This section solicits public comments on proposed draft new American National Standards, including the national adoption of ISO and IEC standards as American National Standards, and on proposals to revise, reaffirm or withdraw approval of existing American National Standards. A draft standard is listed in this section under the ANSI-accredited standards developer (ASD) that sponsors it and from whom a copy may be obtained. Comments in connection with a draft American National Standard must be submitted in writing to the ASD no later than the last day of the comment period specified herein. Such comments shall be specific to the section(s) of the standard under review and include sufficient detail so as to enable the reader to understand the commenter’s position, concerns and suggested alternative language, if appropriate. Please note that the ANSI Executive Standards Council (ExSC) has determined that an ASD has the right to require that interested parties submit public review comments electronically, in accordance with the developer’s procedures.

Ordering Instructions for “Call-for-Comment” Listings
1. Order from the organization indicated for the specific proposal.
2. Use the full identification in your order, including the BSR prefix; for example, Electric Fuses BSR/SAE J554.
3. Include remittance with all orders.
4. BSR proposals will not be available after the deadline of call for comment.

Comments should be addressed to the organization indicated, with a copy to the Board of Standards Review, American National Standards Institute, 25 West 43rd Street, New York, NY 10036. Fax: 212-840-2298; e-mail: psa@ansi.org

* Standard for consumer products
Comment Deadline: April 6, 2014

LEO (Leonardo Academy, Inc.)

**New Standard**

BSR/LEO 4000-201x, National Sustainable Agriculture Standard (new standard)

Establishes a comprehensive framework and common set of environmental, social, and economic metrics by which to determine whether an agricultural crop has been produced and handled in a sustainable manner, from soil preparation and seed planting through production, harvest, post-harvest handling, and distribution for sale. In the future, this standard language will be expanded to include animal production.

Send comments (with copy to psa@ansi.org) to: agstandard@leonardoacademy.org

UL (Underwriters Laboratories, Inc.)

**Revision**

BSR/UL 2227-201x, Standard for Safety for Overfilling Prevention Devices (revision of ANSI/UL 2227-2009)

Revisions to the test container requirements in the Operation Test.

Click here to view these changes in full

Comment Deadline: April 21, 2014

AAMI (Association for the Advancement of Medical Instrumentation)

**New National Adoption**

BSR/AAMI/ISO 13485-201x, Medical devices - Quality management systems - Requirements for regulatory purposes (identical national adoption and revision of ANSI/AAMI/ISO 13485-2003 (R2013))

Specifies requirements for an organization that needs to demonstrate that its quality management system has the ability to manage the life cycle of medical devices and associated activities consistently to meet customer and appropriate regulatory requirements.

Single copy price: $25.00

Order from: AAMI

Send comments (with copy to psa@ansi.org) to: Joe Lewelling, (703) 253-8281, JLewelling@aami.org

API (American Petroleum Institute)

**Reaffirmation**

BSR/API 689/ISO 14224-2007 (R201x), Collection and Exchange of Reliability and Maintenance Data for Equipment (reaffirmation of ANSI/API 689/ISO 14224-2007)

This International Standard provides a comprehensive basis for the collection of reliability and maintenance (RM) data in a standard format for equipment in all facilities and operations within the petroleum, natural gas and petrochemical industries during the operational life cycle of equipment. It describes data-collection principles and associated terms and definitions that constitute a 'reliability language' that can be useful for communicating operational experience. The failure modes defined in the normative part of this International Standard can be used as a 'reliability thesaurus' for various quantitative as well as qualitative applications.

Single copy price: $212.00

ASA (ASC S1) (Acoustical Society of America)

New National Adoption
BSR/ASA S1.4-201x/Part 1 / IEC 61672-1:2013, Electroacoustics - Sound level meters - Part 1: Specifications (identical national adoption of IEC 61672-1:2013)

This part gives electroacoustical performance specifications for three kinds of sound-measuring instruments: a time-weighting sound-level meter that measures exponential-time-weighted, frequency-weighted sound levels; an integrating-averaging sound-level meter that measures time-averaged, frequency-weighted sound levels; and an integrating sound-level meter that measures frequency-weighted sound exposure levels. An informational annex is proposed to be added to this part.

Single copy price: $303.00

ASA (ASC S2) (Acoustical Society of America)

Reaffirmation
BSR/ASA S2.28-2009 (R201x), Guide for the Measurement and Evaluation of Broadband Vibration of Surface Ship Auxiliary Rotating Machinery (reaffirmation of ANSI/ASA S2.28-2009)

This document provides guidance for assessing the severity of vibrations measured on bearing housings of shipboard machinery so as to ensure reliable mechanical operation. The criteria apply to the vibration of all non-reciprocating machinery on board surface ships, except for main propulsion machinery. They apply to broadband vibration measurements taken on the bearing housings, of machines under steady-state operating conditions with normal operating conditions of speed and load.

Single copy price: $110.00
Obtain an electronic copy from: asastds@aip.org
Order from: Susan Blaeser, (631) 390-0215, sblaeser@aip.org; asastds@aip.org
Send comments (with copy to psa@ansi.org) to: Same

ASA (ASC S3) (Acoustical Society of America)

New National Adoption
BSR/ASA S3.5-201x/Part 5/IEC 60318-5:2006 (MOD), Electroacoustics - Simulators of Human Head and Ear - Part 5: 2 cm³ coupler for the measurement of hearing aids and earphones coupled to the ear by means of ear inserts (national adoption with modifications of IEC 60318-5 Ed.1.0 b: 2006)

This part describes an acoustic coupler for loading an earphone or hearing aid with a specified acoustic impedance when determining its physical performance characteristics, in the frequency range 125 Hz to 8 kHz. It is suitable for air-conduction hearing aids and earphones, coupled to the ear by means of ear inserts, e.g., ear moulds or similar devices.

Single copy price: $73.00
Obtain an electronic copy from: asastds@aip.org
Order from: Susan Blaeser, (631) 390-0215, sblaeser@aip.org; asastds@aip.org

ASA (ASC S3) (Acoustical Society of America)

Reaffirmation
BSR/ASA S3.45-2009 (R201x), Procedures for Testing Basic Vestibular Function (reaffirmation of ANSI/ASA S3.45-2009)

Defines test procedures, measurements, data analysis, and data reporting requirements for performing and reporting a battery of six different tests for the evaluation of human vestibular function ("Basic Vestibular Function Test Battery"). Stimuli are presented to evoke eye movement by a subject whose response is determined either by measurement of electrical signals generated by the eye movements or by image processing methods applied to video eye movements. Test interpretation is not included.

Single copy price: $120.00
Obtain an electronic copy from: asastds@aip.org
Order from: Susan Blaeser, (631) 390-0215, sblaeser@aip.org; asastds@aip.org
Send comments (with copy to psa@ansi.org) to: Same

ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.)

Addenda

This addendum creates a BACnet-visible mechanism for viewing and/or configuring a device's network settings so that there is a way for BACnet client devices to easily and consistently access and manipulate this information. It also makes changes to Annex J for the Network Port Object.

Single copy price: $35.00
Obtain an electronic copy from: http://www.ashrae.org/standards-research--technology/public-review-drafts
Order from: standards.section@ashrae.org
Send comments (with copy to psa@ansi.org) to: http://www.ashrae.org/standards-research--technology/public-review-drafts

ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.)

Addenda

This addendum describes a mechanism by which IPv6 can be added to BACnet and remain backwards compatible with existing devices and adds an additional method for VMAC determination.

