American National Standards
Call for comment on proposals listed

This section solicits public comments on proposed draft new American National Standards, including the national adoption of ISO and IEC standards as American National Standards, and on proposals to revise, reaffirm or withdraw approval of existing American National Standards. A draft standard is listed in this section under the ANSI-accredited standards developer (ASD) that sponsors it and from whom a copy may be obtained. Comments in connection with a draft American National Standard must be submitted in writing to the ASD no later than the last day of the comment period specified herein. Such comments shall be specific to the section(s) of the standard under review and include sufficient detail so as to enable the reader to understand the commenter’s position, concerns and suggested alternative language, if appropriate. Please note that the ANSI Executive Standards Council (ExSC) has determined that an ASD has the right to require that interested parties submit public review comments electronically, in accordance with the developer’s procedures.

Ordering Instructions for “Call-for-Comment” Listings
1. Order from the organization indicated for the specific proposal.
2. Use the full identification in your order, including the BSR prefix; for example, Electric Fuses BSR/SAE J554.
3. Include remittance with all orders.
4. BSR proposals will not be available after the deadline of call for comment.

Comments should be addressed to the organization indicated, with a copy to the Board of Standards Review, American National Standards Institute, 25 West 43rd Street, New York, NY 10036. Fax: 212-840-2298; e-mail: psa@ansi.org

* Standard for consumer products
ASPE (American Society of Plumbing Engineers)

New Standard

BSR/ARCSA/ASPE 78-201x, Stormwater Harvesting System Design for Direct End-Use Applications (new standard)
This Standard covers onsite, single-property stormwater catchment systems that utilize the principle of collecting and using precipitation or rain from non-rooftop and other impervious surfaces at, below, and above grade. The objectives of this Standard are to provide guidance on how to provide and maintain a safe alternative to utility-provided water and to optimize stormwater utilization.

ADA (American Dental Association)

New Standard

BSR/ADA Standard No. 1079-201x, Standard Content of Electronic Attachments for Dental Claims (new standard)
This standard describes content for electronic dental claims attachments to third party payers.
Single copy price: $25.00
Obtain an electronic copy from: wardm@ada.org
Order from: Marilyn Ward, (312) 440-2506, wardm@ada.org
Send comments (with copy to psa@ansi.org) to: Paul Bralower, (312) 587-4129, bralowerp@ada.org

UL (Underwriters Laboratories, Inc.)

Revision

BSR/UL 676-201x, Standard for Safety for Underwater Luminaires and Submersible Junction Boxes (revision of ANSI/UL 676-2013)
Proposals for marking of isolated low-voltage luminaires and for submersible luminaires.
Click here to view these changes in full
Send comments (with copy to psa@ansi.org) to: Barbara Davis, (408) 754-6722, Barbara.J.Davis@ul.com

Revision

BSR/UL 844-201X, Standard for Safety for Luminaires (Proposal dated 05-29-15) (revision of ANSI/UL 844-2012)
This proposal includes a revision to add new paragraph 37.5 to the standard.
Click here to view these changes in full
Send comments (with copy to psa@ansi.org) to: Vickie Hinton, (919) 549-1851, Vickie.T.Hinton@ul.com

Revision

BSR/UL 1238-201x, Standard for Safety for Control Equipment for Use with Flammable Liquid Dispensing Devices (revision of ANSI/UL 1238-2008 (R2013))
The following topics are being proposed: (1) User-replaceable fuse marking; (2) Update and clarification of Flammability Test; and (3) Update references to motor standards.

ADA (American Dental Association)

Reaffirmation

BSR/ADA Standard No. 1000-2010 (R201x), Standard Clinical Data Architecture (reaffirmation of ANSI/ADA Specification No. 1000-2010)
Patient health information is a critical element in the healthcare decision-making process. Accurate information is essential for timely, appropriate, and quality health services. This standard provides a logical data model for persistent patient data in healthcare information systems that can be engineered into a database supporting various clinical functions such as electronic health records, clinical decision support, imaging, and referrals.
Single copy price: $158.00
Obtain an electronic copy from: wardm@ada.org
Order from: Marilyn Ward, (312) 440-2506, wardm@ada.org
Send comments (with copy to psa@ansi.org) to: Paul Bralower, (312) 587-4129, bralowerp@ada.org

ASA (ASC S3) (Acoustical Society of America)

Revision

BSR ASA S3.41-201x, Audible Emergency Evacuation (E2) and Evacuation Signals with Relocation Instructions (ESRI) (revision of ANSI ASA S3.41-1990 (R2008))
Specifies the characteristics of acoustic signals to be used for audible emergency evacuation (E2) and audible evacuation signals with relocation instructions (ESRI). It applies to the audible signal only and not to the signaling system components or equipment. The use of these signals either as the only audible means of signaling or as part of a voice message is subject to the requirements of governing laws, codes, or other standards.
Single copy price: $90.00

**ASSE (ASC Z9) (American Society of Safety Engineers) Revision**

BSR/ASSE Z9.11-201x, Laboratory Decommissioning (revision and redesignation of ANSI/AIHA Z9.11-2008)

A strategy to perform a risk assessment of a research space and to ensure the safety and readiness for the demolition worker to begin work and/or for the next occupant is provided in this standard. This publication identifies the minimum acceptable criteria for completing the decommissioning process, and documenting the necessary information for regulatory and historical purposes. Those involved in the development of a decommissioning plan for a research laboratory of any size will benefit by this guidance document. References, tables, and other resources for assessing the risk level of the project are also included.

**AWS (American Welding Society) Revision**

BSR/AWS B2.1-1/8-231:201X, Standard Welding Procedure Specification (SWPS) for Gas Tungsten Arc Welding with Consumable Insert Root followed by Shielded Metal Arc Welding of Carbon Steel (M-1/P-1, Groups 1 or 2) to Austenitic Stainless Steel (M-8/P-8, Group 1), 1/8 inch [3 mm] through 1-1/2 inch [38 mm] Thick, IN309, ER309M, and E309-15, -16, or -17, or IN309L, E309(L), and E309(L)-15, -16, or -17, in the As-Welded Condition, Primarily Pipe Applications (revision of ANSI/AWS B2.1-1/8-231-2002)

This standard contains the essential welding variables for welding carbon steel to austenitic stainless steel in the thickness range of 1/8 inch [3 mm] through 1-1/2 inch [38 mm], using manual gas tungsten arc welding, with consumable insert root, followed by shielded metal arc welding. It cites the base metals and operating conditions necessary to make the weldment, the filler metal specifications and the allowable joint designs for groove welds.

This SWPS was developed primarily for pipe applications.

**PLASA (PLASA North America) New Standard**

BSR/PLASA E1.46-201x, Standard for the Prevention of Falls from Theatrical Stages and Raised Performance Platforms (new standard)

The users of theatrical stages and raised platforms can suffer debilitating injuries from falls into orchestra pits, open stage lifts, and similar openings in stage floors. Health and safety regulations require action to prevent these falls by employees, but offer little guidance that is suitable for theatrical environments. This document would provide that guidance for all people at risk, including employees.

IEEE (Institute of Electrical and Electronics Engineers)

New National Adoption

This part of ISO/IEC 15026 defines assurance-related terms and establishes an organized set of concepts and relationships to establish a basis for shared understanding across user communities for assurance. It provides information to users of the other parts of ISO/IEC 15026 including the combined use of multiple parts. The essential concept introduced by ISO/IEC 15026 is the statement of claims in an assurance case and the support of those claims through argumentation and evidence. These claims are in the context of assurance for properties of systems and software within life cycle processes for the system or software product.

New Standard

BSR/IEEE 1642-201x, Recommended Practice for Protecting Publicly Accessible Computer Systems from Intentional Electromagnetic Interference (IEMI) (new standard)
This recommended practice establishes appropriate electromagnetic (EM) threat levels, protection methods, monitoring techniques, and test techniques for specific classes of computer equipment. This equipment is expected to be accessible to the public at ranges less than 100 meters, and the loss of operation of the equipment due to intentional electromagnetic interference (IEMI) is expected to cause losses (both financial and of confidence) to businesses operating computer equipment, which are providing services to the public or to private companies.

IEEE (Institute of Electrical and Electronics Engineers)  
Revision  
BSR/IEEE 802.1AX-201x, Standard for Local and Metropolitan Area Networks - Link Aggregation (revision of ANSI/IEEE 802.1AX-2008)  
Link Aggregation allows parallel full duplex point-to-point links to be used as if they were a single link, and also supports the use of multiple links as a resilient load-sharing interconnect between multiple nodes in two separately administered networks. This standard defines a MAC independent Link Aggregation capability, and general information relevant to specific to MAC types.  
Single copy price: 345.00 (pdf); $414.00 (print)

IEEE (Institute of Electrical and Electronics Engineers)  
Revision  
This guide discusses both on-line and off-line partial discharge (PD) measurements on complete windings of any type, as well as measurements on individual form-wound coils and bars. Measurements selected from those that are outlined may be appropriate for application during the manufacture, installation, operation, and maintenance of windings of ac electric machinery.

