This section solicits public comments on proposed draft new American National Standards, including the national adoption of ISO and IEC standards as American National Standards, and on proposals to revise, reaffirm or withdraw approval of existing American National Standards. A draft standard is listed in this section under the ANSI-accredited standards developer (ASD) that sponsors it and from whom a copy may be obtained. Comments in connection with a draft American National Standard must be submitted in writing to the ASD no later than the last day of the comment period specified herein. Such comments shall be specific to the section(s) of the standard under review and include sufficient detail so as to enable the reader to understand the commenter’s position, concerns and suggested alternative language, if appropriate. Please note that the ANSI Executive Standards Council (ExSC) has determined that an ASD has the right to require that interested parties submit public review comments electronically, in accordance with the developer’s procedures.

Ordering Instructions for “Call-for-Comment” Listings
1. Order from the organization indicated for the specific proposal.
2. Use the full identification in your order, including the BSR prefix; for example, Electric Fuses BSR/SAE J554.
3. Include remittance with all orders.
4. BSR proposals will not be available after the deadline of call for comment.

Comments should be addressed to the organization indicated, with a copy to the Board of Standards Review, American National Standards Institute, 25 West 43rd Street, New York, NY 10036. Fax: 212-840-2298; e-mail: psa@ansi.org

**Revision**

BSR/NSF 49-201x (i92r4), Biosafety Cabinetry: Design, Construction, Performance, and Field Certification (revision of ANSI/NSF 49-2016)

This Standard applies to Class II (laminar flow) biosafety cabinetry designed to minimize hazards inherent in work with agents assigned to biosafety levels 1, 2, 3, or 4. It also defines the tests that shall be passed by such cabinetry to meet this Standard. This Standard includes basic requirements for the design, construction, and performance of biosafety cabinets that are intended to provide personnel, product, and environmental protection; reliable operation; durability and structural stability; cleanliness; limitations on noise level; illumination; vibration; and motor/blower performance.

**NSF (NSF International)**

**Revision**

BSR/NSF 245-201x (i12r2), Wastewater treatment systems - Nitrogen reduction (revision of ANSI/NSF 245-2013)

This wastewater standard contains minimum requirements for residential wastewater treatment systems having rated treatment capacities of 1514 L/d (400 gal/day) to 5678 L/d (1500 gal/day) that are designed to provide reduction of nitrogen in residential wastewater. Management methods for the treated effluent discharged from these systems are not addressed by this Standard.

A system, in the same configuration, must either be demonstrated to have met the Class I requirements of NSF/ANSI 40 or must meet the Class I requirements of NSF/ANSI 40 during concurrent testing for nutrient removal.

Revision

BSR/ASAE S354.7 MONYEAR-201x, Safety for Farmstead Equipment (revision and redesignation of ANSI/ASAE S354.6-NOV2016)

The purpose of this standard is to provide a reasonable degree of personal safety for operators and other persons during normal operation and servicing of farmstead equipment. This standard applies to powered farmstead equipment as defined in paragraph 3.1. This standard does not apply to agricultural field equipment nor to self-propelled mobile equipment such as motor vehicles, all-terrain vehicles, and skid-steer loaders. In addition, it does not apply to farmstead equipment covered by other ASABE safety standards unless it is specifically referenced by these standards.

ASC X9 (Accredited Standards Committee X9, Incorporated)

Revision

BSR X9.111-201x, Penetration Testing within the Financial Services Industry (revision of ANSI X9.111-2011 (R2017))

This standard specifies recommended processes for conducting penetration testing with financial service organizations. This standard describes a framework for specifying, describing and conducting penetration testing, and then relating the results of the penetration testing. This standard allows an entity interested in obtaining penetration testing services to identify the objects to be tested, specify a level of testing to occur, and to set a minimal set of testing expectations. Included in this standard are:

- A conceptual framework for describing penetration testing, including:
  * Roles and responsibilities of participants;
  * Types of penetration test;
  * A generalized penetration testing cycle;
  * General testing methodologies/techniques;
  * Limitations of penetration testing;
- Ranking of methodologies, bases of testing effort (testing levels);
- Engagement and scope of work considerations;
- Test report guidelines;
- Testing requirements:
  * Security of the testing environment;
  * General practices and methodologies;
- Tester expertise.

