (I-P units)

6.5.5 Heat Rejection Equipment

6.5.5.1 General. Section 6.5.5 applies to heat rejection equipment used in comfort cooling systems such as air-cooled condensers, dry coolers, open-circuit cooling towers, closed-circuit cooling towers, and evaporative condensers.

Exception: Heat rejection devices whose energy usage is included in the equipment efficiency ratings listed in Tables 6.8.1A through 6.8.1D.

6.5.5.2 Fan Speed Control.

6.5.5.2.1 Each fan powered by a motor of 7.5 hp or larger shall have the capability to operate the fan at two-thirds of full speed or less and shall have controls that automatically change the fan speed to control the leaving fluid temperature or condensing temperature/pressure of the heat rejection device.

Exceptions:
  a. Condenser fans serving multiple refrigerant circuits.
  b. Condenser fans serving flooded condensers.
  c. Installations located in climate zones 1 and 2.
  d. Up to one-third of the fans on a condenser or tower with multiple fans, where the lead fans comply with the speed control requirement.

6.5.5.2.2 Multiple cell heat rejection equipment with variable speed fan drives shall:

  a. Operate the maximum number of fans allowed that comply with the manufacturer’s requirements for all system components and
  b. Control all fans to the same fan speed required for the instantaneous cooling duty as opposed to staged (on/off) operation. Minimum fan speed shall comply with the minimum allowable speed of the fan drive system per the manufacturer’s recommendations.

6.5.5.3 Limitation on Centrifugal Fan Open-Circuit Cooling Towers. Centrifugal fan open-circuit cooling towers with a combined rated capacity of 1100 gpm or greater at 95°F condenser water return, 85°F condenser water supply, and 75°F outdoor air wet-bulb temperature shall meet the energy efficiency requirement for axial fan open-circuit cooling towers listed in Table 6.8.1G.

Exception: Centrifugal open-circuit cooling towers that are ducted (inlet or discharge) or require external sound attenuation.

6.5.5.4 Tower Flow Turndown. Open circuit cooling towers used on water cooled chiller systems that are configured with multiple or variable speed condenser water pumps shall be designed so that all open circuit cooling tower cells can be run in parallel with the larger of:

  A. The flow that is produced by the smallest pump at its minimum expected flow rate, or
  B. 50 percent of the design flow for the cell.
Revise the Standard as follows (S-I units)

6.5.5 Heat Rejection Equipment

6.5.5.1 General. Section 6.5.5 applies to heat rejection equipment used in comfort cooling systems such as air-cooled condensers, dry coolers, open-circuit cooling towers, closed-circuit cooling towers, and evaporative condensers.

Exception: Heat rejection devices whose energy usage is included in the equipment efficiency ratings listed in Tables 6.8.1A through 6.8.1D.

6.5.5.2 Fan Speed Control.

6.5.5.2.1 Each fan powered by a motor of 5.6 kW or larger shall have the capability to operate at two-thirds of full speed or less and shall have controls that automatically change the fan speed to control the leaving fluid temperature or condensing temperature/pressure of the heat rejection device.

Exceptions:
- Condenser fans serving multiple refrigerant circuits.
- Condenser fans serving flooded condensers.
- Installations located in climate zones 1 and 2.
- Up to one-third of the fans on a condenser or tower with multiple fans, where the lead fans comply with the speed control requirement.

6.5.5.2.2 Multiple cell heat rejection equipment with variable speed fan drives shall:

a. Operate the maximum number of fans allowed that comply with the manufacturer’s requirements for all system components and
b. Control all fans to the same fan speed required for the instantaneous cooling duty as opposed to staged (on/off) operation. Minimum fan speed shall comply with the minimum allowable speed of the fan drive system per the manufacturer’s recommendations.

6.5.5.3 Limitation on Centrifugal Fan Open-Circuit Cooling Towers. Centrifugal fan open-circuit cooling towers with a combined rated capacity of 69 L/s or greater at 35°C condenser water return, 29°C condenser water supply, and 24°C outdoor air wet-bulb temperature shall meet the energy efficiency requirement for axial fan open-circuit cooling towers listed in Table 6.8.1G.

Exception: Centrifugal open-circuit cooling towers that are ducted (inlet or discharge) or require external sound attenuation.

