This section solicits public comments on proposed draft new American National Standards, including the national adoption of ISO and IEC standards as American National Standards, and on proposals to revise, reaffirm or withdraw approval of existing American National Standards. A draft standard is listed in this section under the ANSI-accredited standards developer (ASD) that sponsors it and from whom a copy may be obtained. Comments in connection with a draft American National Standard must be submitted in writing to the ASD no later than the last day of the comment period specified herein. Such comments shall be specific to the section(s) of the standard under review and include sufficient detail so as to enable the reader to understand the commenter’s position, concerns and suggested alternative language, if appropriate. Please note that the ANSI Executive Standards Council (ExSC) has determined that an ASD has the right to require that interested parties submit public review comments electronically, in accordance with the developer’s procedures.

Ordering Instructions for “Call-for-Comment” Listings
1. Order from the organization indicated for the specific proposal.
2. Use the full identification in your order, including the BSR prefix; for example, Electric Fuses BSR/SAE J554.
3. Include remittance with all orders.
4. BSR proposals will not be available after the deadline of call for comment.

Comments should be addressed to the organization indicated, with a copy to the Board of Standards Review, American National Standards Institute, 25 West 43rd Street, New York, NY 10036. Fax: 212-840-2298; e-mail: psa@ansi.org

* Standard for consumer products
ASME (American Society of Mechanical Engineers)  
**Revision**  
BSR/ASME QEI-1-201x, Standard for the Qualification of Elevator Inspectors (revision of ANSI/ASME QEI-1-2013)  
This Standard applies to the qualification and duties of inspectors and inspection supervisors engaged in the inspection and testing of equipment to determine compliance with the requirements of ASME A17.1/CSA B44; ASME A17.3; CSA B44.1/ASME A17.5; ASME A18.1 or CSA B355, CSA B311, and ANSI/ASSE A10.4 or CSA Z185.

NSF (NSF International)  
**Revision**  
BSR/NSF 7-2014 (i10r5), Commercial Refrigerators and Freezers (revision of ANSI/NSF 7-2014)  
This Standard contains requirements for refrigerators and freezers used to store and/or display cold food. The types of refrigerators and freezers covered by this Standard include, but are not limited to: storage refrigerators (e.g., reach-in, under counter, walk-in, roll-in); storage freezers (e.g., reach-in, under counter, walk-in, roll-in); rapid pull-down refrigerators and freezers; refrigerated food transport cabinets; refrigerated buffet units; refrigerated food preparation units; display refrigerators; beverage coolers; and ice cream cabinets.

AAMI (Association for the Advancement of Medical Instrumentation)  
**New Standard**  
BSR/AAMI/ISO 19223-201x, Lung ventilators and related equipment - Vocabulary and semantics (new standard)  
Establishes a vocabulary of terms and semantics for all fields of respiratory care such as intensive-care ventilation, anaesthesia ventilation, home-care ventilation including sleep apnoea breathing therapy equipment and emergency and transport ventilation. It may be used: in lung ventilator and breathing therapy device standards; in health informatics standards; for labelling on medical electrical equipment and medical electrical systems; in medical electrical equipment and medical electrical systems instructions for use and accompanying documents; for medical electrical equipment and medical electrical systems interoperability; in electronic health records.

ASA (Acoustical Society of America)

Revision
BSR ASA S3.7-201x, Method for Measurement and Calibration of Earphones (revision of ANSI ASA S3.7-1995 (R2008))
Describes measurement methods for earphones and earphone transducers using couplers or ear simulators. Guidance is provided for the selection of the appropriate coupler or ear simulator for a given earphone and application. Methods for measurement of calibrated frequency response, input-output linearity, electrical impedance, and non-linear distortion are described.

ASABE (American Society of Agricultural and Biological Engineers)

New National Adoption
Specifies general safety requirements and their verification for the design and construction of standard tractors used in agriculture and forestry. These tractors have at least two axles for pneumatic-tired wheels, with the smallest track gauge of the rear axle exceeding 1 150 mm, or tracks instead of wheels, with their unballasted tractor mass being greater than 600 kg.

ASC X9 (Accredited Standards Committee X9, Incorporated)

New Standard
BSR X9.129-201x, Electronic File Format Standards for Presentment and Remittance of Legal Orders (new standard)
In today's environment, legal orders are generated in a large number of formats by a variety of different government agencies. These documents are then mailed to the bank for processing. When the bank receives the requests (mail, fax, spreadsheet), the process for fulfilling them is highly manual, which is time consuming and can be prone to errors, and there are limited areas where automation is applied. In most cases, the basic types of information, required for processing, are the same across the different request types. By creating a set of standards for electronic file formats for the different request types, benefits will be realized by both the requester and the receiver through automation of the process.

Single copy price: $100.00

This guide is intended for persons associated with robotic arc welding. It is not intended to be a guideline for other industrial robotic applications.

The purpose of D16.3M/D16.3:201X, Risk Assessment Guide for Robotic Arc Welding (revision of ANSI/AWS D16.3M/D16.3-2008) on these techniques, which the user must adapt to fit each particular application.

BSR/AWS C3.3-2008 (R201x), Recommended Practices for the Design, Manufacture, and Examination of Critical Brazed Components (reaffirmation of ANSI/AWS C3.3-2008)

This standard lists the necessary steps to assure the suitability of brazed components for critical applications. Although such applications vary widely, they have certain common considerations with respect to materials, design, manufacture, and inspection. It is the intent of this document to identify and explain these common considerations and the best techniques for dealing with them. It is beyond the scope of this document to provide specific details on these techniques, which the user must adapt to fit each particular application.

AWS (American Welding Society)
Revision
The purpose of D16.3M/D16.3-201X, Risk Assessment Guide for Robotic Arc Welding, is to identify and mitigate potential personnel safety hazards associated with robotic arc welding. It is not intended to be a guideline for other industrial robotic applications. This guide is intended for persons performing risk assessment and applies to arc welding robots and robot arc welding systems performing the gas metal arc welding (GMAW) or flux cored arc welding (FCAW) process. Applicable ANSI B11 standards include B11.0, B11.19 and B11.20, et al.

NSF International
Revision
BSR/NSF 49-201x (i40r2), Biosafety Cabinetry: Design, Construction, Performance, and Field Certification (revision of ANSI/NSF 49-2014)
This Standard applies to Class II (laminar flow) biosafety cabinetry designed to minimize hazards inherent in work with agents assigned to biosafety levels 1, 2, 3, or 4. It also defines the tests that shall be passed by such cabinetry to meet this Standard. This Standard includes basic requirements for the design, construction, and performance of biosafety cabinets that are intended to provide personnel, product, and environmental protection; reliable operation; durability and structural stability; cleanability; limitations on noise level; illumination; vibration; and motor/blower performance.

New Standard

BSR/INCITS 504-3-201x, Information Technology - Generic Identity Command Set - Part 3: GICS Platform Testing Requirements (new standard)

Limited to definition for what testing is required and does not provide technical guidelines on the methodology to be used during the testing and validation of applicable components. Focuses on platform conformance testing of Part 1 and Part 2, and focuses on what needs to be tested to enforce full functionality and interoperability. In particular, instances of brute force, exhaustive, or open-ended negative testing are not specified in the requirements in this standard. There are no test requirements for negative testing to determine abnormal behavior with the exception of interrogating access control rules and elicitation of error codes where possible and appropriate. It is expected that test methods, procedures, and environments will be developed by commercial and/or government entities to be available for developers producing GICS-compliant products.

Call for Committee Members

ASC O1

Are you interested in contributing to the development and maintenance of valuable industry safety standards? The ASC O1 is currently looking for members in the following categories:

- General Interest
- Government
- Producer
- User

If you are interested in joining the ASC O1, contact WMMA Associate Director Jennifer Miller at jennifer@wmma.org.
Final Actions on American National Standards

The standards actions listed below have been approved by the ANSI Board of Standards Review (BSR) or by an ANSI-Audited Designator, as applicable.