AWS (American Welding Society)

**Revision**

BSR/AWS B2.1-1.027-201x, Standard Welding Procedure Specification (SWPS) for Self-Shielded Flux Cored Arc Welding of Carbon Steel (M-1 or P -1, Groups 1 and 2) 1/8 through 1/2 inch Thick, E71T-11, As-Welded Condition, Primarily Plate and Structural Applications (revision of ANSI/AWS B2.1-1.027-2011)

This standard contains the essential welding variables for carbon steel in the thickness range of 1/8 inch [3 mm] through 1/2 inch [13 mm], using self-shielded flux-cored arc welding. It cites the base metals and operating conditions necessary to make the weldment, the filler metal specifications, and the allowable joint designs for groove and fillet welds. This SWPS was developed primarily for plate and structural applications.

BSR/CSA N13.52-201x, Personnel Neutron Dosimeters (Neutron Energies Less than 20 MeV) (revision of ANSI N13.52-1999 (R2010))

This standard is designed to provide guidance for routine personal neutron dosimetry. It is applicable for neutrons with energies ranging from thermal to values less than 20 MeV. This standard applies to devices worn by individuals as contrasted with handheld or fixed-area instrumentation. It does not apply to dosimetry necessary for extremity monitoring or for critically accidents. This standard also includes factors governing the use of dosimeters for proper determination of the personal neutron dose equivalent.

TAPPI (Technical Association of the Pulp and Paper Industry)

**New Standard**

BSR/TAPPI T 536 om-201x, Resistance of paper to passage of air (high-pressure Gurley method) (new standard)

This method is used to measure the air resistance of approximately 6.4 sq. cm. (1 sq. in.) circular area of paper using a pressure differential of approximately 3 kPa. The recommended range of this instrument is for papers that require 10 or more seconds for 10 mL of air to pass through. Refer to the manufacturer's instructions for the upper range limits. For more permeable papers, other techniques are preferable. Instruments are available with automatic timing devices.

Call for Members (ANS Consensus Bodies)

Call for Committee Members

ASC O1 – Safety Requirements for Woodworking Machinery

Are you interested in contributing to the development and maintenance of valuable industry safety standards? The ASC O1 is currently looking for members in the following categories:

- General Interest
- Government
- Producer
- User

If you are interested in joining the ASC O1, contact WMMA Associate Director Jennifer Miller at jennifer@wmma.org.
### Final Actions on American National Standards

The standards actions listed below have been approved by the ANSI Board of Standards Review (BSR) or by an ANSI-Audited Designator, as applicable.

BHMA (Builders Hardware Manufacturers Association)

New Standard
* ANSI/BHMA A156.41-2017, Door Hardware Single Motion to Egress (new standard): 12/12/2017

Revision
* ANSI/BHMA A156.20-2017, Strap and Tee Hinges, and Hasps (revision of ANSI/BHMA A156.20-2012): 12/12/2017

CSA (CSA Group)

Revision

HL7 (Health Level Seven)

Reaffirmation

HPS (ASC N43) (Health Physics Society)

Reaffirmation
ANSI N43.3-2008 (R2018), General Radiation Safety - Installations Using Non-Medical X-Ray and Sealed Gamma-Ray Sources, Energies up to 10 MeV (reaffirmation of ANSI N43.3-2008): 12/12/2017

ICC (International Code Council)

Revision

IEEE (Institute of Electrical and Electronics Engineers)

New Standard
ANSI/IEEE 1653.1-2016, Standard for Traction Power Transformers for Substation Applications up to 1500 Volts DC Nominal Output (new standard): 12/14/2017
ANSI/IEEE 11073-10422-2016, Health informatics - Personal health device communication - Part 10422: Device Specialization - Urine Analyzer (new standard): 12/14/2017

ITI (INCITS) (InterNational Committee for Information Technology Standards)

Reaffirmation

INCITS 482-2012 [R2017], Information technology - ATA/ATAPI Command Set - 2 (ACS-2) (reaffirmation of INCITS 482-2012): 12/14/2017

INCITS 493-2012 [R2017], Information Technology - AT Attachment-8 - Serial Transport (ATA8-AST) (reaffirmation of INCITS 493-2012): 12/14/2017

Revision

Withdrawal

INCITS 361-2002 [R2012], Information Technology - AT Attachment with Packet Interface - 6 (ATA/ATAPI-6) (withdrawal of INCITS 361-2002 [R2012]): 12/14/2017