Single copy price: $35.00
Obtain an electronic copy from: http://www.ashrae.org/standards-research--technology/public-review-drafts
Order from: standards.section@ashrae.org
Send comments (with copy to psa@ansi.org) to: http://www.ashrae.org/standards-research--technology/public-review-drafts
Addenda
This addendum adds Extended Length MS/TP Frames. Since BACnet now supports higher baud rates for MS/TP, increasing the frame sizes will allow better throughput as well as opening up future possibilities that the ability to carry full ethernet-sized frames will enable. The addendum also adds a procedure for determining Maximum Conveyable APDU.
Single copy price: $35.00
Obtain an electronic copy from: http://www.ashrae.org/standards-research--technology/public-review-drafts
Order from: standards.section@ashrae.org
Send comments (with copy to psa@ansi.org) to: http://www.ashrae.org/standards-research--technology/public-review-drafts

Addenda
This addendum adds a new object type Timer to allow timer functionality to be network visible. The addendum also corrects Expiry_Time property name to Expiration_Time in the Access Credential Object.
Single copy price: $35.00
Obtain an electronic copy from: http://www.ashrae.org/standards-research--technology/public-review-drafts
Order from: standards.section@ashrae.org
Send comments (with copy to psa@ansi.org) to: http://www.ashrae.org/standards-research--technology/public-review-drafts

Addenda
The purpose of this addendum is to add Binary Lighting Output Object Type and set Non-zero Values to Change_Of_State_Count and Elapsed_Active_Time.
Single copy price: $35.00

Revision
Volume B30.10 includes provisions that apply to the fabrication, attachment, use, inspection, and maintenance of hooks shown in Chapters 10-1 and 10-2 used for load handling purposes, in conjunction with equipment described in other volumes of the B30 Standard. Hooks supporting a load in the base (bowl/saddle or pinhole) of the hook are covered in Chapter 10-1. Hooks that may be loaded in other than the base (bowl/saddle or pinhole) are covered in Chapter 10-2.

ATIS (Alliance for Telecommunications Industry Solutions)

New Standard
BSR ATIS 1000013.v2-201x, Lawfully Authorized Electronic Surveillance (LAES) for Internet Access and Services, Version 2 (new standard)
Internet Access and Services can be obtained by establishing a subscription-based arrangement. This standard provides capabilities to lawfully intercept communications of subscription-based Internet Access and Services arrangements.
Single copy price: $220.00
Obtain an electronic copy from: kconn@atis.org
Order from: Kerrianne Conn, (202) 434-8841, kconn@atis.org; jpmard@atis.org

ATIS (Alliance for Telecommunications Industry Solutions)

New Standard
BSR ATIS 1000678.v3.201x, Lawfully Authorized Electronic Surveillance (LAES) for Voice over Packet Technologies in Wireline Telecommunications Networks, Version 3 (new standard)
This document provides the mechanisms to perform lawfully authorized electronic surveillance of VoP subject to the appropriate legal and regulatory environment. It is not the intent of this document to imply or impact any pending Communications Assistance for Law Enforcement Act (CALEA) regulatory decisions related to VoP.
Single copy price: $535.00
Obtain an electronic copy from: kconn@atis.org
Order from: Kerrianne Conn, (202) 434-8841, kconn@atis.org; jpmard@atis.org

ATIS (Alliance for Telecommunications Industry Solutions)

Withdrawal
ANSI ATIS 1000013-2007, Lawfully Authorized Electronic Surveillance (LAES) for Internet Access and Services (withdrawal of ANSI ATIS 1000013-2007)
This standard supports the ability of Internet access providers and Internet service providers to assist law enforcement agencies in intercepting Internet broadband data and defines the communication-identifying information and content to be intercepted and reported, as well as the delivery format.
Additionally, the standard provides for a “safe harbor” as specified in Section 107 of the Communications Assistance for Law Enforcement Act (CALEA).
Single copy price: $250.00
Obtain an electronic copy from: kconn@atis.org

TIA (Telecommunications Industry Association)

Revision

BSR/TIA 571-C-201x, Telecommunications - Telephone Terminal Equipment - Electrical, Thermal and Mechanical Environmental Performance Requirements (revision and redesignation of ANSI/TIA 571-B-2007)

TIA-571-B is up for 5-year review. It has been determined that updating and revisions are required. Some items that need consideration are:

- Scope – Expansion of the scope to include communications equipment typically found at the premises in today’s broadband environment;
- Vibration tests – It is now generally recognized that random vibration is more representative of real-world conditions and should replace the current sinusoidal vibration tests;
- Surge tests – Consideration should be given to TIA 1194, Surge Resistibility of Smart Grid Equipment Connected to either DC or 120/240 V Single Phase AC and Metallic Communication Lines, as well as a complete review of this section to make sure the standard reflects the latest technologies, installations and adequately addresses the real surge environment for various types of equipment; and
- Different testing paths should be considered for different uses and installations of equipment. For example, consumer/enterprise, portable/installed equipment, etc.

Single copy price: $103.00

ASME (American Society of Mechanical Engineers)

Revision

BSR/ASME HST-2-201x, Performance Standard for Hand Chain Manually Operated Chain Hoists (revision of ANSI/ASME HST-2-2010 (R2010))

(a) This Standard establishes performance requirements for hand chain manually operated chain hoists for vertical lifting service involving material handling of freely suspended (unguided) loads, using welded link type load chain as a lifting medium, with one of the following types of suspension:
(1) hook or clevis;
(2) trolley.

(b) This Standard is applicable to hoists manufactured after the date on which this Standard is issued. Differential pulley and self-locking worm drive type hoists are not covered in this Standard.

(c) This Standard is not applicable to:
(1) damaged or malfunctioning hoists;
(2) hoists that have been misused or abused;
(3) hoists that have been altered without authorization of the manufacturer or a qualified person;
(4) hoists used for lifting or supporting people;
(5) hoists used for the purpose of drawing both the load and the hoist up or down the hoist’s own wire rope; and
(6) hoists used for marine and other applications as required by the Department of Defense (DOD).

30 Day Notice of Withdrawal: ANS 5 to 10 years past approval date

In accordance with clause 4.7.1 Periodic Maintenance of American National Standards of the ANSI Essential Requirements, the following American National Standards have not been reaffirmed or revised within the five-year period following approval as an ANS. Thus, they shall be withdrawn at the close of this 30-day public review notice in Standards Action.

Correction

There was an error in the call for comment section of the February 21, 2014 issue of Standards Action for BSR/NISO Z39.99-201x, ResourceSync Framework Specification. The information for ordering copies and sending comments should have indicated the following:

**Revision**
Standard 41.9 establishes requirements for the performance, design, qualification testing, markings and instructions, inspections, maintenance and storage, and removal from service of self-retracting devices (SRDs) including self-retracting lanyards (SRLs), self-retracting lanyards with integral rescue capability (SRL-Rs), and self-retracting lanyards with leading edge capability (SRL-LEs). This standard also includes requirements for the information and instructions which accompany each package. This standard provides recommended practices for measuring the mass flow rate of volatile refrigerants using calorimeters.

Stakeholders: Consumers, test labs, manufacturers of refrigerant compressors and air conditioning systems, and AHRI and other rating agencies.
Project Need: ANSI/ASHRAE Standard 41.9 is used to measure the refrigerant mass flow rate through refrigerant compressors, condensing units, heat exchanges, and mass flow control devices. ANSI/ASHRAE Standard 41.9 is a primary reference in ANSI/ASHRAE Standard 23.1 and is probably referenced by other MOT standards.
This standard provides recommended practices for measuring the mass flow rate of volatile refrigerants using calorimeters.

BSR/ASSE Z359.4-201X, Safety Requirements for Assisted-Rescue & Self-Rescue Systems, Subsystems & Components (revision of ANSI/ASSE Z359.4-2013)
Stakeholders: Safety, health, and environmental professionals responsible for fall protection and fall arrest.
Project Need: Based upon the consensus of safety, health, and environmental professionals responsible for fall protection and fall arrest.
This standard establishes requirements for the performance, design, qualification testing, markings and instructions, inspections, maintenance and storage, and removal from service of self-retracting devices (SRDs) including self-retracting lanyards (SRLs), self-retracting lanyards with integral rescue capability (SRL-Rs), and self-retracting lanyards with leading edge capability (SRL-LEs). This standard establishes requirements for SRDs intended for use in personal fall arrest or rescue systems for authorized persons within the capacity range of 130 to 310 pounds (59 to 141 kg).
BSR/ASSE Z359.6-201X, Specifications & Design Requirements for Active Fall Protection Systems (revision of ANSI/ASSE Z359.6-2009)

Stakeholders: Safety, health, and environmental professionals responsible for fall protection and fall arrest.