IEEE (Institute of Electrical and Electronics Engineers)  
Revision  
BSR/IEEE 1566-201x, Standard for Performance of Adjustable-Speed AC Drives Rated 375 kW and Larger (revision of ANSI/IEEE 1566-2006)  
This standard applies to ac adjustable speed drive (ASD) systems rated above 375 kW and above 750 V output voltage as used in petrochemical and similar applications. It covers the performance requirements for an ASD system including, but not limited to, input transformer or reactor as required, power electronics, control interfaces, cooling system, switchgear, and motor. Requirements for power quality, engineering analysis, start-up assistance, training, and spare parts are also included.

Revision  
BSR/IEEE C37.11-201x, Standard Requirements for Electrical Control for AC High-Voltage (>1000 V) Circuit Breakers (revision of ANSI/IEEE C37.11-1997 (R2004))  
This standard establishes basic requirements for the control schemes of electrically controlled ac high-voltage circuit breakers rated above 1000V. This standard is applicable to any type of power-operated mechanism and for both ac and dc control power. Only the basic control elements of the circuit breaker, including reclosing where required, are included in this standard.

Technical Reports Registered with ANSI  
Technical Reports Registered with ANSI are not consensus documents. Rather, all material contained in Technical Reports Registered with ANSI is informational in nature. Technical reports may include, for example, reports of technical research, tutorials, factual data obtained from a survey carried out among standards developers and/or national bodies, or information on the "state of the art" in relation to standards of national or international bodies on a particular subject.  
Immediately following the end of a 30-day announcement period in Standards Action, the Technical Report will be registered by ANSI. Please submit any comments regarding this registration to the organization indicated, with a copy to the PSA Center, American National Standards Institute, 25 West 43rd Street, New York, NY 10036 or E-Mail to psa@ansi.org.

ITI (INCITS) (InterNational Committee for Information Technology Standards)  
ISO/IEC TR 15443-1:2012 defines terms and establishes an extensive and organized set of concepts and their relationships for understanding IT security assurance, thereby establishing a basis for shared understanding of the concepts and principles central to ISO/IEC TR 15443 across its user communities. It provides information fundamental to users of ISO/IEC TR 15443-2.  
Single copy price: $60.00  
Order from: http://webstore.ansi.org  
Send comments (with copy to psa@ansi.org) to: comments@itic.org
ITI (INCITS) (InterNational Committee for Information Technology Standards)

ISO/IEC TR 15443-2:2012 builds on the concepts presented in ISO/IEC TR 15443-1. It provides a discussion of the attributes of security assurance conformity assessment methods that contribute towards making assurance claims and providing assurance evidence to fulfill meeting the assurance requirements for a deliverable

Projects Withdrawn from Consideration
An accredited standards developer may abandon the processing of a proposed new or revised American National Standard or portion thereof if it has followed its accredited procedures. The following projects have been withdrawn accordingly:

API (American Petroleum Institute)
BSR/API Standard 534-201x, Heat Recovery Steam Generators for Combustion Turbine Exhaust Applications (new standard)
Inquiries may be directed to Nathaniel Wall, (202) 682-8157, walln@api.org

ITI (INCITS) (InterNational Committee for Information Technology Standards)

Associated with the provision and operation of a Trusted Third Party (TTP) are a number of security-related issues for which general guidance is necessary to assist business entities, developers and providers of systems and services, etc. This includes guidance on issues regarding the roles, positions and relationships of TTPs and the entities using TTP services, the generic security requirements, who should provide what type of security, what the possible security solutions are, and the operational use and management of TTP service security.
Single copy price: $60.00
Order from: http://webstore.ansi.org
Send comments (with copy to psa@ansi.org) to: comments@iti.org

ITI (INCITS) (InterNational Committee for Information Technology Standards)

ISO/IEC TR15446:2009 provides guidance relating to the construction of Protection Profiles (PPs) and Security Targets (STs) that are intended to be compliant with the third edition of ISO/IEC 15408. It is also applicable to PPs and STs compliant with Common Criteria Version 3.1, a technically identical standard published by the Common Criteria Management Board, a consortium of governmental organizations involved in IT security evaluation and certification.
Single copy price: $60.00
Order from: http://webstore.ansi.org
Send comments (with copy to psa@ansi.org) to: comments@iti.org
Call for Members (ANS Consensus Bodies)

Directly and materially affected parties who are interested in participating as a member of an ANS consensus body for the standards listed below are requested to contact the sponsoring standards developer directly and in a timely manner.

ASSE (ASC Z9) (American Society of Safety Engineers)
Office: 520 N. Northwest Highway
       Park Ridge, IL  60068

Standards Action - May 29, 2015 - Page 12 of 38 Pages

Project Initiation Notification System (PINS)

ANSI Procedures require notification of ANSI by ANSI-accredited standards developers (ASD) of the initiation and scope of activities expected to result in new or revised American National Standards (ANS). Early notification of activity intended to reaffirm or withdraw an ANS and in some instances a PINS related to a national adoption is optional. The mechanism by which such notification is given is referred to as the PINS process. For additional information, see clause 2.4 of the ANSI Essential Requirements: Due Process Requirements for American National Standards.

Following is a list of proposed actions and new ANS that have been received recently from ASDs. Please also review the section in Standards Action entitled "American National Standards Maintained Under Continuous Maintenance" for additional or comparable information with regard to standards maintained under the continuous maintenance option. To view information about additional standards for which a PINS has been submitted and to search approved ANS, please visit www.NSSN.org, which is a database of standards information. Note that this database is not exhaustive.

Directly and materially affected interests wishing to receive more information or to submit comments are requested to contact the standards developer directly within 30 days of the publication of this announcement.

AAMI (Association for the Advancement of Medical Instrumentation)
Office: 4301 N Fairfax Drive
       Suite 301
       Arlington, VA  22203-1633
Contact: Colleen Elliott
Fax: (703) 276-0793
E-mail: celliott@aami.org

BSR/AAMI/ISO 18190-201x, Anaesthetic and respiratory equipment - General requirements for airways and related equipment (identical national adoption of ISO 18190)

Stakeholders: Airways and related equipment manufacturers, clinicians.

Project Need: To consolidate requirements for airways and related equipment.

 Specifies the general requirements common to airways and related equipment and applies to those device-specific standards that reference them.

API (American Petroleum Institute)
Office: 1220 L Street, NW
       Washington, DC  20005-4070
Contact: Nathaniel Wall
E-mail: walni@api.org

BSR/API Standard 565-201x, Reactor Furnaces in Sulfur Recovery Units for General Refinery Service (new standard)

Stakeholders: Petroleum, natural gas, and petrochemical industry equipment manufacturers-service suppliers, petroleum refinery/petrochemical plant owner-operators and consultants/contracted experts (other).

Project Need: There is currently no industry standard for the safe design, operation, and maintenance of reactor furnaces used in sulfur recovery units. The industry currently relies on equipment suppliers and owner/operator internal standards, which vary from company to company. The lack of an industry standard fosters uncertainties among contractors, vendors, and owner/operators regarding minimum requirements. This can lead to design delays, extra engineering work, added costs, and substandard installations.

This standard provides recognized industry requirements and guidance for the design, specification, fundamental operation, instrumentation, control, protective systems, and maintenance of sulfur recovery unit reaction furnaces used in general refinery service. It also includes guidance on safe operation, maintenance, and burner control of these units. The scope of this standard includes application in both air-only and oxygen-enriched modified Claus process operations.

BSR/Standard 561-201x, Reforming Furnaces for Hydrogen and Syngas Production (new standard)

Stakeholders: Petroleum, natural gas, and petrochemical industry equipment manufacturers-service suppliers, petroleum refinery/petrochemical plant owner-operators and consultants/contracted experts (other).

Project Need: This standard is needed to increase equipment safety, reliability, and efficiency and to lower repair costs in the refining industry. This standard will replace often-conflicting design specifications and operating guidelines presently used by refineries, contractors, licensors, and vendors. From experience, this has led to several safety and reliability issues that would have been resolved if a suitable standard had been available.

Specifies the requirements and gives recommendations for the design, materials, fabrication, instruments/controls/protective systems, inspection, testing, preparation for shipment, and erection that are unique to externally fired steam reforming furnaces for hydrogen and synthesis gas production (steam hydrocarbon reformers) in refining and chemical plant applications. This standard covers all firing configurations including, but not limited to, multilevel upfired, top-fired, bottom-fired and side-fired designs. This standard does not include upstream or downstream reforming equipment (pre-reformers, post-reformers, secondary reformers, or autothermal reformers).

ASABE (American Society of Agricultural and Biological Engineers)
Office: 2950 Niles Road
       St Joseph, MI  49085
Contact: Carla VanGilder
Fax: (269) 429-3852
E-mail: vangilder@asabe.org

BSR/ASAE S315.5 MONYEAR-201x, Agricultural Baling Twine for Automatic Balers (revision and redesignation of ANSI/ASAE S315.4-2012)

Stakeholders: Twine producers, large square baler manufacturers, users of agricultural baler twine.

Project Need: Add a twine ball package size category for large square balers with larger limits than currently specified. The current package size limits will continue to exist as a Category 1 twine ball and limits for the larger twine ball specified as a Category 2 twine ball. The larger package size will provide an alternative for greater twine carry capability of large square balers.