VC (ASC Z80) (The Vision Council)

Reaffirmation

ANSI Z80.11-2012 (R2017), Laser Systems for Corneal Reshaping (reaffirmation of ANSI Z80.11-2012): 12/11/2017

Revision

* ANSI Z80.31-2017, Ophthalmic Optics - Specifications for Ready-to-Wear Near-Vision Spectacles (revision of ANSI Z80.31-2012): 12/12/2017

VITA (VMEbus International Trade Association (VITA))

New Standard

ANSI/VITA 67.3-2017, Coaxial Interconnect on VPX, Spring-Loaded Contact on Backplane (new standard): 12/11/2017

Reaffirmation

UL (Underwriters Laboratories, Inc.)

Reaffirmation

**Project Initiation Notification System (PINS)**

ANSI Procedures require notification of ANSI by ANSI-accredited standards developers (ASD) of the initiation and scope of activities expected to result in new or revised American National Standards (ANS). Early notification of activity intended to reaffirm or withdraw an ANS and in some instances a PINS related to a national adoption is optional. The mechanism by which such notification is given is referred to as the PINS process. For additional information, see clause 2.4 of the ANSI Essential Requirements: Due Process Requirements for American National Standards.

Following is a list of proposed actions and new ANS that have been received recently from ASDs. Please also review the section in Standards Action entitled "American National Standards Maintained Under Continuous Maintenance" for additional or comparable information with regard to standards maintained under the continuous maintenance option. Use the following Public Document Library url to access PDF & EXCEL reports of approved & proposed ANS.

**List of Approved and Proposed ANS**

Directly and materially affected interests wishing to receive more information or to submit comments are requested to contact the standards developer directly within 30 days of the publication of this announcement.

**AISC (American Institute of Steel Construction)**

*Contact:* Cynthia Duncan, (312) 670-5410, duncan@aisc.org

BSR/AISC N690-201x, Specification for Safety-Related Steel Structures for Nuclear Facilities (revision of ANSI/AISC N690-2012)

Stakeholders: Structural engineers, steel fabricators, steel erectors, construction managers, building owners.

**Project Need:** Update the standard for the use in the design and construction of safety-related steel structures.

This standard applies to the design of safety-related steel structures and steel elements in nuclear facilities. Structures and structural elements subject to this standard are those steel structures that are part of a safety-related system or that support, house, or protect safety-related systems or components, the failure of which would impair the safety-related functions of these systems or components.

**AMCA (Air Movement and Control Association)**

*Contact:* Erin Moore, (847) 704-6285, emoore@amca.org

* BS/AMCA 550-201x, Test Method for High Velocity Wind Driven Rain Resistant Louvers (revision of ANSI/AMCA 550-15)

Stakeholders: Louver manufacturers, builders, product consumers, regulatory bodies.

**Project Need:** This standard establishes uniform laboratory test methods and minimum performance ratings for water rejection capabilities of louvers intended to be used in high-velocity wind conditions.

Tests conducted in accordance with the requirements of this standard are intended to demonstrate the acceptability of the louver in which water infiltration must be kept to manageable amounts during a high-velocity wind-driven rain event. The test specimen can be approved in either an open or closed position, as stated in Section 5.

**AMCI (AMC Institute)**

*Contact:* Erin Carter, (703) 570-8954, ecarter@amcinstitute.org

BSR/AMCI A100.1-201x, AMC Standard of Good Practice (revision of ANSI/AMCI A100.1-2014)

Stakeholders: AMC owners/senior executive staff, association volunteer leaders, advisors, general interest.

**Project Need:** AMC Institute operates under periodic maintenance (five years from the date of the last approval as an ANS).

The AMC Institute Standard establishes requirements that provide a measurement for practices that can be utilized by all sizes and types of Association Management Companies (AMCs) in order to enhance the performance of the AMC and their staff.

**ANS (American Nuclear Society)**

*Contact:* Kathryn Murdoch, (708) 579-8268, kmurdoch@ans.org

BSR/ANS 8.1-201x, Nuclear Criticality Safety in Operations with Fissile Material Outside Reactors (revision of ANSI/ANS 8.1-2014)

Stakeholders: Government and commercial facilities that process, store, transport, and handle significant amounts of fissile material outside reactors.