AISC (American Institute of Steel Construction)

New Standard

ANS (American Nuclear Society)

Reaffirmation

ASA (ASC S12) (Acoustical Society of America)

Revision

ASA (ASC S2) (Acoustical Society of America)

Reaffirmation

ASME (American Society of Mechanical Engineers)

Reaffirmation

Revision
ANSI/ASME NUM-1-2016, Rules for Construction of Cranes, Monorails, and Hoists (with Bridge or Trolley or Hoist of the Underhung Type) (revision of ANSI/ASME NUM-1-2009): 6/16/2016

Withdrawal

AWS (American Welding Society)

Revision

AWWA (American Water Works Association)

Revision

CAPA (Certified Automotive Parts Association)

Reaffirmation

CSA (CSA Group)

Revision

ECIA (Electronic Components Industry Association)

New Standard

HL7 (Health Level Seven)

Revision

NSF (NSF International)

New Standard

Revision

SCTE (Society of Cable Telecommunications Engineers)

Revision

Revision

UL (Underwriters Laboratories, Inc.)

Revision

ANSI/UL 2580-2016a, Standard for Batteries for Use In Electric Vehicles (revision of ANSI/UL 2580-2013):
Project Initiation Notification System (PINS)

ANSI Procedures require notification of ANSI by ANSI-accredited standards developers (ASD) of the initiation and scope of activities expected to result in new or revised American National Standards (ANS). Early notification of activity intended to reaffirm or withdraw an ANS and in some instances a PINS related to a national adoption is optional. The mechanism by which such notification is given is referred to as the PINS process. For additional information, see clause 2.4 of the ANSI Essential Requirements: Due Process Requirements for American National Standards.

Following is a list of proposed actions and new ANS that have been received recently from ASDs. Please also review the section in Standards Action entitled "American National Standards Maintained Under Continuous Maintenance" for additional or comparable information with regard to standards maintained under the continuous maintenance option. To view information about additional standards for which a PINS has been submitted and to search approved ANS, please visit www.NSSN.org, which is a database of standards information. Note that this database is not exhaustive.

Directly and materially affected interests wishing to receive more information or to submit comments are requested to contact the standards developer directly within 30 days of the publication of this announcement.

AAMI (Association for the Advancement of Medical Instrumentation)
Office: 4301 N. Fairfax Dr., Ste 301
Suite 301
Arlington, VA 22203-1633
Contact: Cliff Bernier
Fax: (703) 276-0793
E-mail: cbernier@aami.org

BSR/AAMI/ISO 23500-1-201x, Guidance for the preparation and quality management of fluids for haemodialysis and related therapies - Part 1: General requirements (identical national adoption of ISO 23500-1 and revision of ANSI/AAMI 23500-2014)
Stakeholders: Dialysis providers, users, and manufacturers.
Project Need: Update of guidance for the preparation and quality management of fluids for hemodialysis and related therapies.
Provides dialysis practitioners with guidance on the preparation of dialysis fluid for haemodialysis and related therapies and substitution fluid for use in online therapies, such as haemodiafiltration and haemofiltration.

Stakeholders: Dialysis manufacturers, providers, and users.
Project Need: Update of requirements for dialysis water treatment equipment.
Addressed to the manufacturer and/or supplier of water treatment systems and/or devices used for the express purpose of providing water for haemodialysis or related therapies.

BSR/AAMI/ISO 23500-3-201x, Guidance for the preparation and quality management of fluids for haemodialysis and related therapies - Part 3: Water for haemodialysis and related therapies (identical national adoption of ISO 23500-3 and revision of BSR/AAMI/ISO 23500-2-201x)
Stakeholders: Dialysis providers, users, and manufacturers.
Project Need: Update of requirements for water for hemodialysis and related therapies.
Specifies minimum requirements for water to be used in haemodialysis and related therapies. Includes water to be used in the preparation of concentrates, dialysis fluids for haemodialysis, haemodiafiltration and haemofiltration, and for the reprocessing of haemodialysers.

BSR/AAMI/ISO 23500-4-201x, Guidance for the preparation and quality management of fluids for haemodialysis and related therapies - Part 4: Concentrates for haemodialysis and related therapies (identical national adoption of ISO 23500-4 and revision of ANSI/AAMI 13958-2014)
Stakeholders: Manufacturers, providers, and users of concentrates for haemodialysis.
Project Need: Update of requirements for concentrates for haemodialysis and related therapies.
Specifies minimum requirements for concentrates used for haemodialysis and related therapies. For the purposes of this Standard, “concentrates” are a mixture of chemicals and water, or chemicals in the form of dry powder or other highly concentrated media, that are delivered to the end user to make dialysis fluid used to perform haemodialysis and related therapies. This Standard is addressed to the manufacturer of such concentrates. In several instances in this Standard, it became necessary to address the dialysis fluid, which is made by the end user, to help clarify the requirements for manufacturing concentrates.

BSR/AAMI/ISO 23500-5-201x, Guidance for the preparation and quality management of fluids for haemodialysis and related therapies - Part 5: Quality of dialysis fluid for haemodialysis and related therapies (identical national adoption of ISO 23500-5 and revision of ANSI/AAMI 11663-2014)
Stakeholders: Manufacturers, providers, and users of dialysis fluid.
Project Need: Update of requirements for dialysis fluid.
Specifies minimum-quality requirements for dialysis fluids used in haemodialysis and related therapies. Includes dialysis fluids used for haemodialysis and haemodiafiltration, including substitution fluid for haemodiafiltration and haemofiltration.

AAMI (Association for the Advancement of Medical Instrumentation)
Office: 4301 N Fairfax Drive
Suite 301
Arlington, VA 22203-1633
Contact: Hae Choe

E-mail: HChoe@aami.org; customerservice@aami.org

BSR/AAMI/IEC 60601-2-4/A1-201x, Medical electrical equipment - Part 2-4: Particular requirements for the basic safety and essential performance of cardiac defibrillators (addenda to ANSI/AAMI/IEC 60601-2-4-2010 (R2015))
Stakeholders: Manufacturers and users of cardiac defibrillator equipment.
Project Need: Proposed amendment to an IEC standard.
This standard applies to most of the defibrillators but not implantable, remote-control, or separate stand-alone cardiac monitors. This amendment updates the scope, references, terms, and definitions, as well as some of the requirements in the standard.
high humidity and heat. These tests are intended to be noncondensing.
The purpose of these tests is to evaluate materials and/or connector/socket assemblies as they are impacted by the effects of high humidity and heat. These tests are intended to be noncondensing.

Standards Action - July 1, 2016 - Page 14 of 46 Pages
This practice describes a procedure for the preparation of mechanical pulps for testing (concentration) of aqueous fiber suspensions. This method describes the measurement of pulp consistency (concentration) of aqueous fiber suspensions. This practice describes a procedure for the preparation of mechanical pulps to physical testing.

BSR/TAPPI T 240 om-201x, Consistency (concentration) of pulp suspensions (revision of ANSI/TAPPI T 240 om-2012)

Stakeholders: Manufacturers of pulp, paper, packaging, or related products; consumers or converters of such products; and suppliers of equipment, supplies, or raw materials for the manufacture of such products.

Project Need: To conduct required five-year review of an existing TAPPI/ANSI standard in order to revise it if needed to address new technology or correct errors.

This method describes the measurement of pulp consistency (concentration) of aqueous fiber suspensions.

BSR/TAPPI T 262 sp-201x, Preparation of mechanical pulps for testing (revision of ANSI/TAPPI T 262 sp-2012)

Stakeholders: Manufacturers of pulp, paper, packaging, or related products; consumers or converters of such products; and suppliers of equipment, supplies, or raw materials for the manufacture of such products.

Project Need: To conduct required five-year review of an existing TAPPI/ANSI standard in order to revise it if needed to address new technology or correct errors.