Project Need: Based upon the consensus of safety, health, and environmental professionals responsible for fall protection and fall arrest.

This standard is intended for engineers with expertise in designing fall protection systems. It specifies requirements for the design and performance of complete active fall protection systems, including travel restraint and vertical and horizontal fall arrest systems.

BSR/ASSE Z359.7-201X, Qualification and Verification Testing of Fall Protection Products (revision of ANSI/ASSE Z359.7-2011)

Stakeholders: Safety, health, and environmental professionals responsible for fall protection and fall arrest.

Project Need: Based upon the consensus of safety, health, and environmental professionals responsible for fall protection and fall arrest.

This standard specifies requirements for qualification and verification testing of ANSI/ASSE Z359, Fall Protection Code, products. It includes requirements for third-party testing, witness testing and manufacturer testing of fall protection products to the requirements of the ANSI/ASSE Z359 standards.

Stakeholders: Safety, health, and environmental professionals responsible for fall protection and fall arrest.

Project Need: Based upon the consensus of safety, health, and environmental professionals responsible for fall protection and fall arrest.

This standard establishes requirements for the design, marking, qualification, test methods and removal from service of connectors.

Stakeholders: Safety, health, and environmental professionals responsible for fall protection and fall arrest.

Project Need: Based upon the consensus of safety, health, and environmental professionals responsible for fall protection and fall arrest.

This standard establishes requirements for the performance, design, marking, qualification, instructions, inspection, maintenance and removal from service of energy absorbing lanyards and personal energy absorbers. It is the intention of this standard to require all energy absorbing lanyards and personal energy absorbers to reduce the forces implied on the user to less than 10 Gs (10 times the normal gravitational pull of the Earth). Users must be within the range of 130 to 310 lbs (59 - 140 kg.).

BSR/ASSE Z359.0 201X, Definitions & Nomenclature Used for Fall Protection & Fall Arrest (revision of ANSI/ASSE Z359.0-2012)

Stakeholders: Safety, health, and environmental professionals responsible for fall protection and fall arrest.

Project Need: Based upon the consensus of safety, health, and environmental professionals responsible for fall protection and fall arrest.

This standard establishes the definitions and nomenclature used for the Z359 Fall Protection Code.

BSR ATIS 100063-201x, SIP NNI Routing Solution Framework (new standard)

Stakeholders: Communications industry.

Project Need: To identify a baseline set of features that should be common to all IP-NNI implementations for voice service.

To identify a baseline set of features that should be common to all IP-NNI implementations for voice service.

BSR ATIS 100062-201x, IP Network-to-Network Interface Profile (new standard)

Stakeholders: Communications industry.

Project Need: To identify a baseline set of features that should be common to all IP-NNI implementations for voice service.

To identify a baseline set of features that should be common to all IP-NNI implementations for voice service.

AWS (American Welding Society)

Office: 8669 NW 36 Street
#130
Miami, FL 33166-6672

Contact: Brian McGrath
Fax: (305) 443-5951
E-mail: BMCGRATH@AWS.ORG

Stakeholders: Welded product consumers and fabricators.

Project Need: Provide a set of standard requirements for heat treatment of a specific group of steels.

This standard describes several methods of applying locally controlled heat to weld joints and a limited volume of base metal adjacent to the joints, as opposed to heating the whole weldment in a furnace or oven. This standard is written to apply to the local heating of Creep Strength-Enhanced Steels (ASME designation P-15E and similar steels) by the use of electrical resistance heating pads.

BSR/AWS D10.23/D10.23M-201x, Specification for the Qualification of Personnel for Local Heat Treatment of Welds in Pipe and Tube Components (new standard)

Stakeholders: Welded product consumers and fabricators.

Project Need: Establish a formal accredited curriculum to support industry needs.

Establish a formal, accredited curriculum, as requested by energy owners, contractors and heat treatment service providers, to qualify a fundamental understanding of field heat treatment and performance competency.

BSR A100.12-201x, Specification for Local Heating of Tubing Using Electric Resistance Heating (new standard)

Stakeholders: Welded product consumers and fabricators.

Project Need: Establish a formal accredited curriculum to support industry needs.

Establish a formal, accredited curriculum, as requested by energy owners, contractors and heat treatment service providers, to qualify a fundamental understanding of field heat treatment and performance competency.
BSR/HL7 V2.8.1-201x, Health Level Seven Standard Version 2.8.1 - An Application Protocol for Electronic Data Exchange in Healthcare Environments (revision of ANSI HL7 V2.8-2014)

Stakeholders: Pharmaceutical, healthcare, EHR vendors.

Project Need: Updates to support meaningful use.

The proposed item is an interim release of the Version 2.8 standard that is deemed necessary to support the development of a number of implementation guides to support an upcoming Meaningful Use stage issued by the US Federal Government's Health and Human Services (HHS). The proposed changes are as follows: (1) New order control codes - Updated application acknowledgement message structures; (2) Addition of new fields in OBX; and (3) Updated conformance constructs.

BSR/ISA 77.30.01-201x, Power Plant Control System Dynamic Performance Test Methods and Procedures (new standard)

Stakeholders: Consumers, manufacturers, regulatory bodies.

Project Need: To establish dynamic performance criteria for power plant control systems by specifying a consistent means of evaluating control system performance necessary to comply with contractual specifications and other dynamic performance requirements.

The standard defines test procedures, data collection requirements and data analysis methods for determining and reporting the dynamic performance of control systems for boiler and turbine control systems on generating units with a rated capacity of 25 MW or greater or a boiler steam flow greater than 25 kg/s (200,000 lb/hr). This standard covers aspects of dynamic plant operation including constant load operation, normal load ramping operation, grid regulation operation, and response to frequency upset, load runback, and load rundown operation.

BSR INCITS 538-201x, Information technology - SAS Protocol Layer - 4 (new standard)

Stakeholders: This project is intended to preserve much of the existing Serial Attached SCSI software and hardware.

Project Need: The proposed project involves a compatible evolution of the present SAS Protocol Layer - 3 standard SAS Protocol Layer - 4 is the next generation of the protocol portion of the current Serial Attached SCSI. It follows SPL-3, SPL-2, SPL, and the protocol portions of SAS-2, and SAS-1.1. The following items should be considered for inclusion in SAS Protocol Layer - 4: (a) Support of a more efficient signal encoding and higher data rates proposed for SAS -4; (b) Enhancements to the protocol; (c) Corrections and clarifications; and (d) Other capabilities that may fit within the scope of this project.

Stakeholders: Cooling system owners/operators and water treatment companies who must evaluate the performance of cooling water additives.

Project Need: This standard has been revised to provide additional testing duration guidance and additional technical resources in the bibliography.

Cooling system design and operating characteristics vary widely within individual plants, from site to site, and worldwide. Thus, selection and optimization of water treatment programs must be a site-specific process. In most systems, optimized cooling water chemical treatment is the key to successful long-term operations. The subject of this standard is the establishment of criteria for the pilot-scale evaluation of the performance of cooling water additives under field-specific operating conditions.

NEMA (ASC C78) (National Electrical Manufacturers Association)

Office: 1300 North 17th Street
Suite 1752
Rosslyn, VA 22209

Contact: Ronald Runkles

Fax: (703) 841-3378
E-mail: ron_runkles@nema.org

* BSR C78.79-201x, Electric Lamps - Nomenclature for Envelope Shapes Intended for Use with Electric Lamps (revision and redesignation of ANSI C79.1-2002 (R2007))

Stakeholders: Manufacturers, designers, testing labs, and end users.

Project Need: This project is needed by stakeholders in that it provides for the systematic designation for envelope shapes for all electric lamps.

This standard describes a system of nomenclature that provides designations for envelope shapes used for all electric lamps. The nomenclature system is intended for application with LED lamps and glass bulbs that originate both as parts and as stock.