This standard is to provide uniform polyolefin and sisal agricultural baler twine specifications to ensure satisfactory performance in round and square balers and have adequate durability in normal storage and handling of baled forage and biomass materials. It is intended to cover agricultural baler twines manufactured for use in round balers, small square balers, and large square balers. It is not intended to restrict manufacturers in the use of materials or manufacturing processes, rather create a minimum expectation of baler twine product performance.
Details test and examination criteria for gas-fired high-intensity infrared heaters for use with natural, manufactured, mixed, and liquefied petroleum (propane) gases and may be convertible for use with natural and LP-gases. Applies to heaters for installation in and heating of outdoor spaces or nonresidential indoor spaces where flammable gases or vapors are not generally present.

Stakeholders: Surface Burning industry.
Project Need: The purpose of this new mounting method is to provide a standardized mounting procedure for plastic pipe and tubing and associated products and materials for testing according the ASTM E84.

http://www.astm.org/DATABASE.CART/WORKITEMS/WK50028.htm

BSR/ASTM WK50034-201x, New Specification for Football Helmet Eye Shield Visors (new standard)

Stakeholders: Eye Safety for Sports industry.
Project Need: This specification covers polymer-type eye protectors designed to attach to and compliment football helmet faceguards so to provide for additional protection and reduce injury to the eye and adnexa due to impact on the field of play from objects which may penetrate the protection provided by the grid of the helmet faceguard.

http://www.astm.org/DATABASE.CART/WORKITEMS/WK50034.htm

BSR C63.29-201x, Standard for Compliance Testing of LED Lighting Products (new standard)
Stakeholders: Telecom, consumer, government, test laboratories, certification bodies, LED lighting manufacturers, trade associations.
Project Need: A new standard is needed to test compliance of LED lighting products with applicable radio regulatory requirements. This standard is intended to include procedures for compliance testing of general illumination lighting products with applicable radio regulatory requirements. This standard encompass various technologies, from traditional lighting like (fluorescent and HID) as well as novel technologies (like LED and other). Related national and international standards (e.g., CISPR 15, ANSI C63.4) will be reviewed and used to the extent possible.

BSR C63.30-201x, Standard for Compliance Testing of Wireless Power Transfer Products (new standard)
Stakeholders: Telecom, consumer, government, test laboratories, certification bodies, WPT manufacturers.
Project Need: A new standard is needed to test compliance of Wireless Power Transfer (WPT) products with applicable EMC and radio regulatory requirements. This standard is intended to include procedures for compliance testing of several different types of Wireless Power Transfer (WPT) products with applicable electromagnetic compatibility (EMC) and radio regulatory requirements. Test procedures will focus on radiated field and conducted measurements and may reference established standards. WPT RF exposure compliance procedures will not be included, although standards pertaining to laboratory EMF safety may be referenced. WPT testing methods may consider, but are not limited to, large in-situ installations, charging systems for electric vehicles, and household appliances.

BSR C63.31-201x, Standard for Compliance Testing of Industrial, Scientific and Medical (ISM) Equipment (new standard)
Stakeholders: Telecom, consumer, government, test laboratories, certification bodies, ISM manufacturers, trade associations.
Project Need: A new standard is needed to test compliance of ISM equipment with applicable radio regulatory requirements. This standard is intended to include procedures for compliance testing of traditional ISM equipment (industrial heaters, dielectric heaters, food tempering equipment, microwave ovens, medical diathermy equipment, etc.) with applicable EMC and radio regulatory requirements. Related national and international standards (e.g., CISPR, IEEE) will be reviewed and used to the extent possible.
This standard describes the general principles for selection of cracking-resistant materials. The second part describes cracking-resistant carbon and low-alloy steels, and the use of cast irons. The third part describes cracking-resistant CRAs (corrosion-resistant alloys) and other alloys.

SAE (SAE International)
Office: 755 W. Big Beaver Rd., Suite 160
Troy, MI 48084
Contact: Jennifer Collins
Fax: (248) 273-2494
E-mail: jennifer.collins@sae.org

Stakeholders: Motor Vehicle Glazing Manufacturing industry, Motor Vehicle Manufacturing industry, motor vehicle consumers and drivers.
Project Need: Changing International and United States automotive safety glazing standards have created a fragmented array of requirements for safety glazing manufacturers. Current standards contain obsolete information. This project will create a standard, including glass and plastic glazing materials, with usage and installation provisions, well formatted and organized, improving the language of current standards with details and clarification of tests to provide a document defensible by glazing experts.
This standard prescribes test methods with minimum performance specifications, and provides vehicle location specifications for safety glazing materials for glazing motor vehicles and motor vehicle equipment operating on land highways.

SBCA (Structural Building Components Association)
Office: 6300 Enterprise
Madison, WI 53719
Contact: Kirk Grundahl
Fax: (608) 274-3329
E-mail: kgrundahl@qualtim.com

* BSR/SBCA FS-200-201x, Standard Requirements for the Testing, Design and Application of Foam Plastic Insulation Used as Sheathing for Building Enclosure Applications (new standard)
Stakeholders: Foam sheathing manufacturers, chemical suppliers, building component manufacturers, energy code users, builders, framers, DOE.
Project Need: This standard is for the testing/quality control, performance characteristics, and design and application of foam plastic insulation used as building enclosure sheathing, and is needed because none currently exists.
Provides a specification for the testing/quality control, performance characteristics, design and application of foam plastic insulation used as sheathing onto the structural framework of a building. The main focus of this standard will be on the application of foam sheathing on typical wall assemblies with regard to performance as a water-resistive barrier. Other applications such as air-barrier, thermal barrier, and noise barrier may also be addressed as these products often have multiple functional attributes. Structural concerns may also be addressed, such as cladding connections in the context of water-resistive barriers/wind-pressure resistance, etc.

TAPPI (Technical Association of the Pulp and Paper Industry)
Office: 15 Technology Parkway South
Peachtree Corners, GA 30092
Contact: Charles Bohanan
Fax: (770) 446-6947
E-mail: standards@tappi.org

BSR/TAPPI T 419 om-201x, Starch in paper (new standard)
Stakeholders: Manufacturers of pulp, paper, packaging, or related products, consumers or converters of such products, and suppliers of equipment, supplies, or raw materials for the manufacture of such products.
Project Need: To conduct required five-year review of an existing TAPPI standard in order to revise it if needed to address new technology or correct errors.
This method describes the qualitative and the quantitative determination of unmodified starches and starches modified only by conventional oxidation techniques or enzyme conversion, which are used for beater addition or surface sizing.

BSR/TAPPI T 830 om-201x, Ink rub test of container board and corrugated board (new standard)
Stakeholders: Manufacturers of pulp, paper, packaging, or related products, consumers or converters of such products, and suppliers of equipment, supplies, or raw materials for the manufacture of such products.
Project Need: To conduct required five-year review of an existing TAPPI standard in order to revise it if needed to address new technology or correct errors.
Ink rub testers are designed to evaluate the scuffing or rubbing resistance of an ink film or fiber surface on container board and corrugated board. A variety of tests may be made, including: dry rub; wet rub; wet bleed or transfer; wet smear; and functional rub.
BSR/TIA 102.BAEA-C-201x, Data Overview and Specification (revision and redesignation of ANSI/TIA 102.BAEA-B-2012)
Stakeholders: APCO Project 25, Private Land Mobile Radio manufacturers and users.
Project Need: Provide updates for an existing standard.
The objective of this document is to provide an overview of TIA-102 Data Services. The information necessary to enable interoperable interfaces, services, and functionality for TIA-102 Data Services is provided in this document or referenced in other documents as appropriate.

BSR/TIA 102.BAEE-C-201x, Radio Management Protocols (revision and redesignation of ANSI/TIA 102.BAEE-B-2010)
Stakeholders: APCO Project 25, Private Land Mobile Radio manufacturers and users.
Project Need: Provide updates for an existing standard.
The objective of this document is to provide a specification of the Radio Management Protocols for the A Interface. The information necessary to enable interoperable radio management services and functionality over this interface is provided in this document or referenced in other documents as appropriate. The radio management protocols support the following three functions: (a) signaling used by the MDP to configure the SU, (b) signaling to request information from the SU, and (c) signaling related to alarm reporting or other unsolicited event reports generated by the SU.
American National Standards Maintained Under Continuous Maintenance

The ANSI Essential Requirements: Due Process Requirements for American National Standards provides two options for the maintenance of American National Standards (ANS): periodic maintenance (see clause 4.7.1) and continuous maintenance (see clause 4.7.2). Continuous maintenance is defined as follows:

The standard shall be maintained by an accredited standards developer. A documented program for periodic publication of revisions shall be established by the standards developer. Processing of these revisions shall be in accordance with these procedures. The published standard shall include a clear statement of the intent to consider requests for change and information on the submittal of such requests. Procedures shall be established for timely, documented consensus action on each request for change and no portion of the standard shall be excluded from the revision process. In the event that no revisions are issued for a period of four years, action to reaffirm or withdraw the standard shall be taken in accordance with the procedures contained in the ANSI Essential Requirements.

The Executive Standards Council (ExSC) has determined that for standards maintained under the Continuous Maintenance option, separate PINS announcements are not required. The following ANSI Accredited Standards Developers have formally registered standards under the Continuous Maintenance option.