**Project Need:** The need for a revision is due to requests from the community for the inclusion of new subcritical (SCL) limits. The new subcritical limits will include at a minimum SCLs for uranium and uranium compounds for enrichments up to 20 wt.% U-235. Other Pu/U SCLs will be considered for inclusion. These compounds have not yet been selected. Lessons-learned and comments received since the 2014 revision was approved and will be considered for incorporation. In addition, recommendations may be related to the applicability of ANS 8.1 for the purposes of considering natural phenomena in process analysis, which will be considered for inclusion.

This standard is applicable to operations with fissionable materials outside nuclear reactors, except for the assembly of these materials under controlled conditions, such as in critical experiments. Generalized basic criteria are presented, and limits are specified for some single fissionable units of simple shape containing 233U, 235U, or 239Pu, but not for multiunit arrays. Subcritical limits for certain multiunit arrays are contained in ANSI/ANS 8.7-1998 (R2012). Requirements are stated for validation of any calculational method used in assessing nuclear criticality safety.
ASABE (American Society of Agricultural and Biological Engineers)

Contact: Jean Walsh, (269) 932-7027, wolson@asabe.org

BSR/ASAE D241.5 MONYEAR-201x, Density, Specific Gravity, and Mass-Moisture Relationships of Grain for Storage (revision and redesignation of BSR/ASAE D241.5 MONYEAR-201x)

Stakeholders: Engineers working in the grain, feed, food, and bioprocessing industries. Experts needed from this project should be from Industry. No experts from Academia and Research are needed.

Project Need: Update data, figures and tables.

Data relating to density, specific gravity, and mass-moisture relationships of grain for storage.

ASME (American Society of Mechanical Engineers)

Contact: Mayra Santiago, (212) 591-8521, ansisbox@asme.org

BSR/ASME B89.1.17-201x, Measurement of Thread Measuring Wires (revision of ANSI/ASME B89.1.17-2001 (R2017))

Stakeholders: Manufacturers, testing facilities, automotive, and aerospace.

Project Need: The standard is being revised to bring it up to date with current business practices.

This Standard is intended to establish uniform practices for the measurement of thread-measuring wires. The standard includes methods for the direct measurement of both master and working wires and methods for the comparison measurement of working wires.

ASTM (ASTM International)

Contact: Corice Leonard, (610) 832-9744, accreditation@astm.org

BSR/ASTM WK61305-201x, New Practice for Specimen Preparation and Mounting of Plastic Composites for Use as Deck Boards, Stair Treads, Guards or Handrails to Assess Surface Burning Characteristics (new standard)

Stakeholders: Surface Burning industry.

Project Need: This Practice describes a procedure for specimen preparation and mounting when testing plastic composite materials for use as deck boards, stair treads, guards or handrails to assess flame spread index as a surface burning characteristic using Test Method E84. 1.2.

https://www.astm.org/DATABASE.CART/WORKITEMS/WK61305.htm

BSR/ASTM WK61399-201x, New Practice for Liquefied Natural Gas (LNG) Bunkering Hose Transfer Assembly (new standard)

Stakeholders: Machinery and Piping Systems industry.

Project Need: This practice covers the minimum requirements for the design, production, deployment, and manufacture of bunker hose transfer assemblies for cryogenic service pertaining to bunkering of liquefied natural gas (LNG)-fueled vessels. The bunker hose transfer assemblies addressed by this practice are for connections between the LNG-fueled vessel bunker manifold presentation flange connections and the LNG supplier bunkering manifold presentation flange connections.

https://www.astm.org/DATABASE.CART/WORKITEMS/WK61399.htm

AWC (American Wood Council)

Contact: Bradford Douglas, (202) 463-2770, bdouglas@awc.org

BSR/AWC SDPWS-201x, Special Design Provisions for Wind and Seismic (revision of ANSI/AWC SDPWS-2015)

Stakeholders: Engineers, architects, builders, and regulators.

Project Need: Revise current version of SDPWS-2015.

Provides special design and construction requirements for wind and seismic design of wood structures.

MHI (Material Handling Industry)

Contact: Patrick Davison, (704) 714-8755, pdavison@mhi.org

BSR MH16.1-2012 (R201x), Design, Testing and Utilization of Industrial Steel Storage Racks (reaffirmation of ANSI MH16.1-2012)

Stakeholders: Storage rack manufacturers, users, and regulators.