Stakeholders: Libraries, content providers and publishers, electronic publication aggregators and platform providers, Electronic Resource System (ERM) and Discovery System vendors.

Project Need: Revise current version to expand filter elements and address any comments received since previous version was published.

This Standard defines an automated request and response model for the harvesting of electronic resource usage data utilizing a Web services framework that can replace the user-mediated collection of usage data reports. Designed to work with Project COUNTER reports, the protocol is also extensible to other types of usage reports. The Standard is built on the SOAP (Simple Object Access Protocol) for transferring request and response messages.

BSR/NSF 438-201x, Ingredient Good Manufacturing Practices (new standard)

Stakeholders: Ingredient manufacturers, retailers, consumers, pharmaceutical manufacturers, food processors, dietary supplement manufacturers, ingredient distributors, cosmetic manufacturers, Food & Drug Administration.

Project Need: Certain ingredients are used commonly in pharmaceutical products, foods, dietary supplements and cosmetics. The ingredient manufacturers supporting these highly regulated industries are coming up against different expectations and requirements that they must comply with. The current state of the supply chain for the pharmaceutical, food, dietary supplement and cosmetic industries is creating multiple audits and conflicting and duplicating requirements.

This Standard is intended to define an ingredient auditing approach for finished product manufacturers in accordance with Good Manufacturing Practices (GMPs) for pharmaceutical, foods, dietary supplements and cosmetic products. It will refer to the GMPs applicable to all of the impacted industries. Elements will include an audit checklist, ingredient testing components, and requirements for auditor training and assessment. A critical element of the standard will be a quality management system for ingredient manufacturing.
**Standards Action - March 7, 2014 - Page 22 of 43 Pages**

**OPEI (Outdoor Power Equipment Institute)**

**Office:** 341 South Patrick Street
Alexandria, VA  22314

**Contact:** Greg Knott
**Fax:** (703) 549-7604
**E-mail:** gknott@opei.org

Stakeholders: Manufacturers of outdoor power equipment, suppliers, distributors, governmental agencies, testing entities and consumers.

Project Need: Review and revise ANSI/OPEI B175.2-2012.

This standard establishes manufacturer requirements to reduce the risk of injury associated with use of internal combustion engine-powered handheld and backpack blowers and blower-vacuums.

* BSR/OPEI B175.3-201X, Outdoor Power Equipment - Internal Combustion Engine-Powered Handheld Grass Trimmers and Brushcutters - Safety and Environmental Requirements (revision of ANSI/OPEI B175.3-2013)

Stakeholders: Manufacturers of outdoor power equipment, suppliers, distributors, governmental agencies, testing entities and consumers.

Project Need: Review and revise ANSI/OPEI B175.3-2013.

This standard establishes safety and environmental requirements for internal combustion engine-powered, handheld, grass trimmers and brushcutters.

**TIA (Telecommunications Industry Association)**

**Office:** 1320 North Courthouse Road
Suite 200
Arlington, VA  22201

**Contact:** Marianna Kramarikova
**E-mail:** standards@tiaonline.org

Project Need: Provide updates for an existing standard.

This addendum introduces a high level functional and architectural overview of the security and key management architecture for TIA-102 system configurations. It provides an overview along with the functional and key management architectural models and descriptions.

**BSR/UL 428A-201x, Standard for Electrically Operated Valves for Gasoline and Gasoline/Ethanol Blends with Nominal Ethanol Concentrations Up to 85 Percent (E0 - E85) (new standard)**

Stakeholders: Electrical safety valve industry and users.

Project Need: To develop a new American National Standard.

These requirements cover electrically operated general purpose and safety valves rated 600 volts or less and intended for the control of one of the following fluids: (a) Gasoline formulated in accordance with ASTM D4814; (b) Gasoline/ethanol blends with nominal ethanol concentrations up to 25 percent ethanol (E25); or (c) Gasoline/ethanol blends with nominal ethanol concentrations above 25 percent.

**BSR/UL 428B-201x, Standard for Electrically Operated Valves for Diesel Fuel, Biodiesel Fuel, Diesel/Biodiesel Blends with Nominal Biodiesel Concentrations Up to 20 Percent (B20), Kerosene, and Fuel Oil (new standard)**

Stakeholders: Electrical safety valve industry and users.

Project Need: To develop a new American National Standard.

These requirements cover electrically operated general purpose and safety valves rated 600 volts or less and intended for the control of the following fluids: (a) Diesel fuel and diesel/biodiesel blends with nominal biodiesel concentrations up to 5 percent (B0 - B5); (b) Diesel/biodiesel blends with nominal biodiesel concentrations from 5 percent up to 20 percent (B6 - B20); (c) Biodiesel (B99.9/B100); (d) Kerosene; or (e) Fuel oil (heating oil).

**UL (Underwriters Laboratories, Inc.)**

**Office:** 455 E Trimble Road
San Jose, CA  95131-1230

**Contact:** Linda Phinney
**Fax:** (408) 754-6684
**E-mail:** Linda.L.Phinney@ul.com

**BSR/UL 331A-201X, Standard for Safety for Strainers for Gasoline and Gasoline/Ethanol Blends with Nominal Ethanol Concentrations Up to 85 Percent (E0 - E85) (new standard)**

Stakeholders: Motor fuel industry, manufacturers of strainers.

Project Need: To obtain national recognition of a standard covering strainers for use with gasoline and gasoline/ethanol blends with nominal ethanol concentrations up to 85 percent (E0 - E85).

These requirements cover complete, self-contained strainer or filter assemblies intended for use with gasoline and gasoline/ethanol blends with nominal ethanol concentrations up to 85 percent (E0- E85). Although these devices are designated strainers, they may be either strainers or filters according to the common terminology of the industry.
BSR/UL 331B-201X, Standard for Safety for Strainers for Diesel Fuel, Biodiesel Fuel, Diesel/Biodiesel Blends with Nominal Biodiesel Concentrations up to 20 Percent (B20), Kerosene, and Fuel Oil (new standard)

Stakeholders: Motor fuel industry, manufacturers of strainers.

Project Need: To obtain national recognition of a standard covering strainers for use with diesel fuel, biodiesel fuel, diesel/biodiesel blends with nominal biodiesel concentrations up to 20 percent (B20), kerosene, and fuel oil.

These requirements cover complete, self-contained strainer or filter assemblies intended for use with diesel fuel, biodiesel fuel, diesel/biodiesel blends with nominal biodiesel concentrations up to 20 percent (B20), kerosene, and fuel oil. Although these devices are designated strainers, they may be either strainers or filters according to the common terminology of the industry.
American National Standards Maintained Under Continuous Maintenance

The ANSI Essential Requirements: Due Process Requirements for American National Standards provides two options for the maintenance of American National Standards (ANS): periodic maintenance (see clause 4.7.1) and continuous maintenance (see clause 4.7.2). Continuous maintenance is defined as follows:

The standard shall be maintained by an accredited standards developer. A documented program for periodic publication of revisions shall be established by the standards developer. Processing of these revisions shall be in accordance with these procedures. The published standard shall include a clear statement of the intent to consider requests for change and information on the submittal of such requests. Procedures shall be established for timely, documented consensus action on each request for change and no portion of the standard shall be excluded from the revision process. In the event that no revisions are issued for a period of four years, action to reaffirm or withdraw the standard shall be taken in accordance with the procedures contained in the ANSI Essential Requirements.

The Executive Standards Council (ExSC) has determined that for standards maintained under the Continuous Maintenance option, separate PINS announcements are not required. The following ANSI Accredited Standards Developers have formally registered standards under the Continuous Maintenance option.