This practice describes a procedure for the preparation of mechanical pulps prior to physical testing.
American National Standards Maintained Under Continuous Maintenance

The ANSI Essential Requirements: Due Process Requirements for American National Standards provides two options for the maintenance of American National Standards (ANS): periodic maintenance (see clause 4.7.1) and continuous maintenance (see clause 4.7.2). Continuous maintenance is defined as follows:

The standard shall be maintained by an accredited standards developer. A documented program for periodic publication of revisions shall be established by the standards developer. Processing of these revisions shall be in accordance with these procedures. The published standard shall include a clear statement of the intent to consider requests for change and information on the submittal of such requests. Procedures shall be established for timely, documented consensus action on each request for change and no portion of the standard shall be excluded from the revision process. In the event that no revisions are issued for a period of four years, action to reaffirm or withdraw the standard shall be taken in accordance with the procedures contained in the ANSI Essential Requirements.

The Executive Standards Council (ExSC) has determined that for standards maintained under the Continuous Maintenance option, separate PINS announcements are not required. The following ANSI Accredited Standards Developers have formally registered standards under the Continuous Maintenance option.

- AAMI (Association for the Advancement of Medical Instrumentation)
- AAMVA (American Association of Motor Vehicle Administrators)
- AGA (American Gas Association)
- AGSC (Auto Glass Safety Council)
- ASC X9 (Accredited Standards Committee X9, Incorporated)
- ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.)
- ASME (American Society of Mechanical Engineers)
- ASTM (ASTM International)
- GBI (The Green Building Initiative)
- GEIA (Greenguard Environmental Institute)
- HL7 (Health Level Seven)
- IESNA (The Illuminating Engineering Society of North America)
- MHI (ASC MH10) (Material Handling Industry)
- NAHBRC (NAHB Research Center, Inc.)
- NBBPVI (National Board of Boiler and Pressure Vessel Inspectors)
- NCPDP (National Council for Prescription Drug Programs)
- NISO (National Information Standards Organization)
- NSF (NSF International)
- PRCA (Professional Ropes Course Association)
- RESNET (Residential Energy Services Network)
- TIA (Telecommunications Industry Association)
- UL (Underwriters Laboratories, Inc.)

To obtain additional information with regard to these standards, including contact information at the ANSI Accredited Standards Developer, please visit ANSI Online at www.ansi.org/asd, select “Standards Activities,” click on “Public Review and Comment” and “American National Standards Maintained Under Continuous Maintenance.” This information is also available directly at www.ansi.org/publicreview.

Alternatively, you may contact the Procedures & Standards Administration department (PSA) at psa@ansi.org or via fax at 212-840-2298. If you request that information be provided via E-mail, please include your E-mail address; if you request that information be provided via fax, please include your fax number. Thank you.
ANSI-Accredited Standards Developers Contact Information

The addresses listed in this section are to be used in conjunction with standards listed in PINS, Call for Comment and Final Actions. This section is a list of developers who have submitted standards for this issue of Standards Action – it is not intended to be a list of all ANSI-Accredited Standards Developers. Please send all address corrections to Standards Action Editor at standact@ansi.org.

This section lists proposed standards that the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC) are considering for approval. The proposals have received substantial support within the technical committees or subcommittees that developed them and are now being circulated to ISO and IEC members for comment and vote. Standards Action readers interested in reviewing and commenting on these documents should order copies from ANSI.

**Comments**

Comments regarding ISO documents should be sent to ANSI’s ISO Team (isot@ansi.org); those regarding IEC documents should be sent to Tony Zertuche, General Secretary, USNC/IEC, at ANSI’s New York offices (tzertuche@ansi.org). The final date for offering comments is listed after each draft.

**ISO Standards**

**AIR QUALITY (TC 146)**
ISO/DIS 19087, Workplace air - Analysis of respirable crystalline silica by Fourier-Transform Infrared spectroscopy - 9/14/2016, $88.00

**AIRCRAFT AND SPACE VEHICLES (TC 20)**
ISO/DIS 19683, Space systems - Design qualification and acceptance tests of small spacecraft and units - 9/16/2016, $146.00

**BUILDING ENVIRONMENT DESIGN (TC 205)**
ISO/DIS 17800, Facility smart grid information model - 9/8/2016, $311.00
ISO/DIS 16484-2, Building automation and control systems (BACS) - Part 2: Hardware - 7/16/2016, $134.00

**EQUIPMENT FOR FIRE PROTECTION AND FIRE FIGHTING (TC 21)**
ISO/DIS 7240-18, Fire detection and alarm systems - Part 18: Input/output devices - 7/14/2016, $71.00
ISO/DIS 7240-22, Fire detection and alarm systems - Part 22: Smoke-detection equipment for ducts - 7/16/2016, $112.00

**FASTENERS (TC 2)**
ISO/DIS 10683, Fasteners - Non-electrolytically applied zinc flake coatings - 7/14/2016, $98.00

**HYDROGEN ENERGY TECHNOLOGIES (TC 197)**
ISO/DIS 19880-3, Gaseous hydrogen - Fueling stations - Part 3: Valves - 7/16/2016, $93.00

**MACHINE TOOLS (TC 39)**
ISO/DIS 19085-6, Woodworking machines - Safety - Part 6: Single spindle vertical moulding machines (toupies) - 9/16/2016, $134.00

**MEASUREMENT OF FLUID FLOW IN CLOSED CONDUITS (TC 30)**
ISO/DIS 12764, Measurement of fluid flow in closed conduits - Flowrate measurement by means of vortex shedding flowmeters inserted in circular cross-section conduits running full - 7/17/2016, $82.00

**MECHANICAL VIBRATION AND SHOCK (TC 108)**
ISO/DIS 16063-45, Methods for the calibration of vibration and shock transducers - Part 45: In-situ calibration of transducers with built in calibration coil - 7/15/2016, $62.00

**NICKEL AND NICKEL ALLOYS (TC 155)**
ISO/DIS 6283, Refined nickel - 9/15/2016, $33.00

**PAINTS AND VARNISHES (TC 35)**
ISO/DIS 6270-2, Paints and varnishes - Determination of resistance to humidity - Part 2: Condensation (in-cabinet exposure) - 9/3/2016, $46.00

**PLASTICS (TC 61)**
ISO 472/DAmd1, Plastics - Vocabulary - Amendment 1 - 7/15/2016, $53.00
ISO/DIS 9370, Plastics - Instrumental determination of radiant exposure in weathering tests - General guidance and basic test method - 7/14/2016, $77.00

**PLASTICS PIPES, FITTINGS AND VALVES FOR THE TRANSPORT OF FLUIDS (TC 138)**
ISO/DIS 11413, Plastics pipes and fittings - Preparation of test piece assemblies between a polyethylene (PE) pipe and an electrofusion fitting - 9/16/2016, $53.00

**ROAD VEHICLES (TC 22)**
ISO/DIS 15118-5, Road vehicles - Vehicle to grid communication interface - Part 5: Physical layer and data link layer conformance test - 7/14/2016, $230.00
ISO/DIS 20077-1, Road Vehicles - Extended vehicle (ExVe) methodology - Part 1: General information - 9/8/2016, $82.00

**ROLLING BEARINGS (TC 4)**
ISO/DIS 15118-5, Road vehicles - Vehicle to grid communication interface - Part 5: Physical layer and data link layer conformance test - 7/14/2016, $230.00
ISO/DIS 20077-1, Road Vehicles - Extended vehicle (ExVe) methodology - Part 1: General information - 9/8/2016, $82.00