- AAMI (Association for the Advancement of Medical Instrumentation)
- AAMVA (American Association of Motor Vehicle Administrators)
- AGA (American Gas Association)
- AGSC (Auto Glass Safety Council)
- ASC X9 (Accredited Standards Committee X9, Incorporated)
- ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.)
- ASME (American Society of Mechanical Engineers)
- ASTM (ASTM International)
- GBI (The Green Building Initiative)
- GEIA (Greenguard Environmental Institute)
- HL7 (Health Level Seven)
- IESNA (The Illuminating Engineering Society of North America)
- MHI (ASC MH10) (Material Handling Industry)
- NAHBRC (NAHB Research Center, Inc.)
- NBBPVI (National Board of Boiler and Pressure Vessel Inspectors)
- NCPDP (National Council for Prescription Drug Programs)
- NISO (National Information Standards Organization)
- NSF (NSF International)
- PRCA (Professional Ropes Course Association)
- RESNET (Residential Energy Services Network)
- TIA (Telecommunications Industry Association)
- UL (Underwriters Laboratories, Inc.)

To obtain additional information with regard to these standards, including contact information at the ANSI Accredited Standards Developer, please visit ANSI Online at www.ansi.org/asd; select "Standards Activities," click on "Public Review and Comment" and "American National Standards Maintained Under Continuous Maintenance." This information is also available directly at www.ansi.org/publicreview.

Alternatively, you may contact the Procedures & Standards Administration department (PSA) at psa@ansi.org or via fax at 212-840-2298. If you request that information be provided via E-mail, please include your E-mail address; if you request that information be provided via fax, please include your fax number. Thank you.
## ANSI-Accredited Standards Developers Contact Information

The addresses listed in this section are to be used in conjunction with standards listed in PINS, Call for Comment and Final Actions. This section is a list of developers who have submitted standards for this issue of Standards Action – it is not intended to be a list of all ANSI-Accredited Standards Developers. Please send all address corrections to Standards Action Editor at standact@ansi.org.

Standards Action - May 29, 2015 - Page 17 of 38 Pages
Announcement of Proposed Procedural Revisions

to the

ANSI PROCEDURES FOR U.S. PARTICIPATION IN THE
INTERNATIONAL STANDARDS ACTIVITIES OF ISO
“ANSI International Procedures”

Comment Deadline: July 20, 2015

The proposed revisions to the ANSI International Procedures are intended to clarify and update the 2015 edition to promote consistency with current ANSI and ISO protocols, practices and procedures. Please note that editorial updates, such as consistent use of acronyms or terms, are not displayed in the document.

To view the proposed revisions, please use this link: ExSC_047_2015.

Comments with regard to these proposed revisions should be submitted to the Recording Secretary of the ANSI Executive Standards Council (ExSC) at psa@ansi.org no later than July 20, 2015.

The ANSI Executive Standards Council (ExSC) will consider all public comments received by the comment deadline and commenters will be provided with a written response.

Thank you for your interest.

Questions should be directed to psa@ansi.org
ISO & IEC Draft International Standards

This section lists proposed standards that the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC) are considering for approval. The proposals have received substantial support within the technical committees or subcommittees that developed them and are now being circulated to ISO and IEC members for comment and vote. Standards Action readers interested in reviewing and commenting on these documents should order copies from ANSI.

Comments

Comments regarding ISO documents should be sent to ANSI’s ISO Team (isot@ansi.org); those regarding IEC documents should be sent to Charles T. Zegers, General Secretary of the USNC (czegers@ansi.org). The final date for offering comments is listed after each draft.

ISO Standards

AIRCRAFT AND SPACE VEHICLES (TC 20)
ISO/DIS 27852, Space systems - Estimation of orbit lifetime - 8/28/2015, FREE

QUALITY MANAGEMENT AND CORRESPONDING GENERAL ASPECTS FOR MEDICAL DEVICES (TC 210)
ISO/DIS 15225, Medical devices - Quality management - Medical device nomenclature data structure - 8/24/2015, $26.00
ISO/DIS 80369-1, Small-bore connectors for liquids and gases in healthcare applications - Part 1: General requirements - 8/24/2015, $26.00

RUBBER AND RUBBER PRODUCTS (TC 45)
ISO/DIS 37, Rubber, vulcanized or thermoplastic - Determination of tensile stress-strain properties - 8/23/2015, $98.00
ISO/DIS 11759, Rubber hoses and hose assemblies for dispensing liquefied petroleum gases (LPGs) - Specification - 6/21/2015, FREE

STEEL (TC 17)
ISO/DIS 3575, Continuous hot-dip zinc-coated and zinc-iron alloy-coated carbon steel sheet of commercial and drawing qualities - 7/22/2015, $67.00
ISO/DIS 13976, Hot-rolled steel sheet in coils of structural quality and heavy thickness - 7/22/2015, $53.00

IEC Standards

13/1639/FDIS, IEC 62052-31: Electricity Metering Equipment (AC) - General Requirements, Tests and Test Conditions - Part 31: Product safety requirements and tests, 07/24/2015
17A/1094/CD, IEC 62271-111 Ed.3: High-voltage switchgear and controlgear - Part 111: Automatic circuit reclosers and fault interrupters for alternating current systems up to 38 kV, 08/28/2015
18/1460/FDIS, IEC 60533: Electrical and electronic installations in ships - Electromagnetic compatibility (EMC) - Ships with a metallic hull, 07/22/2015
21A/583/NP, IEC 63005-2: Coin type secondary lithium cells and batteries, 08/28/2015
22H/191/CDV, IEC 62040-5-3 Ed.1: Uninterruptible power systems (UPS) - Part 5-3: d.c. output UPS - Performance and test requirements, 08/28/2015
31/1197/CD, IEC 60079-0/Ed7: Explosive atmospheres - Part 0: Equipment - General requirements, 08/28/2015
44/728/CDV, IEC 62745: Safety of machinery - General requirements for cableless control systems of machinery, 08/28/2015
57/1578/DC, IEC 61850-90-2 TR Ed.1: Communication networks and systems for power utility automation - Part 90-2: Using IEC 61850 for the communication between substations and control centres, 07/24/2015
57/1579/DC, IEC 61968-900 TR Ed.1: Application integration at electric utilities - System interfaces for distribution management - Part 900: Guidance to implementations of IEC 61968-9, 07/24/2015
61/4949/NP, IEC 60335-2-XXX Ed 1.0: Household and similar appliances - Safety - Part 2- XXX: Particular requirements for electrical furniture, 08/28/2015
64/2008/CDV, IEC 60364-6: Low voltage electrical installation - Part 6: Verification, 08/28/2015
64/2017/CD, IEC 60364-5-56: Low-voltage electrical installations - Part 5-56: Selection and erection of electrical equipment - Safety services, 08/28/2015
65/592/CDV, IEC 61010-2-202 Ed.1: Safety requirements for electrical equipment for measurement, control and laboratory use - Part 2-202: Particular requirements for electrically operated valve actuators, 08/28/2015
72/999/DC, TC72/WS6 Proposal for revision of IEC 60730-2-15, Automatic electrical controls for household and similar use - Part 2-15: Particular requirements for automatic electrical air flow, water flow and water level sensing controls, 08/14/2015
80/764/FDIS, IEC 61162-460 Ed.1: Maritime navigation and radionavigation equipment and systems - Digital interfaces - Part 460: Multiple talker and multiple listeners - Ethernet interconnection - Safety and security, 07/24/2015
82/980/DC, Proposed revision of IEC 62817 Ed.1, Photovoltaic systems - Design qualification of solar trackers, 07/03/2015

Ordering Instructions

ISO and IEC Drafts can be made available by contacting ANSI’s Customer Service department. Please e-mail your request for an ISO or IEC Draft to Customer Service at sales@ansi.org. When making your request, please provide the date of the Standards Action issue in which the draft document you are requesting appears.
Newly Published ISO & IEC Standards

Listed here are new and revised standards recently approved and promulgated by ISO - the International Organization for Standardization – and IEC – the International Electrotechnical Commission. Most are available at the ANSI Electronic Standards Store (ESS) at www.ansi.org. All paper copies are available from Standards resellers (http://webstore.ansi.org/faq.aspx#resellers).
SAFETY OF MACHINERY (TC 199)
ISO/TR 22100-1:2015, Safety of machinery - Relationship with ISO 12100 - Part 1: How ISO 12100 relates to type-B and type-C standards, $123.00

ISO Technical Specifications

NANOTECHNOLOGIES (TC 229)
IEC/TS 62607-2-1:2015, Nanomanufacturing - Key control characteristics for CNT film applications - Resistivity, $88.00

TRANSPORT INFORMATION AND CONTROL SYSTEMS (TC 204)
ISO/TS 18750:2015, Intelligent transport systems - Cooperative systems - Definition of a global concept for Local Dynamic Maps, $240.00

ISO/IEC JTC 1, Information Technology

ISO/IEC 17549-2-2015, Information technology - User interface guidelines on menu navigation - Part 2: Navigation with 4-direction devices, $123.00
ISO/IEC 29167-10:2015, Information technology - Automatic identification and data capture techniques - Part 10: Crypto suite AES-128 security services for air interface communications, $149.00
ISO/IEC 29167-10:2015, Information technology - Automatic identification and data capture techniques - Part 12: Crypto suite ECC-DH security services for air interface communications, $200.00
ISO/IEC 29167-12-2015, Information technology - Automatic identification and data capture techniques - Part 12: Crypto suite Grain-128A security services for air interface communications, $200.00
ISO/IEC/IEEE 15288-2015, Systems and software engineering - System life cycle processes, $265.00
ISO/IEC/IEEE 15289-2015, Systems and software engineering - Content of life-cycle information items (documentation), $265.00
ISO/IEC/IEEE 23026-2015, Systems and software engineering - Engineering and management of websites for systems, software, and services information, $200.00
ISO/IEC/IEEE 26531-2015, Systems and software engineering - Content management for product life-cycle, user and service management documentation, $200.00