- AAMI (Association for the Advancement of Medical Instrumentation)
- AAMVA (American Association of Motor Vehicle Administrators)
- AGA (American Gas Association)
- AGSC (Auto Glass Safety Council)
- ASC X9 (Accredited Standards Committee X9, Incorporated)
- ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.)
- ASME (American Society of Mechanical Engineers)
- ASTM (ASTM International)
- GEIA (Greenguard Environmental Institute)
- HL7 (Health Level Seven)
- MHI (ASC MH10) (Material Handling Industry)
- NAHBRC (NAHB Research Center, Inc.)
- NBBPVI (National Board of Boiler and Pressure Vessel Inspectors)
- NCPDP (National Council for Prescription Drug Programs)
- NISO (National Information Standards Organization)
- NSF (NSF International)
- TIA (Telecommunications Industry Association)
- UL (Underwriters Laboratories, Inc.)

To obtain additional information with regard to these standards, including contact information at the ANSI Accredited Standards Developer, please visit ANSI Online at www.ansi.org/asd, select “Standards Activities,” click on “Public Review and Comment” and “American National Standards Maintained Under Continuous Maintenance.” This information is also available directly at www.ansi.org/publicreview.

Alternatively, you may contact the Procedures & Standards Administration department (PSA) at psa@ansi.org or via fax at 212-840-2298. If you request that information be provided via E-mail, please include your E-mail address; if you request that information be provided via fax, please include your fax number. Thank you.

ISO Draft International Standards

This section lists proposed standards that the International Organization for Standardization (ISO) is considering for approval. The proposals have received substantial support within the technical committees or subcommittees that developed them and are now being circulated to ISO members for comment and vote. Standards Action readers interested in reviewing and commenting on these documents should order copies from ANSI.

Comments

Comments regarding ISO documents should be sent to Karen Hughes, at ANSI's New York offices (isot@ansi.org). The final date for offering comments is listed after each draft.

ISO/IEC JTC 1 Technical Reports

AIRCRAFT AND SPACE VEHICLES (TC 20)

ISO/DIS 9940, Aerospace - Fire resistant hydraulic fluids - 6/6/2014

PERSONAL SAFETY - PROTECTIVE CLOTHING AND EQUIPMENT (TC 94)

ISO/DIS 16900-6, Respiratory protective devices - Methods of test and test equipment - Part 6: Mechanical resistance/strength of components - 6/6/2014

PLASTICS (TC 61)

ISO/DIS 18263-1, Plastics - Mixed polypropylene (PP) and polyethylene (PE) recyclate - Part 1: Designation system and basis for specifications - 6/7/2014
ISO/DIS 18263-2, Plastics - Mixed polypropylene (PP) and polyethylene (PE) recyclate - Part 2: Preparation of test specimens and determination of properties - 6/7/2014

SURFACE CHEMICAL ANALYSIS (TC 201)

ISO/DIS 18337, Surface chemical analysis - Measurement of lateral resolution of confocal fluorescence microscope - 6/6/2014

TRACTORS AND MACHINERY FOR AGRICULTURE AND FORESTRY (TC 23)

ISO/DIS 5681, Equipment for crop protection - Vocabulary - 6/6/2014

ISO/IEC JTC 1, Information Technology

Ordering Instructions

ISO Drafts can be made available by contacting ANSI's Customer Service department. Please e-mail your request for an ISO Draft to Customer Service at sales@ansi.org. When making your request, please provide the date of the Standards Action issue in which the draft document you are requesting appears.
Listed here are new and revised standards recently approved and promulgated by ISO - the International Organization for Standardization – and IEC – the International Electrotechnical Commission. Most are available at the ANSI Electronic Standards Store (ESS) at www.ansi.org. All paper copies are available from Standards resellers (http://webstore.ansi.org/faq.aspx#resellers).

## Newly Published ISO & IEC Standards

### ISO Standards

**DOCUMENT IMAGING APPLICATIONS (TC 171)**  

**FLUID POWER SYSTEMS (TC 131)**  
ISO 19973-4:2014, Pneumatic fluid power - Assessment of component reliability by testing - Part 4: Pressure regulators, $114.00

**GAS CYLINDERS (TC 58)**  
ISO 5145:2014, Cylinder valve outlets for gases and gas mixtures - Selection and dimensioning, $180.00

**IMPLANTS FOR SURGERY (TC 150)**  
ISO 21536/Amd1:2014, Non-active surgical implants - Joint replacement implants - Specific requirements for knee-joint replacement implants - Amendment 1, $22.00

**NUCLEAR ENERGY (TC 85)**  
ISO 28057:2014, Dosimetry with solid thermoluminescence detectors for photon and electron radiations in radiotherapy, $180.00

**OTHER**  

**SHIPS AND MARINE TECHNOLOGY (TC 8)**  
ISO 18422:2014, Ships and marine technology - Inland navigation - vessels - Plate with instructions for rescue, resuscitation and first aid for drowning persons, $77.00

ISO 22090-1:2014, Ships and marine technology - Transmitting heading devices (THDs) - Part 1: Gyro-compasses, $108.00

ISO 22090-2:2014, Ships and marine technology - Transmitting heading devices (THDs) - Part 2: Geomagnetic principles, $99.00

ISO 22090-3:2014, Ships and marine technology - Transmitting heading devices (THDs) - Part 3: GNSS principles, $88.00

**TIMBER STRUCTURES (TC 165)**  
ISO 12122-1:2014, Timber structures - Determination of characteristic values - Part 1: Basic requirements, $156.00

**WATER QUALITY (TC 147)**

NANOTECHNOLOGY STANDARDIZATION FOR ELECTRICAL AND ELECTRONIC PRODUCTS AND SYSTEMS (TC 113)
IEC/TS 62607-4-1 Ed. 1.0 en:2014, Nanomanufacturing - Key control characteristics - Part 4-1: Cathode nanomaterials for lithium ion batteries - Electrochemical characterisation, 2-electrode cell method, $97.00

PROCESS MANAGEMENT FOR AVIONICS (TC 107)
IEC/TS 62647-3 Ed. 1.0 en:2014, Process management for avionics - Aerospace and defence electronic systems containing lead-free solder - Part 3: Performance testing for systems containing lead-free solder and finishes, $278.00
Proposed Foreign Government Regulations

Call for Comment

U.S. manufacturers, exporters, regulatory agencies and standards developing organizations may be interested in proposed foreign technical regulations issued by Member countries of the World Trade Organization (WTO). In accordance with the WTO Agreement on Technical Barriers to Trade (TBT Agreement), Members are required to report proposed technical regulations that may significantly affect trade to the WTO Secretariat in Geneva, Switzerland. In turn, the Secretariat disseminates the information to all WTO Members. The purpose of this requirement is to provide global trading partners with an opportunity to review and comment on the regulations before they become final.

The National Center for Standards and Certification Information (NCSCI) at the National Institute of Standards and Technology (NIST), distributes these proposed foreign technical regulations to U.S. stakeholders via an online service, Notify U.S. Notify U.S. is an e-mail and Web service that allows interested U.S. parties to register, obtain notifications, and read full texts of regulations from countries and for industry sectors of interest to them. To register for Notify U.S., please go to Internet URL: http://www.nist.gov/notifyus/ and click on “Subscribe”.

NCSCI is the WTO TBT Inquiry Point for the U.S. and receives all notifications and full texts of regulations to disseminate to U.S. Industry. For further information, please contact: NCSCI, NIST, 100 Bureau Drive, Gaithersburg, MD 20899-2160; Telephone: (301) 975-4040; Fax: (301) 926-1559; E-mail: ncsi@nist.gov or notifyus@nist.gov.
American National Standards

INCITS Executive Board

ANSI Accredited SDO and US TAG to ISO/IEC JTC 1, Information Technology

The InterNational Committee for Information Technology Standards (INCITS), an ANSI accredited SDO, is the forum of choice for information technology developers, producers and users for the creation and maintenance of formal de jure IT standards. INCITS’ mission is to promote the effective use of Information and Communication Technology through standardization in a way that balances the interests of all stakeholders and increases the global competitiveness of the member organizations.

The INCITS Executive Board serves as the consensus body with its oversight of programs of its 40+ Technical Committees. Additionally, the INCITS Executive Board exercises international leadership in its role as the US Technical Advisory Group (TAG) to ISO/IEC JTC 1, Information Technology.