**RUBBER AND RUBBER PRODUCTS (TC 45)**
ISO/DIS 1419, Rubber- or plastics-coated fabrics - Accelerated-ageing tests - 9/15/2016, $40.00
ISO/DIS 1825, Rubber hoses and hose assemblies for aircraft ground fuelling and defuelling - Specification - 7/15/2016, $93.00
ISO/DIS 2411, Rubber- or plastics-coated fabrics - Determination of coating adhesion - 7/15/2016, $67.00
ISO/DIS 3949, Plastics hoses and hose assemblies - Textile-reinforced types for hydraulic applications - Specification - 7/16/2016, $82.00
ISO/DIS 20058, Rubber thread - Specification - 7/16/2016, $40.00
STEEL (TC 17)
ISO/DIS 3887, Steels - Determination of the depth of decarburization - 7/15/2016, $58.00
TIMBER STRUCTURES (TC 165)
ISO/DIS 12122-5, Timber structures - Determination of characteristic values - Part 5: Mechanical connections - 7/14/2016, $62.00
TRADITIONAL CHINESE MEDICINE (TC 249)
ISO/DIS 20409, Traditional Chinese medicine - Panax notoginseng root and rhizome - 7/13/2016, $71.00
TYRES, RIMS AND VALVES (TC 31)
ISO/DIS 29802, All terrain (AT) tyres and rims - Symbol marked pneumatic tyres on 5 degree tapered rims - Designation, dimension, marking and load ratings - 7/16/2016, $82.00
ISO/IEC JTC 1, Information Technology
ISO/IEC DIS 26558, Software and systems engineering - Methods and tools for variability modeling in software and systems product line - 7/16/2016, $107.00
ISO/IEC DIS 26559, Software and systems engineering - Methods and tools for variability traceability in software and systems product line - 7/16/2016, $102.00
ISO/IEC DIS 19794-15, Information technology - Biometric data interchange format - Part 15: Palm crease image data - 9/8/2016, $82.00
IEC Standards
2/1833/DTS, IEC 60034-30-2 TS Ed.1: Rotating electrical machines - Part 30-2: Efficiency classes of variable speed AC motors (IE-code), 09/16/2016
8A/28/NP, Grid code compliance assessment for grid connection of wind and PV power plants, 09/16/2016
13/1701A/FDIS, IEC 62053-22 Amd. 1: Electricity metering equipment (AC) - Particular requirements - Part 22 Static meters for active energy (classes 0.2 S and 0.5 S), 07/29/2016
17C/645/FDIS, IEC 62271-212 Ed.1: High-voltage switchgear and controlgear - Part 212: Compact Equipment Assembly for Distribution Substation (CEADS), 08/05/2016
18/1538/FDIS, IEC 60992-202: Electrical installations in ships - Part 202: System design - Protection, 08/05/2016
22F/422/CD, Amendment 2 - IEC 62501 Ed.1: Voltage sourced converter (VSC) valves for high-voltage direct current (HVDC) power transmission = Electrical testing, 08/19/2016
22F/423/CD, Amendment 1 - IEC 62751-1 Ed.1: Determination of power losses in voltage sourced converter (VSC) valves for high-voltage direct current (HVDC) systems - Part 1: General requirements, 08/19/2016
23E/969/CD, IEC 62020 A2 Ed.1: Electrical accessories - Residual current monitors for household and similar uses (RCMs), 09/16/2016
34/326/CD, IEC 60050-845 Ed. 2: International electrotechnical vocabulary - Chapter 845: Lighting, 09/16/2016
36/386/FDIS, IEC 62772 Ed. 1.0: Composite hollow core station post insulators for substations with a.c. voltage greater than 1 000 v and d.c. voltage greater than 1 500 v - Definitions, test methods and acceptance criteria, 08/05/2016
46/604/NP, Cable Accessories - Hanger Test Methods, 09/16/2016
46/606/CD, IEC 62153-4-9: Metallic Communication Cable test methods - Part 4-9: Electromagnetic compatibility (EMC) - Coupling attenuation of screened balanced cables, triaxial method, 09/16/2016
46F/346/CDV, IEC 60154-4 ed 2.0: Relevant Specifications for Flanges for Circular Waveguides, 09/16/2016
46F/347/CDV, IEC 61169-58 Ed1: Radio-Frequency Connectors - Part 58: Sectional specification for RF coaxial connectors with blind-mate coupling - Characteristic impedance 50 Ω (type SBMA), 08/05/2016
55/1575/CDV, IEC 60317-70/Ed1: Specifications for particular types of winding wires - Part 70: Polyester glass-fibre wound unvarnished and fused or resin or varnish impregnated, bare or enamelled round copper wire, temperature index 155, 09/16/2016
55/1576/CDV, IEC 60317-71/Ed1: Specifications for particular types of winding wires - Part 71: Polyester glass-fibre wound unvarnished and fused or resin or varnish impregnated, bare or enamelled round copper wire, temperature index 180, 09/16/2016
55/1577/CDV, IEC 60317-72/Ed1: Specifications for particular types of winding wires - Part 72: Polyester glass-fibre wound silicone resin or varnish impregnated, bare or enamelled round copper wire, temperature index 200, 09/16/2016
62B/1012/CDV, Amendment 1 to IEC 60601-2-43: Medical electrical equipment - Part 2-43: Particular requirements for the basic safety and essential performance of X-ray equipment for interventional procedures, 09/16/2016
62D/1368/FDIS, ISO 80369-7: Small-bore connectors for liquids and gases in healthcare applications - Part 7: Connectors for intravascular or hypodermic applications, 08/20/2016
69/420/CD, IEC 62840-2 Ed.1: Electric vehicle battery swap system - Part 2: Safety requirements, 08/05/2016
69/421/CDV, ISO 15118-5: Road vehicles - Vehicle to grid communication interface - Part 5:Physical layer and data link layer conformance test, 09/16/2016
82/1113/CDV, IEC 62920 Ed.1: EMC requirements and test methods for power conversion equipment applying to photovoltaic power generating systems, 09/16/2016
Newly Published ISO & IEC Standards

ISO Standards

FINE CERAMICS (TC 206)
ISO 17561:2016, Fine ceramics (advanced ceramics, advanced technical ceramics) - Test method for elastic moduli of monolithic ceramics at room temperature by sonic resonance, $88.00

RUBBER AND RUBBER PRODUCTS (TC 45)
ISO 1420:2016, Rubber- or plastics-coated fabrics - Determination of resistance to penetration by water, $51.00

SIEVES, SIEVING AND OTHER SIZING METHODS (TC 24)
ISO 9044:2016, Industrial woven wire cloth - Technical requirements and tests, $123.00

SOLID MINERAL FUELS (TC 27)
ISO 13909-1:2016, Hard coal and coke - Mechanical sampling - Part 1: General introduction, $88.00
ISO 13909-2:2016, Hard coal and coke - Mechanical sampling - Part 2: Coal - Sampling from moving streams, $173.00
ISO 13909-3:2016, Hard coal and coke - Mechanical sampling - Part 3: Coal - Sampling from stationary lots, $123.00
ISO 13909-4:2016, Hard coal and coke - Mechanical sampling - Part 4: Coal - Preparation of test samples, $173.00
ISO 13909-5:2016, Hard coal and coke - Mechanical sampling - Part 5: Coke - Sampling from moving streams, $149.00
ISO 13909-6:2016, Hard coal and coke - Mechanical sampling - Part 6: Coke - Preparation of test samples, $149.00
ISO 13909-7:2016, Hard coal and coke - Mechanical sampling - Part 7: Methods for determining the precision of sampling, sample preparation and testing, $200.00
ISO 13909-8:2016, Hard coal and coke - Mechanical sampling - Part 8: Methods of testing for bias, $173.00

STEEL (TC 17)
ISO 4942:2016, Steels and irons - Determination of vanadium content - N-BPHA spectrophotometric method, $88.00

WATER QUALITY (TC 147)

ISO Technical Specifications

PACKAGING (TC 122)
ISO/TS 18614:2016, Packaging - Label material - Required information for ordering and specifying self-adhesive labels, $200.00

ISO/IEC JTC 1, Information Technology

ISO/IEC 25022:2016, Systems and software engineering - Systems and software quality requirements and evaluation (SQuaRE) - Measurement of quality in use, $200.00

IEC Standards

ELECTROSTATICS (TC 101)
IEC 61340-2-3 Ed. 2.0 b:2016, Electrostatics - Part 2-3: Methods of test for determining the resistance and resistivity of solid materials used to avoid electrostatic charge accumulation, $206.00
S+ IEC 61340-2-3 Ed. 2.0 en:2016 (Redline version), Electrostatics - Part 2-3: Methods of test for determining the resistance and resistivity of solid materials used to avoid electrostatic charge accumulation, $265.00