IEC Standards

DOCUMENTATION AND GRAPHICAL SYMBOLS (TC 3)
IEC 61175-1 Ed. 1.0 b:2015, Industrial systems, installations and equipment and industrial products - Designation of signals - Part 1: Basic rules, $303.00

IEC Standards

ELECTRICAL APPARATUS FOR EXPLOSIVE ATMOSPHERES (TC 31)
IEC 60079-18 Ed. 4.0 en:2014, Explosive atmospheres - Part 18: Equipment protection by encapsulation "m", $290.00

ELECTROSTATICS (TC 101)
IEC 61340-4-6 Ed. 2.0 b:2015, Electrostatics - Part 4-6: Standard test methods for specific applications - Wrist straps, $121.00

EQUIPMENT FOR ELECTRICAL ENERGY MEASUREMENT AND LOAD CONTROL (TC 13)
IEC 62056-4-7 Ed. 1.0 b:2015, Electricity metering data exchange - The DLMS/COSEM suite - Part 4-7: DLMS/COSEM transport layer for IP networks, $254.00

INDUSTRIAL-PROCESS MEASUREMENT AND CONTROL (TC 65)
IEC 62439-7 Ed. 1.0 b cor 1:2015, Corrigendum 1 - Industrial communication networks - High availability automation networks - Part 7: Ring-based Redundancy Protocol (RRP), $0.00
IEC 62769-3 Ed. 1.0 b:2015, Field Device Integration (FDI) - Part 3: FDI Server, $339.00
IEC 62769-5 Ed. 1.0 b:2015, Field Device Integration (FDI) - Part 5: FDI Information Model, $303.00
IEC 62769-101-1 Ed. 1.0 b:2015, Field device integration (FDI) - Part 101-1: Profiles - Foundation Fieldbus H1, $230.00
IEC 62769-101-2 Ed. 1.0 b:2015, Field Device Integration (FDI) - Part 101-2: Profiles - Foundation Fieldbus HSE, $206.00
IEC 62769-109-1 Ed. 1.0 b:2015, Field Devices Integration (FDI) - Part 109-1: Profiles - HART® and WirelessHART®, $278.00

NUCLEAR INSTRUMENTATION (TC 45)
IEC 62808 Ed. 1.0 b:2015, Nuclear power plants - Instrumentation and control systems important to safety - Design and qualification of isolation devices, $97.00

SAFETY OF HAND-HELD MOTOR-OPERATED ELECTRIC TOOLS (TC 116)
IEC 62841-3-6 Ed. 1.0 b cor 1:2015, Corrigendum 1 - Electric motor-operated hand-held tools, transportable tools and lawn and garden machinery - Safety - Part 3-6: Particular requirements for transportable diamond drills with liquid system, $0.00

SAFETY OF HOUSEHOLD AND SIMILAR ELECTRICAL APPLIANCES (TC 61)
IEC 60335-2-27 Amd 2 Ed. 5.0 en cor.1:2015, Corrigendum 1 - Amendment 2 - Household and similar electrical appliances - Safety - Part 2-27: Particular requirements for appliances for skin exposure to optical radiation, $0.00

SUPERCONDUCTIVITY (TC 90)
IEC 61786-21 Ed. 1.0 b:2015, Superconductivity - Part 21: Superconducting wires - Test methods for practical superconducting wires - General characteristics and guidance, $61.00

SURFACE MOUNTING TECHNOLOGY (TC 91)
IEC 61760-4 Ed. 1.0 b:2015, Surface mounting technology - Part 4: Classification, packaging, labelling and handling of moisture sensitive devices, $230.00
IEC 62878-1-1 Ed. 1.0 b:2015, Device embedded substrate - Part 1-1: Generic specification - Test methods, $303.00

WINDING WIRES (TC 55)
IEC 60851-2 Ed. 3.1 b:2015, Winding wires - Test methods - Part 2: Determination of dimensions, $91.00
IEC 60851-2 Amd.1 Ed. 3.0 b:2015, Amendment 1 - Winding wires - Test methods - Part 2: Determination of dimensions, $22.00

IEC Technical Reports

DOCUMENTATION AND GRAPHICAL SYMBOLS (TC 3)
IEC/TR 62964 Ed. 1.0 en:2015, Graphical symbols for use on equipment - Graphical symbols for multimedia equipment - Current practice, $73.00

INDUSTRIAL-PROCESS MEASUREMENT AND CONTROL (TC 65)
IEC/TR 61832 Ed. 2.0 en:2015, Design and installation of on-line analyser systems - Guide to technical enquiry and bid evaluation, $182.00

IEC Technical Specifications

POWER SYSTEM CONTROL AND ASSOCIATED COMMUNICATIONS (TC 57)
IEC/TS 62325-504 Ed. 1.0 en:2015, Framework for energy market communications - Part 504: Utilization of web services for electronic data interchanges on the European energy market for electricity, $278.00

SAFETY OF MACHINERY - ELECTROTECHNICAL ASPECTS (TC 44)
IEC/TS 61496-4-3 Ed. 1.0 en:2015, Safety of machinery - Electro-sensitive protective equipment - Part 4-3: Particular requirements for equipment using vision based protective devices (VBPD) - Additional requirements when using stereo vision techniques (VBPDST), $339.00
Proposed Foreign Government Regulations

Call for Comment

U.S. manufacturers, exporters, regulatory agencies and standards developing organizations may be interested in proposed foreign technical regulations issued by Member countries of the World Trade Organization (WTO). In accordance with the WTO Agreement on Technical Barriers to Trade (TBT Agreement), Members are required to report proposed technical regulations that may significantly affect trade to the WTO Secretariat in Geneva, Switzerland. In turn, the Secretariat disseminates the information to all WTO Members. The purpose of this requirement is to provide global trading partners with an opportunity to review and comment on the regulations before they become final.

The National Center for Standards and Certification Information (NCSCI) at the National Institute of Standards and Technology (NIST), distributes these proposed foreign technical regulations to U.S. stakeholders via an online service, Notify U.S. Notify U.S. is an e-mail and Web service that allows interested U.S. parties to register, obtain notifications, and read full texts of regulations from countries and for industry sectors of interest to them. To register for Notify U.S., please go to Internet URL: http://www.nist.gov/notifyus/ and click on “Subscribe”.

NCSCI is the WTO TBT Inquiry Point for the U.S. and receives all notifications and full texts of regulations to disseminate to U.S. Industry. For further information, please contact: NCSCI, NIST, 100 Bureau Drive, Gaithersburg, MD 20899-2160; Telephone: (301) 975-4040; Fax: (301) 926-1559; E-mail: ncsci@nist.gov or notifyus@nist.gov.
American National Standards

INCITS Executive Board

ANSI Accredited SDO and US TAG to ISO/IEC JTC 1, Information Technology

The InterNational Committee for Information Technology Standards (INCITS), an ANSI accredited SDO, is the forum of choice for information technology developers, producers and users for the creation and maintenance of formal de jure IT standards. INCITS’ mission is to promote the effective use of Information and Communication Technology through standardization in a way that balances the interests of all stakeholders and increases the global competitiveness of the member organizations.

The INCITS Executive Board serves as the consensus body with its oversight of programs of its 40+ Technical Committees. Additionally, the INCITS Executive Board exercises international leadership in its role as the US Technical Advisory Group (TAG) to ISO/IEC JTC 1, Information Technology.

The INCITS Executive Board has eleven membership categories that can be viewed at http://www.incits.org/participation/membership-info. Membership in all categories is always welcome. INCITS also seeks to broaden its membership base and looks to recruit new participants in the following under-represented membership categories:

- **Producer – Hardware**
  This category primarily produces hardware products for the ITC marketplace.

- **Producer – Software**
  This category primarily produces software products for the ITC marketplace.

- **Distributor**
  This category is for distributors, resellers or retailers of conformant products in the ITC industry.

- **User**
  This category includes entities that primarily reply on standards in the use of a products/service, as opposed to producing or distributing conformant products/services.

- **Consultants**
  This category is for organizations whose principal activity is in providing consulting services to other organizations.

- **Standards Development Organizations and Consortia**
  - “Minor” an SDO or Consortium that (a) holds no TAG assignments; or (b) holds no SC TAG assignments, but does hold one or more Work Group (WG) or other subsidiary TAG assignments.
  - **Academic Institution**
    This category is for organizations that include educational institutions, higher education schools or research programs.

- **Other**
  This category includes all organizations who do not meet the criteria defined in one of the other interest categories.

Membership in the INCITS Executive Board is open to all directly and materially affected parties in accordance with INCITS membership rules. To find out more about participating on the INCITS Executive Board, please contact Jennifer Garner at 202-626-5737 or jgarner@itic.org. Visit www.INCITS.org for more information regarding INCITS activities.