Project Need: Provide guidance on the design and installation of industrial steel storage racks, and to align requirements to applicable building codes. The standard applies to industrial pallet racks, movable shelf racks, and stacker racks made of cold-formed or hot-rolled steel structural members. It does not apply to other types of racks, such as drive-in or drive-through racks, cantilever racks, portable racks, etc., or to racks made of material other than steel.

Stakeholders: Industrial shelving manufacturers, installers, users, and regulators.

Project Need: Provide design and installation requirements for industrial boltless metal-wood shelving.

This standard applies to industrial steel boltless shelving; boltless shelving placed on mobile carriages; multi-level boltless shelving systems such as pick modules, catwalks, and deck-overs (dance floor); and for boltless shelving used in conjunction with an automated storage and retrieval system (AS/RS).

The structural framing components for these systems are made of cold-formed or hot-rolled steel structural members. This standard does not apply to the following: boltless shelving whose shelving components are not fabricated from steel, industrial steel bin shelving, or shelving systems built with slotted metal angle.

BSR MH29.1-201X, Safety Requirements for Industrial Scissors Lifts (revision of ANSI MH29.1-2012)

Stakeholders: Manufacturers, users, and regulators associated with industrial scissors lifts.

Project Need: Mobile and stationary industrial scissors lifts raise, lower and position materials and personnel in various applications but are different from other conveyances such as aerial work platforms (AWP) and elevators. In an effort to be referenced in the International Building Code (IBC) along with conveying systems and elevators, MH29.1 has been revised to better illustrate that personnel operate and may themselves be raised or lowered by industrial scissors lifts.

This standard applies to industrial scissors lifts that are raised and lowered by means of hydraulic, pneumatic, or mechanical actuation. These industrial scissors lifts are intended for commercial applications on firm and level surfaces and may be either stationary or mobile and used to position, feed, transfer, load, or unload materials and/or personnel.

VITA (VMEbus International Trade Association (VITA))

Contact: Jing Kwok, (602) 281-4497, jing.kwok@vita.com

BSR/VITA 47.2-201X, Class 2 Requirements for Environments, Design and Construction, Safety, and Quality for VITA 47 Plug-In Modules Dot Standards (new standard)

Stakeholders: Manufacturers, suppliers, and users of modular embedded computers.

Project Need: Develop a standard for standardizing Class 2 environmental factors for embedded computers.

This standard defines the unique environments, design and construction, safety, and quality for plug-in module requirements related to products meant to align with the applications defined in IPC J-STD-001, Class 2.

BSR/VITA 47.3-201X, Class 3 Requirements for Environments, Design and Construction, Safety, and Quality for VITA 47 Plug-In Modules Dot Standard (new standard)

Stakeholders: Manufacturers, suppliers, and users of modular embedded computers.

Project Need: Develop a standard for standardizing Class 3 environmental factors for embedded computers.

This standard documents the unique environments, design and construction, safety, and quality for plug-in module requirements related to products meant to align with the applications defined in IPC J-STD-001, Class 3.
American National Standards Maintained Under Continuous Maintenance

The ANSI Essential Requirements: Due Process Requirements for American National Standards provides two options for the maintenance of American National Standards (ANS): periodic maintenance (see clause 4.7.1) and continuous maintenance (see clause 4.7.2). Continuous maintenance is defined as follows:

The standard shall be maintained by an accredited standards developer. A documented program for periodic publication of revisions shall be established by the standards developer. Processing of these revisions shall be in accordance with these procedures. The published standard shall include a clear statement of the intent to consider requests for change and information on the submittal of such requests. Procedures shall be established for timely, documented consensus action on each request for change and no portion of the standard shall be excluded from the revision process. In the event that no revisions are issued for a period of four years, action to reaffirm or withdraw the standard shall be taken in accordance with the procedures contained in the ANSI Essential Requirements.