HIGH-VOLTAGE TESTING TECHNIQUES (TC 42)
IEC 61180 Ed. 1.0 b:2016, High-voltage test techniques for low-voltage equipment - Definitions, test and procedure requirements, test equipment, $278.00

INDUSTRIAL-PROCESS MEASUREMENT AND CONTROL (TC 65)
IEC 62453-303-1 Amd.1 Ed. 1.0 b:2016, Amendment 1 - Field device tool (FDT) interface specification - Part 303-1: Communication profile integration - IEC 61784 CP 3/1 and CP 3/2, $363.00
IEC 62453-303-2 Amd.1 Ed. 1.0 b:2016, Amendment 1 - Field device tool (FDT) interface specification - Parts 303-2: Communication profile integration - IEC 61784 CP 3/1 and CP 3/2, $22.00
IEC 62453-303-3 Ed. 1.1 b:2016, Field device tool (FDT) interface specification - Part 303-3: Communication profile integration - IEC 61784 CP 3/4, CP 3/5 and CP 3/6, $315.00
IEC 62453-303-2 Amd 1 Ed. 1.0 b:2016, Amendment 1 - Field device tool (FDT) interface specification - Part 303-2: Communication profile integration - IEC 61784 CP 3/4, CP 3/5 and CP 3/6, $22.00

OTHER
CISPR 11 Ed. 6.1 b:2016, Industrial, scientific and medical equipment - Radio-frequency disturbance characteristics - Limits and methods of measurement, $484.00
CISPR 11 Amd 1 Ed. 6.0 b:2016, Amendment 1 - Industrial, scientific and medical equipment - Radio-frequency disturbance characteristics - Limits and methods of measurement, $61.00

POWER CAPACITORS (TC 33)
IEC 62146-1 Ed. 1.1 b:2016, Grading capacitors for high-voltage alternating current circuit-breakers - Part 1: General, $339.00
IEC 62146-1 Amd.1 Ed. 1.0 b:2016, Amendment 1 - Grading capacitors for high-voltage alternating current circuit-breakers - Part 1: General, $22.00

SAFETY OF HOUSEHOLD AND SIMILAR ELECTRICAL APPLIANCES (TC 61)

IEC 60335-2-14 Ed. 6.0 b:2016, Household and similar electrical appliances - Safety - Part 2-14: Particular requirements for kitchen machines, $254.00

S+ IEC 60335-2-14 Ed. 6.0 en:2016 (Redline version), Household and similar electrical appliances - Safety - Part 2-14: Particular requirements for kitchen machines, $290.00

IEC Technical Reports

FIBRE OPTICS (TC 86)

IEC/TR 62691 Ed. 2.0 en:2016, Optical fibre cables - Guidelines to the installation of optical fibre cables, $278.00

PERFORMANCE OF HOUSEHOLD ELECTRICAL APPLIANCES (TC 59)

IEC/TR 62970 Ed. 1.0 en:2016, Guidance on how to conduct round robin tests for household and similar electrical appliances, $61.00
Proposed Foreign Government Regulations

Call for Comment

U.S. manufacturers, exporters, regulatory agencies and standards developing organizations may be interested in proposed foreign technical regulations issued by Member countries of the World Trade Organization (WTO). In accordance with the WTO Agreement on Technical Barriers to Trade (TBT Agreement), Members are required to report proposed technical regulations that may significantly affect trade to the WTO Secretariat in Geneva, Switzerland. In turn, the Secretariat disseminates the information to all WTO Members. The purpose of this requirement is to provide global trading partners with an opportunity to review and comment on the regulations before they become final.

The National Center for Standards and Certification Information (NCSCI) at the National Institute of Standards and Technology (NIST), distributes these proposed foreign technical regulations to U.S. stakeholders via an online service, Notify U.S. Notify U.S. is an e-mail and Web service that allows interested U.S. parties to register, obtain notifications, and read full texts of regulations from countries and for industry sectors of interest to them. To register for Notify U.S., please go to Internet URL: http://www.nist.gov/notifyus/ and click on “Subscribe”.

NCSCI is the WTO TBT Inquiry Point for the U.S. and receives all notifications and full texts of regulations to disseminate to U.S. Industry. For further information, please contact: NCSCI, NIST, 100 Bureau Drive, Gaithersburg, MD 20899-2160; Telephone: (301) 975-4040; Fax: (301) 926-1559; E-mail: ncsci@nist.gov or notifyus@nist.gov.
Information Concerning

American National Standards

INCITS Executive Board
ANSI Accredited SDO and US TAG to ISO/IEC JTC 1, Information Technology

The InterNational Committee for Information Technology Standards (INCITS), an ANSI accredited SDO, is the forum of choice for information technology developers, producers and users for the creation and maintenance of formal de jure IT standards. INCITS’ mission is to promote the effective use of Information and Communication Technology through standardization in a way that balances the interests of all stakeholders and increases the global competitiveness of the member organizations.

The INCITS Executive Board serves as the consensus body with its oversight of programs of its 40+ Technical Committees. Additionally, the INCITS Executive Board exercises international leadership in its role as the US Technical Advisory Group (TAG) to ISO/IEC JTC 1, Information Technology.

The INCITS Executive Board has eleven membership categories that can be viewed at http://www.incits.org/participation/membership-info. Membership in all categories is always welcome. INCITS also seeks to broaden its membership base and looks to recruit new participants in the following under-represented membership categories:

- **Producer – Hardware**
  This category primarily produces hardware products for the ITC marketplace.

- **Producer – Software**
  This category primarily produces software products for the ITC marketplace.

- **Distributor**
  This category is for distributors, resellers or retailers of conformant products in the ITC industry.

- **User**
  This category includes entities that primarily reply on standards in the use of a products/service, as opposed to producing or distributing conformant products/services.

- **Consultants**
  This category is for organizations whose principal activity is in providing consulting services to other organizations.

- **Standards Development Organizations and Consortia**
  o “Minor” an SDO or Consortium that (a) holds no TAG assignments; or (b) holds no SC TAG assignments, but does hold one or more Work Group (WG) or other subsidiary TAG assignments.

- **Academic Institution**
  This category is for organizations that include educational institutions, higher education schools or research programs.

- **Other**
  This category includes all organizations who do not meet the criteria defined in one of the other interest categories.

Membership in the INCITS Executive Board is open to all directly and materially affected parties in accordance with INCITS membership rules. To find out more about participating on the INCITS Executive Board, please contact Jennifer Garner at 202-626-5737 or j Garner@ilitc.org. Visit www.INCITS.org for more information regarding INCITS activities.

Calls for Members

Society of Cable Telecommunications

ANSI Accredited Standards Developer

SCTE, an ANSI-accredited SDO, is the primary organization for the creation and maintenance of standards for the cable telecommunications industry. SCTE’s standards mission is to develop standards that meet the needs of cable system operators, content providers, network and customer premises equipment manufacturers, and all others who have an interest in the industry through a fair, balanced and transparent process.

SCTE is currently seeking to broaden the membership base of its ANSI consensus bodies and is interested in new members in all membership categories to participate in new work in fiber-optic networks, advanced advertising, 3D television, and other important topics. Of particular interest is membership from the content (program and advertising) provider and user communities.

Membership in the SCTE Standards Program is open to all directly and materially affected parties as defined in SCTE’s membership rules and operating procedures. More information is available at www.scte.org or by e-mail from standards@scte.org.

ANSI Accredited Standards Developers

Approval of Reaccreditation

ARMA International

ANSI’s Executive Standards Council has approved the reaccreditation of ARMA International, an ANSI Member and Accredited Standards Developer, under its recently revised ARMA International Standards Development Program, Policies and Procedures; American National Standards and Technical Reports for documenting consensus on ARMA International-sponsored American National Standards, effective June 27, 2016. For additional information, please contact: Nancy Barnes, PhD, Standards Consultant, ARMA International, 11880 College Boulevard, Suite 450, Overland Park, KS 66210; phone: 913.312.5565; e-mail: standards@armaintl.org.