Calls for Members

Society of Cable Telecommunications

ANSI Accredited Standards Developer

SCTE, an ANSI-accredited SDO, is the primary organization for the creation and maintenance of standards for the cable telecommunications industry. SCTE’s standards mission is to develop standards that meet the needs of cable system operators, content providers, network and customer premises equipment manufacturers, and all others who have an interest in the industry through a fair, balanced and transparent process.

SCTE is currently seeking to broaden the membership base of its ANSI consensus bodies and is interested in new members in all membership categories to participate in new work in fiber-optic networks, advanced advertising, 3D television, and other important topics. Of particular interest is membership from the content (program and advertising) provider and user communities.

Membership in the SCTE Standards Program is open to all directly and materially affected parties as defined in SCTE’s membership rules and operating procedures. More information is available at www.scte.org or by e-mail from standards@scte.org.

ANSI Accredited Standards Developers

Approvals of Accreditation as an ANSI ASD

APPA – Leadership in Educational Facilities

ANSI’s Executive Standards Council has approved APPA – Leadership in Educational Facilities, a new ANSI Organizational Member in 2014, as an ANSI Accredited Standards Developer (ASD) under its proposed operating procedures for documenting consensus on APPA-sponsored American National Standards, effective May 20, 2015. For additional information, please contact: Mr. John Bernhards, Associate Vice-President, APPA – Leadership in Educational Facilities, 1643 Prince Street, Alexandria, VA 22153; phone: 703.542.3848; e-mail: jbernhards@appa.org.

Portable Lights American Trade Organization (PLATO)

ANSI’s Executive Standards Council has approved the Portable Lights American Trade Organization (PLATO), a new ANSI Organizational Member in 2015, as an ANSI Accredited Standards Developer (ASD) under its proposed operating procedures for documenting consensus on PLATO-sponsored American National Standards, effective May 27, 2015. For additional information, please contact: Mr. Daniel Durbin, Portable Lights American Trade Organization, P.O. Box 107, Mablehead, MA 01945; phone: 440.835.7661; e-mail: DanielR.Durbin@energizer.com.
Approval of Reaccreditation
Associated Air Balance Council (AABC)
ANSI’s Executive Standards Council has approved the reaccreditation of the Associated Air Balance Council (AABC), an ANSI Organizational Member and Accredited Standards Developer, under its recently revised operating procedures for documenting consensus on AABC-sponsored American National Standards, effective May 27, 2015. For additional information, please contact: Mr. Ray Bert, Director of Communications, Associated Air Balance Council, 1518 K Street, NW, Suite 503, Washington, DC 20005; phone: 202.737.0202; e-mail: ray@aabc.com.

International Organization for Standardization (ISO)
New Field of ISO Technical Activity
Rare Earth
Comment Deadline: July 10, 2015
SAC (China) has submitted to ISO a proposal for a new field of ISO technical activity on the subject of Rare Earth, with the following scope statement:
Standardization in the field of rare earth ores, concentrates, metals, alloys, compounds, materials, including the reuse and recycling of waste rare earth products.
Anyone wishing to review this new proposal can request a copy by contacting ANSI’s ISO Team via e-mail: isot@ansi.org with submission of comments to Steve Cornish (scornish@ansi.org) by close of business on Friday, July 10, 2015.

Meeting Notices
AHRI Meetings
Revision of AHRI Standard 410 – Forced-Circulation Air-Cooling and Air-Heating Coils
The Air-Conditioning, Heating, and Refrigeration Institute (AHRI) will be holding an online meeting every Wednesday from 12 p.m. to 1 p.m. between April 29 and August 26. If you are interested in participating in the meeting or providing comments on the standard, please contact AHRI staff member Mary Opalka at mopalka@ahrinet.org.

Revision of AHRI Standards 430 (I-P) and 431 (SI) – Performance Rating of Central Station Air-handling Unit Supply Fans
The Air-Conditioning, Heating, and Refrigeration Institute (AHRI) will be holding an online meeting on a bi-weekly basis on Thursdays from 2 p.m. to 4 p.m. – April 30, May 14, May 28, June 11, June 25, July 9, July 23, August 6, and August 20. If you are interested in participating in the meeting or providing comments on the standards, please contact AHRI staff member Mary Opalka at mopalka@ahrinet.org.

Revision of AHRI Standard 1160, Performance Rating of Heat Pump Pool Heaters
The Air-Conditioning, Heating, and Refrigeration Institute (AHRI) will be holding an online meeting on June 8 from 2 p.m. to 3 p.m. If you are interested in participating in the meeting or providing comments on the standard, please contact AHRI staff member Mary Opalka at mopalka@ahrinet.org.

International Organization for Standardization (ISO)

Call for International (ISO) Secretariat

ISO TC 39/SC 2 – Test conditions for metal cutting machine tools

Currently, the U.S. holds a leadership position as secretariat of ISO/TC 39/SC 2 (Test conditions for metal cutting machine tools). ANSI has delegated the responsibility for the administration of the secretariat for ISO/TC 39/SC 2 to NIST. NIST has advised ANSI of its intent to relinquish its role as delegated secretariat for this committee.

ISO/TC 39/SC 2 operates under the following scope:

*Standardization of all machine tools for the working of metal, wood and plastics, operating by removal of material or by pressure.*

ANSI is seeking organizations in the U.S. that may be interested in assuming the role of delegated secretariat for ISO/TC 39/SC 2. Alternatively, ANSI may be assigned the responsibility for administering an ISO secretariat. Any request that ANSI accepts to direct administration of an ISO secretariat shall demonstrate that:

1) The affected interests have made a financial commitment for not less than three years covering all defined costs incurred by ANSI associated with holding the secretariat;
2) The affected technical sector, organizations or companies desiring that the U.S. hold the secretariat request that ANSI perform this function;
3) The relevant US TAG has been consulted with regard to ANSI’s potential role as secretariat; and
4) ANSI is able to fulfill the requirements of a secretariat.

If no U.S. organization steps forward to assume the ISO/TC 39/SC 2 secretariat, or if there is insufficient support for ANSI to assume direct administration of this activity, then ANSI will inform the ISO Central Secretariat that the U.S. will relinquish its leadership of the committee. This will allow ISO to solicit offers from other countries interested in assuming the secretariat role.

Information concerning the United States retaining the role of international secretariat may be obtained by contacting ANSI at isot@ansi.org.

International Organization for Standardization (ISO)

Call for International (ISO) Secretariat

ISO TC 108/SC 5 – Condition monitoring and diagnostics of machine systems

Currently, the U.S. holds a leadership position as secretariat of ISO/TC 108/SC 5 (Condition monitoring and diagnostics of machine systems). ANSI has delegated the responsibility for the administration of the secretariat for ISO/TC 108/SC 5 to the Acoustical Society of America (ASA). ASA has advised ANSI of its intent to relinquish its role as delegated secretariat for this committee.

ISO/TC 108/SC 5 operates under the following scope:

*Standardization of the procedures, processes and equipment requirements uniquely related to the technical activity of condition monitoring and diagnostics of machines systems in which selected physical parameters associated with an operating machine system are periodically or continuously sensed, measured and recorded for the interim purpose of reducing, analyzing, comparing and displaying the data and information so obtained and for the ultimate purpose of using this interim result to support decisions related to the operation and maintenance of the machine system.*

ANSI is seeking organizations in the U.S. that may be interested in assuming the role of delegated secretariat for ISO/TC 108/SC 5. Alternatively, ANSI may be assigned the responsibility for administering an ISO secretariat. Any request that ANSI accepts to direct administration of an ISO secretariat shall demonstrate that:

1) The affected interests have made a financial commitment for not less than three years covering all defined costs incurred by ANSI associated with holding the secretariat;
2) The affected technical sector, organizations or companies desiring that the U.S. hold the secretariat request that ANSI perform this function;
3) The relevant US TAG has been consulted with regard to ANSI’s potential role as secretariat; and
4) ANSI is able to fulfill the requirements of a secretariat.

If no U.S. organization steps forward to assume the ISO/TC 108/SC 5 secretariat, or if there is insufficient support for ANSI to assume direct administration of this activity, then ANSI will inform the ISO Central Secretariat that the U.S. will relinquish its leadership of the committee. This will allow ISO to solicit offers from other countries interested in assuming the secretariat role.