The Executive Standards Council (ExSC) has determined that for standards maintained under the Continuous Maintenance option, separate PINS announcements are not required. The following ANSI Accredited Standards Developers have formally registered standards under the Continuous Maintenance option:

- AAMI (Association for the Advancement of Medical Instrumentation)
- AARST (American Association of Radon Scientists and Technologists)
- AGA (American Gas Association)
- AGSC-AGRSS (Auto Glass Safety Council)
- ASC X9 (Accredited Standards Committee X9, Incorporated)
- ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.)
- ASME (American Society of Mechanical Engineers)
- ASTM (ASTM International)
- GBI (Green Building Initiative)
- HL7 (Health Level Seven)
- IES (Illuminating Engineering Society)
- MHI (Material Handling Industry)
- NAHBRC (NAHB Research Center, Inc.)
- NBBPVI (National Board of Boiler and Pressure Vessel Inspectors)
- NCPDP (National Council for Prescription Drug Programs)
- NEMA (National Electrical Manufacturers Association)
- NISO (National Information Standards Organization)
- NSF (NSF International)
- PRCA (Professional Ropes Course Association)
- RESNET (Residential Energy Services Network, Inc.)
- SAE (SAE International)
- TCNA (Tile Council of North America)
- TIA (Telecommunications Industry Association)
- UL (Underwriters Laboratories, Inc.)

To obtain additional information with regard to these standards, including contact information at the ANSI Accredited Standards Developer, please visit ANSI Online at www.ansi.org/asd, select “Standards Activities,” click on “Public Review and Comment” and “American National Standards Maintained Under Continuous Maintenance.” This information is also available directly at www.ansi.org/publicreview

Alternatively, you may contact the Procedures & Standards Administration department (PSA) at rsa@ansi.org or via fax at 212-840-2298. If you request that information be provided via E-mail, please include your E-mail address; if you request that information be provided via fax, please include your fax number. Thank you.
ANSI-Accredited Standards Developers Contact Information

The addresses listed in this section are to be used in conjunction with standards listed in PINS, Call for Comment and Final Actions. This section is a list of developers who have submitted standards for this issue of Standards Action – it is not intended to be a list of all ANSI-Accredited Standards Developers. Please send all address corrections to Standards Action Editor at standact@ansi.org.

ISO & IEC Draft International Standards

This section lists proposed standards that the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC) are considering for approval. The proposals have received substantial support within the technical committees or subcommittees that developed them and are now being circulated to ISO and IEC members for comment and vote. Standards Action readers interested in reviewing and commenting on these documents should order copies from ANSI.

Comments
Comments regarding ISO documents should be sent to ANSI's ISO Team (isol@ansi.org); comments on IEC documents must be submitted electronically in the approved ISO template and as a Word document as other formats will not be accepted.

ISO Standards

AGRICULTURAL FOOD PRODUCTS (TC 34)
ISO 11133/DAmd2, Microbiology of food, animal feed and water - Preparation, production, storage and performance testing of culture media - Amendment 2 - 1/5/2018, $53.00
ISO/DIS 20613, Sensory Analysis - General guidance for the application of sensory analysis in quality control - 3/4/2018, $58.00
ISO/DIS 22117, Microbiology of the food chain - Specific requirements and guidance for proficiency testing by interlaboratory comparison - 3/3/2018, $98.00
ISO/DIS 16140-6, Microbiology of the food chain - Method validation - Part 6: Protocol for the validation of alternative (proprietary) methods for microbiological confirmation and typing procedures - 1/8/2018, $88.00

AIRCRAFT AND SPACE VEHICLES (TC 20)
ISO/DIS 11076, Aircraft - De-icing/anti-icing methods on the ground - 3/1/2018, $40.00

CAST IRON AND PIG IRON (TC 25)
ISO/DIS 945-4, Microstructure of cast irons - Part 4: Test method for evaluating nodularity in spheroidal graphite cast irons - 3/1/2018, $82.00

ENVIRONMENTAL MANAGEMENT (TC 207)
ISO/DIS 14008, Monetary valuation of environmental impacts and related environmental aspects - Principles, requirements and guidelines - 1/6/2018, $107.00

FREIGHT CONTAINERS (TC 104)

IMPLANTS FOR SURGERY (TC 150)
ISO/DIS 22622, Implants for surgery - Wear of total ankle-joint prostheses - Loading and displacement parameters for wear-testing machines with load or displacement control and corresponding environmental conditions for test - 3/5/2018, $82.00

INDUSTRIAL AUTOMATION SYSTEMS AND INTEGRATION (TC 184)

LEATHER (TC 120)
ISO/DIS 11457, Leather - Grading of wet blue goat and sheep skins based on defects - 3/3/2018, $46.00