The INCITS Executive Board has eleven membership categories that can be viewed at http://www.incits.org/participation/membership-info. Membership in all categories is always welcome. INCITS also seeks to broaden its membership base and looks to recruit new participants in the following under-represented membership categories:

- **Producer – Hardware**
  This category primarily produces hardware products for the ITC marketplace.

- **Producer – Software**
  This category primarily produces software products for the ITC marketplace.

- **Distributor**
  This category is for distributors, resellers or retailers of conformant products in the ITC industry.

- **User**
  This category includes entities that primarily reply on standards in the use of a products/service, as opposed to producing or distributing conformant products/services.

- **Consultants**
  This category is for organizations whose principal activity is in providing consulting services to other organizations.

- **Standards Development Organizations and Consortia**
  o “Minor” an SDO or Consortia that (a) holds no TAG assignments; or (b) holds no SC TAG assignments, but does hold one or more Work Group (WG) or other subsidiary TAG assignments.

- **Academic Institution**
  This category is for organizations that include educational institutions, higher education schools or research programs.

- **Other**
  This category includes all organizations who do not meet the criteria defined in one of the other interest categories.

Membership in the INCITS Executive Board is open to all directly and materially affected parties in accordance with INCITS membership rules. To find out more about participating on the INCITS Executive Board, please contact Jennifer Garner at 202-626-5737 or jgarner@itic.org. Visit www.incits.org for more information regarding INCITS activities.

Calls for Members

Society of Cable Telecommunications

ANSI Accredited Standards Developer

SCTE, an ANSI-accredited SDO, is the primary organization for the creation and maintenance of standards for the cable telecommunications industry. SCTE’s standards mission is to develop standards that meet the needs of cable system operators, content providers, network and customer premises equipment manufacturers, and all others who have an interest in the industry through a fair, balanced and transparent process.

SCTE is currently seeking to broaden the membership base of its ANSI consensus bodies and is interested in new members in all membership categories to participate in new work in fiber optic networks, advanced advertising, 3D television, and other important topics. Of particular interest is membership from the content (program and advertising) provider and user communities.

Membership in the SCTE Standards Program is open to all directly and materially affected parties as defined in SCTE’s membership rules and operating procedures. More information is available at www.scte.org or by e-mail from standards@scte.org.

ANSI Accredited Standards Developers

Approvals of Reaccreditations

FM Approvals

At the direction of ANSI’s Executive Standards Council (ExSc), the reaccreditation of FM Approvals, an ANSI Organizational Member, has been approved under its recently revised operating procedures for documenting consensus on FM Approvals-sponsored American National Standards, effective March 4, 2014. For additional information, please contact: Mr. Tom McCarty, Sr. Engineering Specialist, Quality Assurance Group, FM Approvals, 1151 Boston-Providence Turnpike, Norwood, MA 02062; phone: 781.255.4802; e-mail: Thomas.McCarty@fmapprovals.com.

Institute for Cleaning and Restoration Certification (IICRC)

At the direction of ANSI’s Executive Standards Council (ExSc), the reaccreditation of the Institute for Cleaning and Restoration Certification (IICRC), an ANSI Organizational Member, has been approved under its recently revised operating procedures for documenting consensus on IICRC-sponsored American National Standards, effective March 5, 2014. For additional information, please contact: Ms. Mili Washington, Standards Director, IICRC, 4317 NE Thurston Way, Suite 200, Vancouver, WA 98662; phone: 360.989.3030; e-mail: mili@iicrc.org.
Project Management Institute (PMI)

At the direction of ANSI’s Executive Standards Council (ExSC), the reaccreditation of the Project Management Institute (PMI), an ANSI Organizational Member, has been approved under its recently revised operating procedures for documenting consensus on PMI-sponsored American National Standards, effective February 27, 2014. For additional information, please contact: Ms. Quynh Woodward, MBA, PMP, Standards Compliance Specialist, Project Management Institute, 14 Campus Boulevard, Newtown Square, PA 19073-3299; phone: 610.356.4600 ext. 7034; e-mail: quynh.woodward@pmi.org.

Reaccreditation

IEEE

Comment Deadline: April 7, 2014

IEEE, an ANSI Organizational Member, has submitted revisions to its currently accredited IEEE-SA Standards Board Operating Manual and its IEEE-SA Standards Board Bylaws for documenting consensus on IEEE-sponsored American National Standards, under which it was last reaccredited in 2013. As the revisions appear to be substantive in nature, the reaccreditation process is initiated.

To obtain a copy of the revised procedures or to offer comments, please contact: Mr. David Ringle, Director, Governance & Technical Committee Programs, IEEE Standards Association, 445 Hoes Lane, Piscataway, NJ 08854-4141; phone: 732.562.3806; e-mail: d.ringle@ieee.org. You may view/download a copy of the revisions during the public review period at the following URL:

http://publicaa.ansi.org/sites/apdl/Documents/Forms/AllItems.aspx?RootFolder=%2fsites%2f2pdf%2fDocuments%2fStandards%20Activities%2fPublic%20Review%20and%20Comments%2f2014%20IEEE-SA%20Accreditation%20Revisions%20-%20April%207%2C%202014&View=%7b21C60355%2d2dAB17%2d4CD7%2dA090%2dBABEEC5D7C60%7d. Please submit any public comments on the revised procedures to IEEE by April 7, 2014, with a copy to the ExSC Recording Secretary in ANSI’s New York Office (e-mail: Jthompso@ANSI.org).

U.S. Technical Advisory Groups

Application for Accreditation

U.S. TAG to ISO/TC 43/SC 3 – Underwater Acoustics

Comment Deadline: April 7, 2014

The Acoustical Society of America (ASA) has submitted an Application for Accreditation for its proposed U.S. Technical Advisory Group (TAG) to ISO/TC 43/SC 3, Underwater acoustics and a request for approval as TAG Administrator. The proposed TAG will operate using its own unique operating procedures. To obtain copies of the TAG accreditation application and proposed procedures or to offer comments, please contact: Ms. Susan Blaeser, Acoustical Society of America, 35 Pinelawn Road, Suite 114E, Melville, NY 11747; phone: 631.390.0215; e-mail: sblaeser@aip.org. You may view/download copies of this documentation during the public review period at the following URL:

http://publicaa.ansi.org/sites/apdl/Documents/Forms/AllItems.aspx?RootFolder=%2fsites%2f2pdf%2fDocuments%2fStandards%20Activities%2fPublic%20Review%20and%20Comments%2f2014%20ASA%20ACoustical%20Society%20of%20America%20-%20April%207%2C%202014&View=%7b21C60355%2d2dAB17%2d4CD7%2dA090%2dBABEEC5D7C60%7d. Please submit any public comments on the TAG’s application and proposed procedures to ASA by April 7, 2014, with a copy to the ExSC Recording Secretary in ANSI’s New York Office (e-mail: Jthompso@ANSI.org).

ANSI Accreditation Program for Third Party Product Certification Agencies

Scope Extension

Advanced Compliance Solutions, Inc. (ACS)

Comment Deadline: April 7, 2014

Mr. Jeff Woods – CB Manager
Advanced Compliance Solutions, Inc. (ACS)
5015 B.U. Bowman Drive
Buford, GA 30518
Phone: 770-831-8048
Fax: 770-831-8598
E-mail: jwoods@acstestlab.com
Web: www.acstestlab.com

On February 28, 2014, Advanced Compliance Solutions, Inc. (ACS) extended its ANSI-accredited scopes to include the following:

**EPA ENERGY STAR®**
- Heating Cooling and Water Heating
- Boilers

**EPA ENERGY STAR®**
- Heating Cooling and Water Heating

Please send your comments by April 7, 2014 to Reinaldo Balbino Figueiredo, Senior Program Director, Product Certifier Accreditation, American National Standards Institute, 1899 L Street, NW, 11th Floor, Washington, DC 20036, Fax: 202-293-9287 or e-mail: rfigueir@ansi.org, or Nikki Jackson, Sr. Program Manager, Product Certifier Accreditation, American National Standards Institute, 1899 L Street, NW, 11th Floor, Washington, DC 20036, Fax: 202-293-9287 or e-mail: njackson@ansi.org.
BSR/UL 567, Standard for Safety for Emergency Breakaway Fittings, Swivel Connectors and Pipe-Connection Fittings for Petroleum Products and LP-Gas

1. Clarification and revised Moist Ammonia-Air Stress Cracking Test

1.7 A hose assembly provided with an integral swivel connector for petroleum product service shall comply with the applicable requirements in the Standard for Hose and Hose Assemblies for Dispensing Flammable Liquids, UL 330.