Information concerning the United States retaining the role of international secretariat may be obtained by contacting ANSI at isot@ansi.org

ANSI Accreditation Program for Greenhouse Gas Validation/Verification Bodies

DNV GL

Comment Deadline: June 29, 2015

DNV GL
Dave Knight
1400 Ravello Dr.
Katy, TX 77449
Phone: 281-396-1000
Email: dave.knight@dnvgl.com

On May 19, 2015, the ANSI Accreditation Program for Greenhouse Gas Validation/Verification Bodies accepted a request from DNV GL to voluntarily withdraw its accreditation for the following:

Standards:
ISO 14065: Greenhouse gases - Requirements for greenhouse gas validation and verification bodies for use in accreditation or other forms of recognition

Scopes:
Verification of assertions related to GHG emissions and removals at the organizational level
01. General
02. Manufacturing
03. Power Generation
05. Mining and Mineral Production
07. Chemical Production
08. Oil and gas extraction, production and refining including petrochemicals
09. Waste

Verification of assertions related to GHG emission reductions & removals at the project level
01. GHG emission reductions from fuel combustion
02. GHG emission reductions from industrial processes (non-combustion, chemical reaction, fugitive and other)
03. Land Use and Forestry
05. Livestock
06. Waste Handling and Disposal

Validation of assertions related to GHG emission reductions & removals at the project level
03. Land Use and Forestry
05. Livestock
06. Waste Handling and Disposal

Please send your comments by June 29, 2015 to Ann Bowles, Director, Environmental Accreditation Programs, American National Standards Institute, 1899 L Street, NW, 11th Floor, Washington, DC 20036, Fax: 202-293-9287 or e-mail: abowles@ansi.org.
ARCSA/ASPE 78: Stormwater Harvesting System Design for Direct End-Use Applications

Second Public Review Draft

The following substantive changes to ARCSA/ASPE 78 were made based on the first round of public comment and ASPE Main Design Standards Committee review. Only those changes noted in redline are available for review at this time. The other text is provided for context purposes only.
Introduction and Background
(Normative)

Passive or Indirect Harvesting

Indirect or passive applications generally include the harvesting of stormwater for use in a landscape. This strategy is called low-impact development (LID) or green infrastructure (GI). Unlike single-purpose gray stormwater infrastructure, which uses pipes to dispose of rainwater, green infrastructure uses vegetation and soil to manage rain where it falls, such as infiltration or soakaway pits, rain gardens, and other bioretention structures. By weaving natural processes into the built environment, green infrastructure provides not only stormwater management, but also flood mitigation, air quality management, and water supply.

Some definitions of green infrastructure include structural harvesting strategies, such as barrels and cisterns; however, this latter strategy generally falls under low-impact development (LID), which is an approach to land development (or redevelopment) that works with nature to manage stormwater as close to its source as possible. LID employs principles such as preserving and recreating natural landscape features, minimizing effective imperviousness, to create functional and appealing site drainage that treats stormwater as a resource rather than a waste product. Many practices have been used to adhere to these principles such as bioretention facilities (infiltration or soakaway pits), rain gardens, vegetated rooftops, rain barrels, and permeable pavements. It is similar to green infrastructure, although LID includes barrels and cisterns.

The Standard
(Normative)

1.1 Performance Objectives
The objectives of this Standard are to provide guidance on how to provide and maintain a safe alternative to utility-provided water and to optimize stormwater utilization while ensuring:

d. Reduction of the use of or need for municipal or private potable water systems.

2.0 REFERENCED STANDARDS

2.1 American Society of Mechanical Engineers (ASME)

2.3 ASSE International

2.3.1 ASSE 1013-2011: Performance Requirements for Reduced Pressure Principle Backflow Preventers and Reduced Pressure Principle Fire Protection Backflow Preventers

2.5 American Water Works Association (AWWA)

2.5.3 AWWA D103-09 Factory-Coated Bolted Carbon Steel Tanks for Water Storage

2.5.4 AWWA D120-09 Thermosetting Fiberglass-Reinforced Plastic Tanks

2.5.5 AWWA D121-12 Bolted Aboveground Thermosetting Fiberglass-Reinforced Plastic Panel-Type Tanks for Water Storage

2.7 International Association of Plumbing and Mechanical Officials (IAPMO)

2.7.1 IAPMO/ANSI Z1002-2014: Rainwater Harvesting Tanks

2.10 Steel Tank Institute

2.10.1 STI F894: ACT-100® Specification for External Corrosion Protection of FRP Composite Steel USTs

2.10.2 STI F921: Standard for Aboveground Tanks with Integral Secondary Containment

2.10.3 STI F922: Specification for Permatank

2.10.4 STI F961: ACT-100U: Specification for External Corrosion Protection of Composite Steel Underground Storage Tanks

2.11 Underwriters Laboratories (UL)

2.11.1 UL 778: Motor-Operated Water Pumps

3.0 DEFINITIONS

3.17 GREEN INFRASTRUCTURE: A passive stormwater management method that uses vegetation and soil such as infiltration or soaking pits, rain gardens, and other bioretention structures to manage rain. (For more information, see the Introduction and Background section.) Approaches that communities can choose to maintain healthy waters, provide multiple environmental benefits, and support sustainable communities. Unlike single-purpose gray stormwater infrastructure, which uses pipes to dispose of rainwater, green infrastructure uses vegetation and soil to manage rain where it falls, such as infiltration or soakaway pits, rain gardens, and other bioretention structures. By weaving natural processes into the built environment, green infrastructure provides not only stormwater management, but also flood mitigation, air quality management, and water supply. Some definitions include structural harvesting strategies, such as barrels and cisterns; however, this latter strategy generally falls under low-impact development (LID).

3.21 INFILTRATION PIT: An excavated, hollowed out surface (trench) or subsurface (pit) space of in situ material, a pit (subsurface) or trench (surface) filled with rock, or a prefabricated plastic, concrete, or metal vault system, used to reduce the amount of runoff from surfaces by storing the water and allowing it to soak into the ground. A pit or trench used to reduce the amount of runoff from a property by storing water underground and allowing it to soak
4.5.2 Potable water pumps shall be certified to the requirements of NSF/ANSI 61 by an ANSI-accredited certification organization.

4.6 Post-Cistern Treatment: Treatment shall meet the following provisions:

4.6.2 Where stormwater is used for indoor purposes, such as for laundry, toilet and urinal flushing, cooling and process, and outdoor purposes such as spray irrigation and washdown, the water shall be treated as a safeguard against sediment or discoloration, filtered for the proper operation of valves or other devices, and disinfected according to the standards of the local public health or authority having jurisdiction. (Note: If no such standards exist, some references, including NSF 350, are found in Appendix C.)

4.7 Piping

4.7.2 There shall be no direct connection of any stormwater harvesting pipe system and a public utility-provided domestic potable water pipe system without an approved backflow device, such as a reduced pressure principle backflow prevention assembly (RP) and the related reduced pressure principle

into the soil. The size and holding capacity are determined by the area draining to the pit and the permeability of the underlying soil. Also called soakaway pit, infiltration chamber, or infiltration gallery.

3.23 LOW IMPACT DEVELOPMENT: A stormwater management method that preserves or recreates natural landscape features by minimizing imperviousness and creating functional site drainage for resourceful applications. Similar to green infrastructure, except LID includes barrels and cisterns. (For more information, see the Introduction and Background section.) An approach to land development (or redevelopment) that works with nature to manage stormwater as close to its source as possible. LID employs principles such as preserving and recreating natural landscape features, minimizing effective imperviousness, to create functional and appealing site drainage that treats stormwater as a resource rather than a waste product. Many practices have been used to adhere to these principles such as bioretention facilities (infiltration or soakaway pits), rain gardens, vegetated rooftops, rain barrels, and permeable pavements. It is similar to green infrastructure, although LID includes barrels and cisterns.

3.45 SPRINKLER IRRIGATION: Method of irrigation in which the water is sprayed or sprinkled through the air to the ground surface.

3.46 STORMWATER: Natural precipitation that has contacted a surface at or below grade, or an above grade parking structure, and has not been put to beneficial use. Natural precipitation that has contacted an impermeable surface at, below (e.g., channels, storm drain pipes), or above (e.g., elevated roadways) grade.

3.51 SURFACE IRRIGATION: Broad class of irrigation methods in which water is distributed over the soil surface by gravity flow. Water that is applied above ground level and is directly exposed to the aboveground surface and/or air.

4.0 DESIGN AND INSTALLATION REQUIREMENTS

4.1 Collection Parameters

4.1.2 Nonpotable Water Applications

4.1.2.1 The collection surface shall be constructed of above-, at- or below-grade, hard surface, impervious and pervious materials.

4.1.2.3 Collection of stormwater from any surface above, at, or below grade is permitted.

4.3 Pretreatment

4.3.3 Pretreatment shall be provided with a debris screen or equivalent device that protects the cistern from the intrusion of debris, insects, vermin, or other organisms that can be a potential danger if allowed to enter the cistern and that prevents and minimizes clogging.

4.4 Cistern / Storage Tank: Following are the minimum requirements for cisterns. Additional requirements are provided in Section 4.9 for potable water applications.

4.4.2 Installation

4.4.2.8 In addition to the manufacturer’s installation instructions,

e. All water storage tanks requiring field erection must be built/installed by trained personnel.

4.4.2.12 Where an opening is provided in a cistern that could allow the entry of personnel, the opening shall be appropriately marked “Danger – Confined Space” or locked.

4.4.3 Inlets, Outlets, and Openings

4.4.3.2 If the overflow outlet, flap valve, or vent is open to the atmosphere, it shall be protected with a screen having openings no greater than 0.3 cm (0.125 in.), or as otherwise appropriate, for preventing the entrance of insects or vermin into the cistern.

4.4.3.2.1 The overflow outlet shall be sized in accordance to accommodate the flow of the stormwater entering the tank and not less than the cross-sectional area of all inflow pipes with standard engineering practices.

4.5 Pump: Where a pump is provided in conjunction with the stormwater harvesting system, the pump shall meet the following provisions:

4.5.2 Potable water pumps shall be certified to the requirements of NSF/ANSI 61 by an ANSI-accredited certification organization.