6.5.5.4 Tower Flow Turndown. Open circuit cooling towers used on water cooled chiller systems that are configured with multiple condenser water pumps shall be designed so that all open circuit cooling tower cells can be run in parallel with the larger of:

A. The flow that is produced by the smallest pump, or
B. 50 percent of the design flow for the cell.
8.4 Analytical descriptions

8.4.1 pH, TSS, BOD₅, and CBOD₅

The pH, TSS, and BOD₅ of the collected influent and the pH, TSS and CBOD₅ of the collected effluent 24-h composite samples shall be determined with the appropriate methods in Standard Methods. Influent and effluent pH samples shall be collected as grab samples.

Reason: This addresses the issue paper 2011-5 as approved at 2011 JC meeting.

9 Final report

A final report shall be prepared that presents the following:

— all data collected in accordance with the testing and evaluations specified within this Standard;

— calculation of the pounds BOD₅ loaded during the test and the pounds removed;

— any adjustments made to the alkalinity of the influent wastewater;

— copy of the current edition of the Owner’s Manual; and

— process description and detailed dimensioned drawings of the tested system.

A supplemental report shall be prepared for any system(s) approved under the performance classification in 1.4, including process description(s) and dimensioned drawing(s).

Reason: This addresses a comment received on 40i20r1 regarding reporting of adjustments for alkalinity.
6 Disinfection and oxidation chemicals

6.3.3.1 Manufacturer’s Use Instructions

Because aged solutions of hypochlorite may contain elevated levels of perchlorate and chlorate, Certification Listings and the manufacturer’s use instructions, or documentation supplied with the product, shall reference the recommended handling and storage practices contained in AWWA B300 – Hypochlorites.

Annex D
(normative)

Normative drinking water criteria

Table D1 – U.S. Environmental Protection Agency and Health Canada NSF/ANSI 60 drinking water criteria

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Reason: Revised per DWA Task Group on Chlorate recommendation with the following rationale:

In accordance with ASTM procedures and those routinely used when deriving SPACs through Annex A of NSF/ANSI 60, the unrounded Health Canada MAC for chlorate of 1.12 mg/L is most appropriate for use in the calculation and rounding applied after calculating the SPAC. For four sources as utilized in the prior chlorate calculation and based on the unrounded TAC, the SPAC is:

\[
SPAC = \frac{1.12 \text{ mg/L}}{4} = 0.28 \text{ mg/L} = 0.3 \text{ mg/L (rounded)}
\]

Please see attached reference document on chlorate TAC and SPAC review for more information.
BSR/UL 698A Proposals for the Standard for Industrial Control Panels Relating to Hazardous (Classified) Locations

1. Revisions to the Scope and Applicable Requirements of UL 698A to Include AEx Class I, Zones 0 and 1, and AEx Zones 20 and 21 References

1.1 These requirements cover industrial control panels intended for general industrial use and installation in unclassified locations with intrinsically safe circuit extensions into the following Class I, Class II, and Class III, Division 1 hazardous (classified) locations in accordance with the National Electrical Code (NEC), NFPA 70:

a) Class I, Division 1;

b) Class I, Zone 0 and Zone 1;

c) Class II, Division 1;

d) Class III, Division 1; and

e) Zone 20 and Zone 21.

6.1 Barriers shall comply with the following requirements based on the intended area: in the Standard for Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations, UL 913.

a) For Division 1 hazardous (classified) locations in accordance with Article 504 of the NEC: the Standard for Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations, UL 913.

b) For Zone 0 and Zone 1 hazardous (classified) locations in accordance with Article 505 of the NEC: the Standard for Explosive Atmospheres - Part 11: Equipment Protection by Intrinsic Safety "i", UL 60079-11.

c) For Zone 20 and Zone 21 hazardous (classified) locations in accordance with Article 506 of the NEC: the Standard for Electrical Apparatus for Use in Zone 20, Zone 21 and Zone 22 Hazardous (Classified) Locations - Protection by Intrinsic Safety "id", ISA-61241-11 (12.10.04)-2006.

7.1 Intrinsically safe equipment, located in a Division 1, Zone 0, Zone 1, Zone 20 or Zone 21 area, that is intended to be connected to a barrier in the panel, shall be limited to simple apparatus.