IAPMO

The reaccreditation of IAPMO, an ANSI Member and Accredited Standards Developer, has been approved at the direction of ANSI’s Executive Standards Council under its recently revised IAPMO WEStand Regulations for documenting consensus on IAPMO-sponsored Water Efficiency and Sanitation American National Standards, effective June 23, 2016. For additional information, please contact: Mr. Dan Cole, Technical Services Manager, IAPMO Chicago Regional Office, 18927 Hickory Creek Drive, Suite 220, Mokena, IL 60448; phone: 708.995.3009; e-mail: dan.cole@iapmo.org.
American Society of Mechanical Engineers (ASME)

Comment Deadline: August 1, 2016

The American Society of Mechanical Engineers (ASME), an ANSI member and Accredited Standards Developer, has submitted revisions to its currently accredited Procedures for ASME Codes and Standards Development Committees for documenting consensus on ASME-sponsored American National Standards, under which it was last reaccredited in 2015. As the current revisions appear to be substantive in nature, the reaccreditation process is initiated.

To obtain a copy of the revised procedures or to offer comments, please contact: Mr. William Berger, Managing Director, Standards, ASME, 2 Park Avenue, 6th Floor, New York, NY 10016-5990; phone: 212.591.8520; e-mail: bergerw@asme.org. You may view/download a copy of the revisions during the public review period at the following URL: www.ansi.org/accredPR. Please submit any public comments on the revised procedures to ASME by August 1, 2016, with a copy to the ExSC Recording Secretary in ANSI’s New York Office (jthompso@ANSI.org).

**ANSI Accreditation Program for Greenhouse Gas Validation/Verification Bodies**

**Reaccreditation**

**SAI Global**

Comment Deadline: August 1, 2016

In accordance with the following ISO standards:

ISO 14065:2013, Greenhouse gases – Requirements for greenhouse gas validation and verification bodies for use in accreditation or other forms of recognition

SAI Global

John Fraser

20 Carlson Court, Suite 200

Toronto M9W 7K6, Canada

Phone: 416-401-8671

E-mail: john.fraser@omi-saiglobal.com

On June 28, 2016, ANSI's Greenhouse Gas Validation/Verification Body Accreditation Committee granted reaccreditation to SAI Global for the following:

**Scope:**

Verification of assertions related to GHG emissions and removals at the organizational level

01. General

02. Manufacturing

03. Power Generation

05. Mining and Mineral Production

06. Metals Production

07. Chemical Production

08. Oil and gas extraction, production and refining including petrochemicals

09. Waste

Please send your comments by August 1, 2016 to Ann Howard, Director, Environmental Accreditation Programs, American National Standards Institute, 1899 L Street, NW, 11th Floor, Washington, DC 20036, Fax: 202-293-9287 or e-mail: ahoward@ansi.org.

**ANSI Accreditation Program for Third Party Product Certification Agencies**

**Request for Scope Extension**

**Curtis-Strauss, LLC**

Comment Deadline: August 1, 2016

Mr. Tadas Stukas

Quality & HSE Manager

Curtis-Straus, LLC

One Distribution Center Circle, Suite #1

Littleton, MA 01460

Phone: 978-486-8880

Fax: 978-486-8828

E-mail: tadas.stukas@us.bureauveritas.com

Web: www.curtis-straus.com

Curtis-Straus, LLC, an ANSI-accredited certification body, has requested a scope extension to include the following:

**EPA ENERGY STAR®**

- ENERGY STAR® Product Specification for Small Network Equipment
- ENERGY STAR® Product Specification for Large Network Equipment

Please send your comments by August 1, 2016 to Reinaldo Babino Figueiredo, Senior Program Director, Product/Process/Services Accreditation Programs, American National Standards Institute, 1899 L Street, NW, 11th Floor, Washington, DC 20036, Fax: 202-293 9287 or e-mail: rfigueir@ansi.org, or Nikki Jackson, Director, Product Certifier Accreditation, American National Standards Institute, 1899 L Street, NW, 11th Floor, Washington, DC 20036, Fax: 202-293 9287 or e-mail: njackson@ansi.org.

**International Organization for Standardization (ISO)**

**Call for U.S. TAG Administrator**

ISO/TC 17 – Steel Subcommittees

There is currently no ANSI-accredited U.S. TAG Administrator for ISO/TC 17/SC 15 and ISO/TC 17/SC 17, and therefore ANSI is not a member of these committees. The Secretariats for these committees are held by China (SAC).

ISO/TC 17/SC 15 operates under the following scope:

- Standardization of terminology, technical requirements, materials, dimensions and tolerances, test methods for railway rails, rail fasteners, wheel and wheelsets.

ISO/TC 17/SC 17 operates under the following scope:

- Standardization of qualities, dimensions and tolerances of steel wire rod and steel wire products from a wire mill.
- Standardization of types and qualities of wire rod (unalloyed steel for wire drawing and wire rod for electrodes).
- Standardization of types and qualities of wires in so far as they are only used in that product form. Excluded are those products which are already standardized by other Committees, e.g., steel wire ropes excluding stainless steel wire, stainless steel wire rod and heat resisting wire which remain the responsibility of ISO/TC 17/SC 4.

Organizations interested in serving as the U.S. TAG Administrator or participating on a U.S. TAG should contact ANSI’s ISO Team (isot@ansi.org).
ISO/TC 34 – Food Products Subcommittees

There is currently no ANSI-accredited U.S. TAG Administrator for the below subcommittees to ISO/TC 34 – Food Products, and therefore ANSI is not a member of these subcommittees. The Secretariats for these subcommittees are not held by the United States (ANSI).

ISO/TC 34/SC 3 – Fruits and vegetables and their derived products operates under the following scope:

Standardization in the field of fruit and vegetable and their derived products, in particular, terminology, sampling, product specifications, requirements for packaging, storage, transportation, methods of tests and analysis.

The following subcommittees operate under the scope of ISO/TC 34:

Standardization in the field of human and animal foodstuffs, covering the food chain from primary production to consumption, as well as animal and vegetable propagation materials, in particular, but not limited to, terminology, sampling, methods of test and analysis, product specifications, food and feed safety and quality management and requirements for packaging, storage and transportation.

Excluded:

products covered by ISO/TC 54 Essential oils and ISO/TC 93 Starch (including derivatives and by-products).

ISO/TC 34/SC 4 – Cereals and pulses
ISO/TC 34/SC 5 – Milk and milk products
ISO/TC 34/SC 7 – Spices, culinary herbs and condiments
ISO/TC 34/SC 8 – Tea
ISO/TC 34/SC 10 – Animal feeding stuffs

Organizations interested in serving as the U.S. TAG Administrator or participating on a U.S. TAG should contact ANSI's ISO Team (isot@ansi.org).

Meeting Notices

AHRI Meetings

Revision of ANSI/AHRI Standards 390 (I-P) and 391 (SI)-2003, Performance Rating of Single Package Vertical Air Conditioners and Heat Pumps

The Air-Conditioning, Heating, and Refrigeration Institute (AHRI) will be holding an online meeting on July 14 from 1 p.m. to 2 p.m. If you are interested in participating in the meeting or providing comments on the standard, please contact AHRI staff member Alan Calbi at acalbi@ahrinet.org.