4.6 Post-Cistern Treatment: Treatment shall meet the following provisions:

4.6.2 Where stormwater is used for indoor purposes, such as for laundry, toilet and urinal flushing, cooling and process, and outdoor purposes such as spray irrigation and washdown, the water shall be treated as a safeguard against sediment or discoloration, filtered for the proper operation of valves or other devices, and disinfected according to the standards of the local public health or authority having jurisdiction. (Note: If no such standards exist, some references, including NSF 350, are found in Appendix C.)

4.7 Piping

4.7.2 There shall be no direct connection of any stormwater harvesting pipe system and a public utility-provided domestic potable water pipe system without an approved backflow device, such as a reduced pressure principle backflow prevention assembly (RP) and the related reduced pressure principle

...
4.9 Potable Water Applications

4.9.1 Collection surfaces for potable water applications shall be made of nontoxic material and meet the requirements noted in Section 4.1.1. The following items and activities shall not be allowed in the stormwater collection area for potable water applications: cars, domicastected animals, garbage containers, use of pesticides or herbicides, storage of paint, solvents, or other hazardous materials, or other items or activities that would have a reasonable potential to release contaminants into the stormwater.

4.9.2 Painted surfaces are only acceptable if the paint has been certified by an ANSI-accredited certification organization for the applicable use to NSF P151 or NSF/ANSI 61 to ensure that the toxicity level of the paint is acceptable for drinking water contact. Lead-, chromium-, or zinc-based paints are not permitted.

4.9.3 Flat roof products shall be certified by an ANSI-accredited certification organization listed for the applicable use to NSF P151.

4.9.4 Cisterns (Untreated Water)

4.9.4.1 Cistern outlets shall be provided with a floating inlet to draw water from the cistern just below the water surface, or the outlet shall be located at least 10 cm (4 in.) above the bottom of the cistern. Alternatives to floating inlets, for larger flow rates, are allowed providing they meet the 10 cm (4 in.) distance criteria above the cistern bottom. Alternatives for larger flow rates to floating inlets are allowed as long as they meet 10 cm (4 in.) above the cistern bottom.

4.9.4.2 Cisterns shall be certified by an ANSI-accredited certification organization listed for the applicable use to NSF/ANSI 61. Plastic tanks shall be certified by an ANSI-accredited certification organization adhere to the requirements of NSF/ANSI 61 and be constructed of virgin plastic.

4.9.4.3 Cisterns shall not be connected directly to a public water system without approved backflow protection. The public water system provider, inspector, or approving agency shall be contacted prior to making any such connection.

4.9.5 Filtration for Pathogen Removal

4.9.5.1 Equipment shall be certified by an ANSI-accredited certification organization for at least 2-log (99%) removal of Cryptosporidium oocysts under NSF/ANSI 53 or another pathogen removal standard acceptable to the authority having jurisdiction.

4.9.6 Filtration – Granular Activated Carbon

4.9.6.1 Carbon filtration shall be certified by an ANSI-accredited certification organization under NSF/ANSI 42 or another standard acceptable to the authority having jurisdiction for the intended end use.

4.9.7 Water Disinfection: The drinking water disinfection equipment shall be designed to provide at least 1-log (90%) inactivation of Giardia lamblia cysts and 4-log (99.99%) inactivation of viruses. The design may include a single disinfectant or multiple disinfectants as follows:

4.9.7.1 Chlorination (Hypochlorite) Only

4.9.7.1.1 Shall be designed to provide a contact time of at least 60 minutes with a treated water free chlorine residual of 1.0 mg/L.

4.9.7.3 Ultraviolet (UV) Disinfection Only
4.9.7.3.5 UV reactors shall be equipped with a UV intensity sensor and an audible alarm or automatic shutdown of the reactor if the UV intensity drops below the manufacturer designated setpoint.

4.9.7.4 Chlorination (Hypochlorite) Combined with Ultraviolet (UV) Disinfection

4.9.7.4.5 UV reactors shall be equipped with a UV intensity sensor and an audible alarm or automatic shutdown of the reactor if the UV intensity drops below the manufacturer designated setpoint.

4.9.8 Corrosion Control: Natural precipitation is slightly acidic (pH 4.8 to 5.8 is common in the United States) and low in dissolved minerals, which makes it aggressive to most plumbing components.

4.9.8.1 A calcite contactor, or other means of pH and alkalinity adjustment, shall be installed if required by the authority having jurisdiction.

4.10 Operation and Water Quality Maintenance (Potable Systems)

4.10.3 Water Quality Maintenance

4.10.3.1 The quality of the water shall be analyzed using EPA-approved methods as outlined in Table 4.2.

Appendix C: Examples of Water Quality Guidelines and Labeling

The following references describe water quality standards for the nonpotable use of rainwater. The designer should check with the authority having jurisdiction to determine the appropriate end-use water quality standards before starting project design. In the event the AHJ doesn’t publish guidelines, the intent of providing the following local and state guidelines is to provide a basis for discussions between the designer and AHJ to agree upon water quality standards for the proposed project.
BSR/UL 676, Standard for Safety for Underwater Luminaires and Submersible Junction Boxes

5. Marking of isolated low voltage luminaires

40.13 A luminaire rated in accordance with 8.4.1 shall be marked “For supply connection, use only an isolating low voltage power supply with ungrounded output, evaluated for swimming pool use.” This marking shall be visible during installation; a cord tag or removable label is permitted.

6. Submersible luminaires

44.1 A submersible luminaire shall be provided with a permanently attached length of flexible cord in accordance with 7.3. Low voltage luminaires are permitted to use hard usage cords not smaller than 0.82 mm² (18 AWG) 0.20 mm² (24 AWG).

44.3 A flexible cord supplied as part of a submersible luminaire shall not be provided with an attachment plug or receptacle.
BSR/UL 844, Standard for Safety for *Luminaires for Use in Hazardous (Classified) Locations*

1. Revisions to add new paragraph 37.5

**PROPOSAL**

37.5 Prior to the test of SA5.3, diffusers, globes, refractors, lenses and similar optics that are made from polymeric material shall be permitted to be subjected to short term-aging using the formula found in SA5.3 when all of the following applies:

a) The polymeric material which forms the optic portion must be a UL Recognized material with an established RTI value, and used within this rating;

b) The polymeric material which forms the optic portion forms a part of a gasketed metal to polymeric joint;

c) The joint is not intended to be a serviceable joint;

d) Air temperature is conducted measuring the lens internal service temperature, in addition to all gasket internal service temperatures; and

e) The maximum internal service temperature is used in the aging formula in SA5.3.
BSR/UL 1238, Standard for Safety for Control Equipment for Use with Flammable Liquid Dispensing Devices

1. User replaceable fuse marking

PROPOSAL

47.3.1 There shall be a replacement marking adjacent to a user replaceable fuse or fuseholder. The marking shall be located where it will be readily visible during replacement of the fuse, and shall consist of the word "CAUTION" and the following or equivalent: "For Continued Protection Against Risk Of Fire, Replace Only With Same Type __ A, __ V fuse." The blanks shall have the applicable current and voltage ratings.

2. Update and clarification of Flammability Test

PROPOSAL

39.3.4 The test flame is to be obtained by means of a Bunsen or Tirril burner having a nominal bore of 3/8 inch (9.5 mm) and a length of 4 inches (102 mm) above the primary air inlets. A gas supply of 1000 BTU per cubic foot (37 MJ/m\(^3\)) at normal pressure is to be used and the flame adjusted so that, while the burner is vertical, the overall height of flame is 3/4 inch (19.1 mm). The flame shall be yellow in appearance with no appreciable inner blue cone. A laboratory type burner having a tube with a length of 100 ±10 mm (3.94 ±0.39 inch) and an inside diameter of 9.5 ±0.3 mm (0.374 ±0.012 inch) is to be used. The barrel is not to be equipped with an end attachment, such as a stabilizer. The burner shall be in compliance with Specification for a Laboratory Burner Used for Small-Scale Burning Tests on Plastic Materials, ASTM D5025. Adjust the burner to produce a blue flame 20 ±1 mm high (3/4 inch nominal). The flame is obtained by adjusting the gas supply and air ports of the burner until a 20 ±1 mm (3/4 inch nominal) yellow-tipped blue flame is produced. Increase the air supply until the yellow tip just disappears. Measure the height of the flame again and readjust it if necessary. The test flame shall be calibrated in accordance with Standard Practice for Calibration of 20 mm and 125 mm Test Flames for Small-Scale Burning Tests on Plastic Materials, ASTM D5207, at least once a month and when the gas supply is changed, test equipment is replaced, or when data is questioned.

3. Update references to motor standards

PROPOSAL

17.1 Each motor shall be evaluated for use in its intended environment and shall be capable of driving its "maximum normal load" during operation of the equipment without introducing hazardous conditions. A motor intended for use in a Division 1 Classified area shall comply with the requirements in the Standard for Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations, UL 674. Motors for use in unclassified areas shall comply with the Standard for Electric Motors, UL 1004 Standard for Rotating Electrical Machines - General Requirements, UL 1004-1.
17.5 The overcurrent (overload) protection required in 17.3 is to consist of one of the following:

a) Thermal protection complying with either the Standard for Overheating Protection for Motors, UL 2111, or the Standard for Thermally Protected Motors, UL 1004-3;

b) Impedance protection complying with the requirements for motor-operated equipment when tested as used in the application; and

c) Other protection that tests show is equivalent to the protection mentioned in (a).