Exception: Connection to intrinsically safe equipment, other than simple apparatus, is not prohibited when the connection is evaluated to comply with the following requirements based on the intended area: Standard for Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations, UL 913.

a) For Division 1 hazardous (classified) locations in accordance with Article 504 of the NEC: the Standard for Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations, UL 913.

b) For Zone 0 and Zone 1 hazardous (classified) locations in accordance with Article 505 of the NEC: the Standard for Explosive Atmospheres - Part 11: Equipment Protection by Intrinsic Safety "i", UL 60079-11.

c) For Zone 20 and Zone 21 hazardous (classified) locations in accordance with Article 506 of the NEC: the Standard for Electrical Apparatus for Use in Zone 20, Zone 21 and Zone 22 Hazardous (Classified) Locations - Protection by Intrinsic Safety "id", ISA-61241-11 (12.10.04)-2006.
7.3 For simple apparatus other than switches, the maximum power \( P_o \) delivered from the barrier to the simple apparatus shall not exceed 1.3 W for temperature considerations. The maximum power shall be determined by either a marked value on the barrier or by the following calculation:

\[
P_o = \left( V_{oc} \cdot I_{sc} \right) / 4
\]

in which \( V_{oc} \) and \( I_{sc} \) are per the marked values on the barrier.

Exception: The maximum power \( P_o \) shall not exceed 1.3 W unless the apparatus is evaluated to comply with the following requirements based on the intended areas: Standard for Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations, UL 913.

a) For Division 1 hazardous (classified) locations in accordance with Article 504 of the NEC: the Standard for Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations, UL 913.

b) For Zone 0 and Zone 1 hazardous (classified) locations in accordance with the Article 505 of the NEC: the Standard for Explosive Atmospheres - Part 11: Equipment Protection by Intrinsic Safety "i", UL 60079-11.

c) For Zone 20 and Zone 21 hazardous (classified) locations in accordance with Article 506 of the NEC: the Standard for Electrical Apparatus for Use in Zone 20, Zone 21 and Zone 22 Hazardous (Classified) Locations - Protection by Intrinsic Safety "iD", ISA-61241-11 (12.10.04)-2006.

\(^a\) Based on a 40°C (104°F) or higher marked ambient. \(^b\) Division 1 area applications only.
9.3.1 Partitions shall be made of aluminum, steel, or nonmetallic material and shall be mechanically secured. Where partitions are made of aluminum or steel, they shall be a minimum of 2 mm (0.0787 inch) thick. Where partitions are nonmetallic, they shall be 0.9 mm (0.0354 inch) thick or shall comply with Section 11, Mechanical Tests.

11.1 Nonmetallic partitions less than 0.9 mm (0.0354 inch) thick are to be subjected to a force of 30 Newtons (6.75 lbs-force), applied by a 6 mm (0.25 inch) diameter rigid test rod. The force is to be applied at the center of the partition for 10 seconds. There shall be no permanent deformation of the partition that defeats its purpose.

13.2 The panel shall be marked as follows based on the intended area: "Provides intrinsically safe circuit extensions for use in Class ___, Groups ___, Hazardous (Classified) Locations when connected per Panel Control Drawing No. ____.”

a) For Division 1 hazardous (classified) locations in accordance with Article 504 of the NEC, "Provides intrinsically safe circuit extensions for use in Class ___, Groups ___, Hazardous (Classified) Locations when connected per Panel Control Drawing No. ____.”

b) For Zone 0 and Zone 1 hazardous (classified) locations in accordance with Article 505 of the NEC, "Provides intrinsically safe circuit extensions for use in Class I, Zone ___, Groups ___, Hazardous (Classified) Locations when connected per Panel Control Drawing No. ____.”

c) For Zone 20 and Zone 21 hazardous (classified) locations in accordance with Article 506 of the NEC: the Standard for Electrical Apparatus for Use in Zone 20, Zone 21 and Zone 22 Hazardous (Classified) Locations - Protection by Intrinsic Safety "iD", ISA-61241-11 (12.10.04)-2006.