Revision of ANSI/AHRI Standard 440-2008, Performance Rating of Room Fan-Coils

The Air-Conditioning, Heating, and Refrigeration Institute (AHRI) will be holding an online meeting on bi-weekly on Tuesdays between July 12 and November 29 from 11 a.m. to 12 p.m. If you are interested in participating in the meeting or providing comments on the standard please contact AHRI staff member Steve O'Leary at soleary@ahrinet.org.
BSI, the ISO member body for the United Kingdom, has submitted to ISO a proposal for a new field of ISO technical activity on Organizational Governance, with the following scope statement:

*Standardization of organizational governance, including aspects of accountability, direction and control – which may include principles of governance, anti-bribery, conflict of interest, due diligence, whistleblowing, compliance, remuneration structures and external reporting, amongst others.*

*This proposal is for a new technical committee in the field of organizational governance. For the purposes of this proposal, governance may be defined as a "system by which the whole organization is directed, controlled and held accountable to achieve its core purpose over the long term". The term “corporate governance” is typically used for the governance of private and publicly-listed companies.*

*The TC would develop and maintain standards applicable for all organizations to improve the effective delivery of governance. This proposal recognizes that, although interrelated, there is an important distinction between management and governance. The above definition of governance places it into a context of accountability whereas management can be deemed to be "the act of bringing people together to accomplish desired goals and objectives, using available resources in an efficient, effective and risk-aware manner." While governance is linked to management, it is distinct from it because it deals with the accountability of a whole organization to all of its stakeholders and helps ensure that the organization, as a whole, fulfills its full purpose. Thus, governance is a unique area that merits a distinct portfolio of work, separate but complementary to management standards.*

Anyone wishing to review the proposal can request a copy by contacting ANSI's ISO Team (isot@ansi.org), with a submission of comments to Steve Cornish (scornish@ansi.org) by close of business on Friday, July 1, 2016.
June 2016 Draft for Public Review

QEI-1-201X, Standard for the Qualification of Elevator Inspectors
(Proposed Revisions of ASME QEI-1-2013)

TENTATIVE
SUBJECT TO REVISION OR WITHDRAWAL

Specific Authorization Required for Reproduction or Quotation

ASME Codes and Standards
FOREWORD

Participants from the National Association of Elevator Safety Authorities, the National Elevator Industries, Inc., the American Insurance Association, and the Alliance of American Insurers met in early 1981 to discuss the trend among state and municipal governments to rely on private inspection agencies and self-inspection by elevator companies to perform inspections that had traditionally been done by the jurisdictional authorities. One of the prime concerns of the group was to develop a means for ensuring that the quality of the inspections remained at a high level. The group determined that addressing the qualifications of the persons performing the inspections is an important part of achieving this goal.

The American Society of Mechanical Engineers (ASME), which had been actively involved in elevator safety through the sponsorship of the A17 Elevator and Escalator Committee, was asked to participate in the group’s discussions. ASME expressed an interest in this project and established an ad-hoc committee consisting of members of the above organizations to develop a scope and guidelines for the establishment of a standards-writing committee.

On November 12, 1981, the ASME Council on Codes and Standards responded to this request and approved the formation of the ASME Committee on the Qualification of Elevator Inspectors (QEI Committee) to develop an American National Standard.

The goal established for the QEI Committee is to provide for the public health, safety, and welfare by supplementing existing standards in this field. ASME A17.1, Safety Code for Elevators and Escalators, covers design, construction, operation, inspection, testing, maintenance, alteration, and repair. ASME A17.2, Guide for Inspection of Elevators, Escalators, and Moving Walks, supplements the Safety Code by providing guidelines for the inspection and testing of the equipment. Neither A17.1 nor A17.2, however, covers the qualifications of inspection personnel, and the duties of the inspector are only covered briefly in the Introduction to the Inspectors’ Manual.

The excellent safety record of elevators, escalators, and related equipment has been maintained, in part, by quality field inspections and tests. However, advancing technology and safety requirements have highlighted the need for establishing uniform criteria for the persons performing these inspections. The quality of inspections, of course, depends on the competence of the inspector, and the Standard for the Qualification of Elevator Inspectors is dedicated to that purpose.

Safety codes and standards are intended to enhance public health and safety. Revisions result from committee consideration of factors such as technological advances, new data, and changing environmental and industry needs. Revisions do not imply that previous editions were inadequate.

With the harmonization of ASME A17.1 and CSA B44, the application of the QEI Standard is now widespread in Canada. To enable the effective use of the QEI Standard by the jurisdictions in Canada enforcing codes other than those published by ASME, the QEI Standard was revised in the 2007 edition to include reference to equivalent Canadian codes. The reference to any Canadian standard and access to or possession of those standards is necessary only in Canada or where the standards are adopted or enforced.

In the 2013 edition, the QEI-1 Standard was revised to reflect a decision made by ASME to discontinue its QEI accreditation program. Effective January 1, 2014, accreditation of organizations which certify elevator inspectors and inspection supervisors is being discontinued by the American Society of Mechanical Engineers, therefore requirements have been revised in this area to allow for accreditation to be done by other organizations.

This revision of QEI-1 was approved by the American National Standards Institute on [insert date].
Section 2.2
Duties
(c) . . .
   (1) . . .
   (2) the report shall be signed by the certified inspector and shall include his or her
certification number and certifying agency. Electronic or written signatures are acceptable to
meet the requirement.
   (3) . . .

Rationale: Many inspection documents are submitted electronically without a traditional ink
signature, using an “electronic signature” or time stamp that allows the AHJ to have
accountability for a signature.

Proposal: Define “effective date” in QEI-1-2013:

Effective Date: 1. (As it relates to the certification documentation), the start date of the most
recent certification of the inspector or inspection supervisor.
2. (As it relates to the issuance and use of the QEI-1 Standard and ASME Standards); Generally, six (6)
months after the issuance of the standard or as otherwise stated in that standard.
3. (As it relates to other standards); the date, as determined by the publishing agency,
when the document may be used by jurisdictions adopting the standard.

Rationale: The term “effective date” is not currently defined. While intuitively obvious to the most
casual observer its meaning becomes ambiguous as used in various sections throughout the QEI-1
Standard. For the purpose of the QEI-1 document with regard to the information contained on the
Certification Card (Appendix C), its meaning is meant to quantify the continuous period of the
current certification from the start date to the expiration date of the inspector or inspection
supervisor.

Where an inspector or inspection supervisor has a break in the period of certification, the
Certification Card will reflect only the most recent period of continuous certification. Prior
continuous certification period(s) would be reflected on previous, expired, Certification Card(s).

Revise 1.3 (j) to read:

*Rationale:* The operative term in 1.3(j) is “latest edition” as in preceding and subsequent paragraphs in Section 1.3. The term “Safety Handbook” appeared only in Section 2.1 paragraph (a). Changing to the full official title of the document is consistent with the manner in which the EIFESH is referenced throughout the QEI Standard.

Revise 2.1(a) to read as follows:

(a) knowledge of personal safety practices, including, but not limited to, the safety practices contained in the Elevator Industry Field Employees’ Safety Handbook necessary to perform the following:

This is a working document under consideration by the AWS D1 Committee on Structural Welding. It is made available solely to solicit comments from interested parties, and may not be relied upon or utilized for any other purpose. Draft documents may change significantly in subsequent versions.

</tr>
</tbody>
</table>
C-4.5.2.3 Optional Supplement Moisture-Resistant Designators. In order for a low-hydrogen electrode to be designated as low-moisture-absorbing with the “R” suffix designator, electrodes are tested by exposure to 27°C [80°F] and 80% relative humidity for a period of not less than nine hours. These tests are defined in AWS A5.1/A5.1M and AWS A5.5/A5.5M, and are typically conducted by the electrode manufacturer. The nine hour time period was selected based on a typical workshift length, including mealtime. The moisture content of the exposed covering must exceed the maximum specified moisture content for the “R” designated electrode and classification in the appropriate AWS A5.1/A5.1M or AWS A5.5/A5.5M specification. Such electrodes may be used with exposure times of up to nine hours on steels with a minimum specified yield strength of 345 MPa [50ksi]. For higher strength steels, exposure time is limited to that permitted in Table 4.6.

*a See 4.5.2.3.
5.4.3.3(2)(a)

(a) When quenched and tempered steels are to be welded, both the minimum and maximum preheat and interpass temperatures shall be listed for each welding heat input and thickness as shown in Table 12.5.