10 Hose Assemblies

10.1 A hose assembly provided with a swivel connector or emergency breakaway fitting for petroleum product service shall comply with the applicable requirements in the Standard for Hose and Hose Assemblies for Dispensing Flammable Liquids, UL 330. Revised and relocated as 1.7.

24 10-Day Moist Ammonia-Air Stress Cracking Test

24.1 After being subjected to the conditions described in 24.2 - 24.4, a brass part containing more than 15 percent zinc shall show no evidence of cracking when examined using 25X magnification. After being subjected to the conditions described in 24.2 - 24.3, a pressure confining brass part containing more than 15 percent zinc shall:

a) Show no evidence of cracking, delamination, or degradation or

b) Perform as intended when tested as described in 24.5.

24.2 Each test sample is to be subjected to the physical stresses normally imposed on or within a part as the result of assembly with other components. Such stresses are to be applied to the sample prior to and maintained during the test. Samples with threads, intended to be used for installing the product in the field are to have the threads engaged and tightened to the torque specified in Table 24.1. Teflon tape or pipe compound are not to be used on the threads. One test sample of each size is to be subjected to the physical stresses normally imposed on or within a part as the result of assembly with other components. Samples with female tapered pipe threads, intended to be used for installing the product in the field are to have the threads engaged and tightened to the torque specified in Table 24.1. Samples with female threads other than tapered pipe threads shall be torqued as specified by the manufacturer. Teflon tape or pipe compound is not to be used on any threads. Samples with male threads are evaluated in "as received" condition.

24.3 Three samples are to be degreased and then continuously exposed in a set position for ten days to a moist ammonia-air mixture maintained in a glass chamber approximately 305 by 305 by 305 mm having a glass cover. The samples are then to be tested in accordance with Apparatus (Section 6), Reagents and Materials (Section 7), Test Media (Section 8), Test Sample Preparation (9.3 - 9.4), and Test Procedure (10.1 - 10.4) of the Standard Test Method.
for Ammonia Vapor Test for Determining Susceptibility to Stress Corrosion Cracking in Copper Alloys, ASTM B858-06, with the test solution pH level High 10.5 ±0.1; exposure temperature of 25 ±1°C; and with the examination in accordance with 34.4.

24.4 Approximately 600 ml of aqueous ammonia having a specific gravity of 0.94 is to be maintained at the bottom of the glass chamber below the samples. The samples are to be positioned 1-1/2 inches (38.1 mm) above the aqueous ammonia solution and supported by an inert tray. The moist ammonia-air mixture in the chamber is to be maintained at atmospheric pressure and at a temperature of 34 ±2°C. After the exposure period, the samples are to be examined for cracks or other signs of stress corrosion using a microscope having a magnification of 25X.

24.5 Pressure-confining brass parts exhibiting evidence of cracking, delamination, degradation, as a result of the test exposure shall withstand the Hydrostatic Strength Test, Section 19.
BSR/UL 758, Standard for Safety for Appliance Wiring Material

1. **Miscellaneous Changes to UL 758** (For brevity, only the affected portion of the table is shown for recirculation.)

BSR/UL 1703, Standard for Flat-Plate Photovoltaic Modules and Panels

1. Updates to New Fire Performance Procedures, Including a New Construction Type Table.

16.4.1 The use of module or panel types in this Section is optional. A module or panel intended for mounting on a roof (but not BIPVs) can be classified according to type based on its construction and the results of the fire tests detailed in Section 31.1.2, Spread of Flame on Top Surface, and Section 31.1.3, Burning Brand on Top Surface. Module or panel construction types shall be evaluated based on the following characteristics of PV module and panel construction: (1) the superstrate material; (2) the encapsulant material; (3) the substrate material; and, (4) the frame type and geometry (if any). The following types are representative of common module and panel constructions and their associated fire characteristics:

Type 1 module or panel meets the following requirements:

a) Construction: Tempered glass superstrate of 0.14 ± 0.03 in (3.6 ±0.76mm) 0.125 ± 0.02 in (3.2 ±0.5mm); a polymeric encapsulant between the superstrate and cells with a pre-lamination thickness of 0.018 ± 0.008 in (0.45 ±0.2mm); either a polymeric encapsulant between the cells and substrate with a pre-lamination thickness of 0.018 ± 0.008 in (0.45 ±0.2mm) and a polymeric substrate with nominal thickness no less than 0.012 in (0.30 mm) and no more than 0.025 in (0.64 mm) thickness or a combined substrate and encapsulant that meets the pre-lamination total thickness equal to an encapsulant thickness of 0.018 ± 0.008 in (0.45 ±0.2mm) and a polymeric substrate with nominal thickness no less than 0.012 in (0.30 mm) and no more than 0.025 in (0.64 mm); a listed polymeric encapsulant with a pre-lamination thickness of 0.035 ± 0.008 in (0.9 ±0.2mm); a listed polymeric substrate with nominal thickness no less than 0.010 in (0.25 mm) and no more than 0.018 in thickness (0.46 mm) with aluminum and metallic framing protecting the edge of the laminate.

b) Spread of Flame Test on Top Surface: The test shall be conducted using the procedure given in Section 31.1.2 with an allowable spread of flame of 6 feet (1.82 m) or less in 10 minutes.

c) Burning Brand Test on Top Surface: The test shall be conducted using the procedure given in Section 31.1.3 using a C Brand.

Type 2 module or panel meets the following requirements:

a) Construction: Tempered glass superstrate of 0.14 ± 0.03 in (3.6 ±0.76mm) 0.125 ± 0.02 in (3.2 ±0.5mm); a polymeric encapsulant between the superstrate and cells with a pre-lamination thickness of 0.018 ± 0.008 in (0.45 ±0.2mm); either a polymeric encapsulant between the cells and substrate with a pre-lamination thickness of 0.018 ± 0.008 in (0.45 ±0.2mm) and a polymeric substrate with nominal thickness between 0.001 in (0.025 mm) and 0.012 in thickness (0.30 mm) or a combined substrate and encapsulant that meets the pre-lamination total thickness equal to an encapsulant thickness of 0.018 ± 0.008 in (0.45 ±0.2mm) and a polymeric substrate with nominal thickness between 0.001 in (0.025 mm) and 0.012 in thickness (0.30 mm); a listed polymeric encapsulant with a pre-lamination thickness of 0.035 ± 0.008 in (0.9 ±0.2mm); a listed polymeric substrate with nominal thickness between 0.001 in (0.025 mm) and 0.010 in thickness (0.25 mm) with aluminum and metallic framing protecting the edge of the laminate.

b) Spread of Flame Test on Top Surface: The test shall be conducted using the procedure given in Section 31.1.2 with an allowable spread of flame of 6 feet (1.82 m) or less in 10 minutes.

c) Burning Brand Test on Top Surface: The test shall be conducted using the procedure given in Section 31.1.3 using a C Brand.