15.1 Each panel shall be provided with a panel control drawing containing:

a) Instructions for making connections to non-intrinsically safe field wiring terminals;

b) Instructions for making connections to intrinsically safe field wiring terminals;

c) The following statement based on the intended area: “Install in accordance with Article 504 of the National Electrical Code”;

1) For Division 1 hazardous (classified) locations in accordance with Article 504 of the NEC: “Install in accordance with Article 504 of the National Electrical Code”;

2) For Zone 0 and Zone 1 hazardous (classified) locations in accordance with Article 505 of the NEC: “Install in accordance with Article 505 of the National Electrical Code”;

3) For Zone 20 and Zone 21 hazardous (classified) locations in accordance with Article 506 of the NEC: “Install in accordance with Article 506 of the National Electrical Code”;

d) Maximum length of cable to be connected to the barrier. This shall be the length specified by the barrier manufacturer or calculated from the following formulas:

\[
\text{Length (ft)} = \frac{C_a}{60 \text{ pF}}
\]

and

\[
\text{Length (ft)} = \frac{L_a}{0.2 \text{ mH}}
\]

where \( C_a \) and \( L_a \) are the capacitance and the inductance parameters specified by the barrier manufacturer. The specified maximum length shall be the lesser of the two values calculated;
e) Identification of the intrinsically safe equipment intended to be connected to the barrier; and

f) Identification of the hazardous area as follows: by Class and Group in which the intrinsically safe equipment is to be installed.

1) For Division 1 hazardous (classified) locations in accordance with Article 504 of the NEC: by Class and Group in which the intrinsically safe equipment is to be installed.

2) For Zone 0 and Zone 1 hazardous (classified) locations in accordance with Article 505 of the NEC: by Class, Zone and Group in which the intrinsically safe equipment is to be installed.

3) For Zone 20 and Zone 21 hazardous (classified) locations in accordance with Article 506 of the NEC: by Zone in which the intrinsically safe equipment is to be installed.

15.2 For a typical example of a Division 1 panel control drawing, refer to Figure 15.1.

NOTE 1: For a typical example of a Zone 0 or Zone 1 panel drawing, the reference to "Art. 504" in the example would be replaced with "Art. 505" and the reference to "Class I, Groups A, B, C and D" would be replaced with "Class I, Zone 0, IIC" or "Class I, Zone 1, IIC" respectively.

NOTE 2: For a typical example of a Zone 20 or Zone 21 panel drawing, the reference to "Art. 504" in the example would be replaced with "Art. 506" and the reference to "Class I, Groups A, B, C and D" would be replaced with "Zone 20 or Zone 21" respectively.

Proposal to Revise Requirements for Bond Strength Delamination and Blistering Test in Paragraph 17.7.2.1

17.7.2.1 Following the bond-strength testing, two of the four test samples are to be placed in an oven for 240 hours (10 days) at an elevated temperature based on the operating temperature rating of the material being investigated, and . The two remaining samples (of the four) are to be placed in a conditioning oven for 1344 hours (56 days) at an elevated temperature based on the operating temperature rating of the material being investigated. The elevated conditioning temperature is determined using the formulas in 17.7.2.2. At the conclusion of the oven conditioning, the bond-strength testing is to be repeated. The samples are to be examined visually, after oven conditioning and there shall be no wrinkling, cracking, blistering, or loosening of any conductor or any delamination of the insulation and bonding sheets. The alternate 1344-hour (56-day) oven conditioning temperature may be used if the laminate manufacturer anticipates that the higher test temperature and increased bond-strength test requirements of the 240-hour (10-day) oven conditioning program would be too severe for the product.

Exception: For film type materials, separate two test samples besides As-received samples are to be placed in an oven for 240 hours (10 days). Also, another separate two samples besides As-received samples are to be placed in a conditioning oven for 1344 hours (56 days). Thus, for film type materials, total 8 samples (4 for As-received, 2 for 10 days, and 2 for 56 days) are needed.
BSR/UL 1004-3, the Standard for Thermally Protected Motors

Proposal

1. Clarification to the Locked Rotor Temperature Test

1.2 This Standard applies to motors that rely upon a device (thermal motor protector) to prevent overheating under at least one operating condition. These motors shall be identified as thermally protected motors.

41A.1.6 A motor for which a protector opens under at least one operating condition shall be identified as thermally protected and shall comply with the requirements of this Standard in each condition that results in a protector opening. For each condition that does not result in the protector opening, the tests in the Standard for Impedance Protected Motors, UL 1004-2, are to be performed when the measured constant temperature at the condition(s) where the protector does not open exceeds the average after the first hour temperature in Table 41A.1 for the Class of motor insulation.