Part B—Welder, Welding Operator, and Tack Welder Qualification

5.21 General Requirements

Welders, welding operators, and tack welders using SMAW, SAW, GMAW, FCAW, ESW, and EGW welding processes shall be qualified by the tests described in Part B.

12.7.3 Fillet WPS Qualification. Except as provided in 12.7.1, fillet WPSs shall be qualified by groove weld testing in conformance with Clause 5.

12.14 Preheat and Interpass Temperature Control

Preheat and interpass temperature control shall be as specified in 4.2. The minimum preheat and interpass temperature for AASHTO M 270/M 270 (ASTM A709/A709M) Grade 250 [36], 345 [50], 345S [50S], 345W [50W], HPS 345W [HPS 50W], and Grade HPS 485W [HPS 70W] steels shall be as described in Tables 12.3 and 12.4. The minimum and maximum preheat temperatures for M 270/M 270 (A709/A709M) Grade HPS 690W [HPS 100W] steel shall be as described in Table 12.5. For Grade HPS 485W [HPS 70W], the maximum preheat and interpass temperature shall be 230°C [450°F] for all thicknesses.

12.17.6(8)(b)

(b) Grade HPS 690W [HPS 100W] steel shall have a preheat and interpass temperature that conforms to the requirements of Table 12.5 for the heat input used, except that the minimum temperature shall be 110°C [225°F]. Care shall be taken when welding Grade HPS 690W [HPS 100W] steel to ensure that the combined preheat or interpass temperature plus welding heat input does not exceed the manufacturer’s recommendations.

C-12.14 Preheat and Interpass Temperature Control

Tables 12.3, 12.4, and 12.5 for preheat under the Fracture Control Plan have added two additional elements not considered for redundant members: the diffusible hydrogen limit of the weld metal.
limit of the weld metal deposited by various filler metals, and the heat input from welding. The level of required preheat is therefore a function of the type of steel, thickness of steel, hydrogen level of the filler metal, and the heat input from the welding process.

9.7 Doors

9.7.1 In addition to the requirements specified in 5.9, sliding doors on display refrigerators shall be readily removable, or shall be removable and easily cleanable as installed.

9.7.2 Display refrigerators with automatic lockout shall be equipped with:

- an automatic door lock; and
- self-closing door(s); and
- a feature that would allow the door to be unlocked only by an operator/employee or service person.

**NOTE** – door may not be self-closing when opened greater than 90 degree arc to facilitate servicing.

**NOTE** – The self-closing feature of a self-closing door is not required to function when the door is opened to a position beyond a 90-degree arc.

</tr>
</tbody>
</table>

B.5.4 Turbidity reduction test method

a) Determine the volume of water needed to achieve a turnover rate of no greater than 30 min when the filter is operated at the design flow rate. Fill the test tank with the required volume of water.

b) Sample the water in the tank and determine the turbidity level (TB1) in NTU. Add a sufficient quantity of silica #140 to obtain a turbidity level (TB2) of 45 ± 40 ÷ NTU.

c) Install and condition the filter according to the manufacturer's instructions. Operate the filter at the design flow rate.

NSF/ANSI Standard
for Personal Care Products

Personal Care Products Containing Organic Ingredients

7.6 Labeling of non-retail containers used only for shipping or storage of raw or processed agricultural ingredient products

Non-retail containers used to ship or store raw or processed agricultural products labeled as containing organic ingredients shall display:

- production lot number of the product if applicable; and
- name and contact information of the handler/shipper that sold the finished product;
- name and contact information of the agent that certified the handler that assembled the final product;
- identification of the product as organic; and
- if applicable, the phrase "Certified to NSF/ANSI 305." This phrase shall be clearly visible on the container of any ingredients products certified to this Standard.

Non-retail containers used only to ship or store raw or processed ingredients products may display the following:

- the percentage of organic ingredients in the product;
- the statement, "Contains organic (specified ingredients or ingredient groups)," provided that the statement does not list more than three organically produced ingredients;
- name and contact information of the handler/shipper that sold the finished product;
- name of the agent that certified the handler that assembled the final product;
- special handling instructions needed to maintain the organic integrity of the product; and/or
- if applicable, the seal, logo, or other identifying mark of the agent that certified the organic production or handling operation that produced or handled the finished product.

</table>

(d) Where Effective Leakage Area (ELA) is defined in accordance with Equation 4.4 of ASHRAE Standard 62.2-2013, and where \(\text{SLA} = \text{ELA} / \text{CFA}\) (where ELA and CFA are in the same units).

(e) Tested envelope leakage shall be determined and documented by an Approved Tester using the on-site inspection protocol as specified by requirements such as or equivalent to ANSI/RESNET/ICC Standard 380-2016 Section 802 of the Mortgage Industry National Home Energy Rating Systems Standards by an Approved Tester.

(f) The combined air exchange rate for Effective Annual Average Infiltration Rate (cfm) and Whole-House Mechanical Ventilation Systems shall be determined in accordance with Equation 4.6 Section 4.1.2 of ASHRAE Standard 62.2-2013.

(g) Either hourly calculations using the procedures given in the 2013 ASHRAE Handbook of Fundamentals (IP version), Chapter 16, page 16.25, Equation 51 using Shelter Class 4 or calculations yielding equivalent results shall be used to determine the energy loads resulting from infiltration in combination with Whole-House Mechanical Ventilation systems.

(h) Where the measured Effective Annual Average Infiltration Rate determined in accordance with Section 4.1.2 of ASHRAE Standard 62.2-2013 exceeds \(0.02 \times \text{CFA} \text{cfm}\), the minimum time-averaged Whole-House Mechanical Ventilation System rate shall be reduced by 50% of the difference between \(0.02 \times \text{CFA} \text{cfm}\) and the measured Effective Annual Average Infiltration Rate (cfm).

(i) Where Whole-House Mechanical Ventilation is provided by a Central Fan-Integrated System (CFIS), the measured outdoor air flow rate of the CFIS, as determined in accordance with ANSI/RESNET/ICC Standard 380-2016, shall be used to compute the necessary run-time fraction of the CFIS required to achieve the time-averaged Whole-House Mechanical Ventilation system rate.
Renumber all following Table 4.2.2(1) notes.

Modify Section 4.3.3.2.5 as follows:

4.3.3.2.5. Combined infiltration and ventilation may not be less than the ventilation rates required by ASHRAE Standard 62.2-2013, nor greater than nL * wsf * 1.2 in summer and nL * wsf * 1.6 in winter.

Add the following definitions:

**Effective Annual Average Infiltration Rate** – the constant air infiltration rate in cubic feet per minute (cfm) that would result in the same average indoor pollutant concentration over the annual period as occurs under varying infiltration conditions.

**Central Fan-Integrated System** – an outdoor air ventilation system that uses the blower of the Heating, Ventilating and Cooling (HVAC) system to draw outdoor air into the home through a dedicated duct from the outdoors to the return side of the HVAC system’s air handler unit (AHU) for distribution to the conditioned space.
53 Sensitivity Tests of Smoke Sensing Chamber(s)

53.1 The sensitivity of the sensing head or projected beam assembly, employed as a component of an air duct smoke detector, shall comply with the following sections of the Standard for Smoke Detectors for Fire Alarm Signaling Systems, UL 268:

a) Performance Tests:

1) Sensitivity
2) Directionality (where applicable)
3) Lamp Interchangeability (Photoelectric)
4) Reduction in Light Output (Photoelectric)
5) Stability
6) Overvoltage and Undervoltage
7) Vibration
8) Jarring
9) Variable Ambient Temperature
10) Humidity
11) Corrosion
12) Transient
13) Static Discharge
14) Dust
15) Endurance
16) Polarity Reversal
17) Accelerated Aging (Long-Term Stability Test - not required)
18) Temperature Test (Polymeric Materials)
19) Field Service Test

b) Manufacturing and Production Tests:

1) Sensitivity Calibration
2) Smoke
3) Photocell Illuminating Lamp.