Type 3 module or panel meets the following requirements:
a) Construction: Heat strengthened glass superstrate of 0.105 ± 0.030 in (2.67 ±0.76mm) 0.125 ± 0.02 in (3.2 ±0.5mm); polymeric encapsulant with a total pre-lamination thickness of 0.035 ± 0.02 in (0.9 ±0.5mm) 0.0157 ± 0.004 in (0.4 ±0.1mm); tempered glass substrate of 0.105 ± 0.030 in (2.67 ±0.76mm) 0.125 ± 0.02 in (3.2 ±0.5mm) without framing protecting the edge of the laminate.

b) Spread of Flame Test on Top Surface: The test shall be conducted using the procedure given in Section 31.1.2 with an allowable spread of flame of 6 feet (1.82 m) or less in 10 minutes.

c) Burning Brand Test on Top Surface: The test shall be conducted using the procedure given in Section 31.1.3 using a C Brand.

New types of PV modules with other constructions and fire performance can be defined as needed. Table 16.1 lists the types of PV modules based on construction and fire performance. Construction tolerances for materials should be similar to those in Types 1, 2, and 3 when establishing new types. The fire performance of these other constructions shall be tested in accordance with 31.1.2 and 31.1.3.

31.2.1.2 A fire rated module or panel intended for stand-off or rack mounting in combination with roof coverings shall be installed as shown in this Section and according the manufacturer's installation instructions for both the module and mounting system with respect to the fire performance requirements for Class A, B, or C when the module or panel is marked as being fire rated as specified in 47.11. For installations that are wider than the 40 inch (1016 mm) standard test deck, supports may need to be fabricated on which to mount the mounting system. Any support system is to be developed to ensure consistency with installation instructions and field conditions. The mounting system with installed PV module(s) or panel(s) shall be centered on the test deck and extend to the edges of the test deck. The mounted modules or panels shall be tested in combination with the following roof constructions:

**Steep-Sloped Systems - Spread of Flame and Burning Brand:** When designed for steep-sloped roofs for slopes greater than or equal to 2 in/ft (167 mm/m), a module or panel intended for stand-off or rack mounting in combination with a roof covering shall be tested in combination with the following roof construction:

a) Roofing substrate: \( \frac{3}{8} 15/32 \text{ inch} (9.5 12 \text{ mm}) \) thick plywood;
b) Underlayment: ASTM D226 Type 1 Roofing Underlayment (also known as 15 lb Roofing Felt); and

c) Roof Covering: Listed Class A 3 tab asphalt shingle, ASTM D3462, “Standard Specifications for Asphalt Shingles Made from Glass Felt and Surfaced with Mineral Granules.” As an alternate roof construction it is permitted to use any Classified rolled asphalt membrane mechanically secured over a noncombustible substrate, having demonstrated a Class A fire rating, and flame extension of at least 48 inches (1219 mm) and not more than 72 inches (1829 mm) in the average of three baseline tests.

The roof covering system must demonstrate a flame extension of at least 48 inches (1219 mm) and not more than 72 inches (1829 mm) in the average of three baseline tests.

Low-Sloped Mounting Systems - Spread of Flame: When designed for low-sloped roofs for slopes less than 2 in/ft (167 mm/m), a module or panel intended for stand-off or rack mounting in combination with a roof covering shall be tested in combination with the following roof construction:

a) Roofing substrate: 3/8 15/32 inch (9.5 12 mm) thick plywood;

b) Insulation: 4 inch (102 mm) polyisocyanurate insulation; and

c) Roof Covering: Single-ply, mechanically attached, EPDM rubber membrane with the system having demonstrated a Class A fire rating, and flame extension of at least 48 inches (1219 mm) and not more than 72 inches (1829 mm) in the average of three baseline tests. Minimum thickness 0.060 inch (1.5 mm) as identified by the manufacturer or determined as described in ASTM E4637. One roof covering system that has been found to comply is an EPDM rubber membrane, minimum thickness of 0.060 inch (1.5 mm).

The roof covering system must demonstrate a flame extension of at least 48 inches (1219 mm) and not more than 72 inches (1829 mm) in the average of three baseline tests.

Steep-Sloped Systems - Burning Brand: When designed for steep-sloped roofs for slopes greater than or equal to 2 in/ft (167 mm/m), a module or panel intended for stand-off or rack mounting in combination with a roof covering shall be tested in combination with the following roof construction:

a) Roofing substrate: 3/8 inch (9.5 mm) thick plywood;

b) Underlayment: ASTM D226 Type 1 Roofing Underlayment (also known as 15 lb Roofing Felt); and

c) Roof Covering: Listed Class A 3 tab asphalt shingle, ASTM D3462, “Standard Specifications for Asphalt Shingles Made from Glass Felt and Surfaced with Mineral Granules.”

31.2.2.1 The spread-of-flame tests are to be conducted on PV modules or panels. Tests are to be conducted using the apparatus as described in the Standard Test Methods for Fire Tests of Roof Coverings, UL 790, and the tests modified as described in the following subsections. For the tests described in (a) and (b), the modules or panels shall be evaluated in combination with the intended mounting systems as described in the accompanying manufacturer's installation instructions.

a) Spread of Flame at Roof and Module or Panel Interface Over Representative Steep Sloped Roof. With the module or panel installed on a steep slope roof as an assembly and oriented such that the fire growth from the roof covering materials advances to the interstitial space below the module or panel and above the roof. Mounting equipment that prevents flame in the interstitial space is permitted to meet this requirement. The module or panel installation shall be installed
with a minimum of 36 inches (910 mm) between the edge of the flame test apparatus and the edge of the PV mounting system. The module or panel installation for steep sloped roofs shall be the measured baseline in accordance with 31.2.1.2 minus 12 inches (303 mm). Figure 31.2 illustrates how the baseline roof tests are used to establish the location of PV mounting system relative to the test flame. Figures 31.3 and 31.4 illustrate where the test sample is to be located relative to the test flame. The rating obtained for a 5-inch (127 mm) gap between the bottom of the module frame and the roof covering surface can be used for any other gaps allowed by the mounting instructions. This test is not required if the Installation Instructions require that the module or panel only be installed for slopes less than 2 inches/foot (167 mm/m).

b) Spread of Flame at Roof and Module or Panel Interface Over Representative Low Sloped Roof. With the module or panel installed on a low slope roof as an assembly and oriented such that the fire growth from the roof covering materials advances to the interstitial space below the module or panel and above the roof. Mounting equipment that prevents flame in the interstitial space is permitted to meet this requirement. For low sloped roofs, the module or panel installation shall be installed with a minimum of 36 inches (910 mm) between the edge of the flame test apparatus and the edge of the PV mounting system. The module or panel installation for low sloped roofs shall be the measured baseline in accordance with 31.2.1.2 minus 12 inches (303 mm). For products with asymmetrical edge configurations, these dimensions apply to each of the 3 tests described in 31.2.1.3. Figures 31.5 - 31.12 illustrate where the test sample is to be located relative to the test flame. If no gap height is specified in the manufacturer's instructions, a 5-inch (127 mm) gap between the bottom of the module frame and the roof covering surface shall be used with the module or panel parallel to the roof surface. The rating obtained for a 5-inch (127 mm) gap can be used for any other gaps allowed by the mounting instructions. This test is not required if the Installation Instructions require that the module or panel only be installed for slopes greater than 2 inches/foot (167 mm/m).

Note: Testing during the development of fire testing procedures suggest that 5 inches (127 mm) is a worst case condition.
1. Vent Test Temperature and Rating Clarification

PROPOSAL

19.3 The temperature of the vent gases or heated air entering the test venting system is to be adjusted to 70°F (38.8°C) above the rated temperature at the minimum input specified in Table 19.1. If a gas burner is used, combustion of fuel gases is to be complete within the combustion chamber of the vent gas generator.

\(^1\) The actual test temperature is the specified value plus 70°F (38.8°C) as noted in 19.3.

19.5 Upon successful completion of test, the vent temperature rating shall be equal to the minimum rated vent input temperature selected from Table 19.1 less 70°F (38.8°C).
1. Operation Test – Test container size

12.2 Three samples of the overfilling prevention device are to be installed on valves as recommended by the manufacturer, as appropriate, and are to be individually installed into a representative DOT container as intended in service or ASME container as noted in Table 12.1 and connected to a fuel transfer valve. LP-Gas shall be allowed to flow into the container through each sample until the overfilling prevention device functions.