MATERIALS, EQUIPMENT AND OFFSHORE STRUCTURES FOR PETROLEUM AND NATURAL GAS INDUSTRIES (TC 67)
ISO/DIS 23251, Petroleum, petrochemical and natural gas industries - Pressure-relieving and depressuring systems - 11/5/2006, $46.00

MECHANICAL VIBRATION AND SHOCK (TC 108)
ISO/DIS 20816-4, Mechanical vibration - Measurement and evaluation of machine vibration - Part 4: Gas turbines in excess of 3 MW, with fluid-film bearings - 1/4/2018, $82.00

NUCLEAR ENERGY (TC 85)
ISO/DIS 28057, Clinical dosimetry - Dosimetry with solid thermoluminescence detectors for photon and electron radiations in radiotherapy - 3/5/2018, $112.00
ISO/DIS 16638-2, Radiological protection - Monitoring and internal dosimetry for specific materials - Part 2: Ingestion of uranium compounds - 3/9/2018, $98.00

PERSONAL SAFETY - PROTECTIVE CLOTHING AND EQUIPMENT (TC 94)
ISO/DIS 374-2, Protective gloves against dangerous chemicals and micro-organisms - Part 2: Determination of resistance to penetration - 3/2/2018, $40.00

Those regarding IEC documents should be sent to Tony Zertuche, General Secretary, USNC/IEC, at ANSI's New York offices (tzertuche@ansi.org). The final date for offering comments is listed after each draft.

Ordering Instructions
ISO and IEC Drafts can be made available by contacting ANSI's Customer Service department. Please e-mail your request for an ISO or IEC Draft to Customer Service at sales@ansi.org. When making your request, please provide the date of the Standards Action issue in which the draft document you are requesting appears.
ISO/DIS 374-4, Protective gloves against chemicals and microorganisms - Part 4: Determination of resistance to degradation by chemicals - 3/2/2018, $53.00

PLASTICS (TC 61)

ISO/DIS 15314, Plastics - Methods for marine exposure - 12/24/2028, $58.00

ISO/DIS 21306-1, Plastics - Unplasticized poly(vinyl chloride) (PVC-U) moulding and extrusion materials - Part 1: Designation system and basis for specifications - 3/2/2018, $40.00

ISO/DIS 21306-2, Plastics - Unplasticized poly(vinyl chloride) (PVC-U) moulding and extrusion materials - Part 2: Preparation of test specimens and determination of properties - 3/2/2018, $40.00

QUALITY MANAGEMENT AND QUALITY ASSURANCE (TC 176)

ISO/DIS 18091, Quality management systems - Guidelines for the application of ISO 9001 in local government - 3/4/2018, $146.00

ROAD VEHICLES (TC 22)

ISO/DIS 15118-1, Road vehicles - Vehicle to grid communication interface - Part 1: General information and use-case definition - 1/4/2018, $165.00

ISO/DIS 22241-2, Diesel engines - NOx reduction agent AUS 32 - Part 2: Test methods - 3/2/2018, $125.00

RUBBER AND RUBBER PRODUCTS (TC 45)

ISO/DIS 4661-2, Rubber, vulcanized - Preparation of samples and test pieces - Part 2: Chemical tests - 3/8/2018, $33.00

SAFETY OF MACHINERY (TC 199)

ISO/DIS 13851, Safety of machinery - Two-hand control devices - Functional aspects and design principles - 12/6/2005, $82.00

ISO/DIS 13857, Safety of machinery - Safety distances to prevent hazard zones being reached by upper and lower limbs - 1/4/2018, $77.00

SERVICE ACTIVITIES RELATING TO DRINKING WATER SUPPLY SYSTEMS AND WASTEWATER SYSTEMS - QUALITY CRITERIA OF THE SERVICE AND PERFORMANCE INDICATORS (TC 224)

ISO/DIS 24516-2, Guidelines for the management of assets of water supply and wastewater systems - Part 2: Waterworks including treatment, pumping and storage 9 (also in the networks) - 3/3/2018, $125.00

ISO/DIS 24516-4, Guidelines for the management of assets of water supply and wastewater systems - Part 4: Wastewater treatment plants (including pumping and sludge treatment) - 3/3/2018, $134.00

SHIPS AND MARINE TECHNOLOGY (TC 8)

ISO/DIS 25862, Ships and marine technology - Marine magnetic compasses, binnacles and azimuth reading devices - 3/3/2018, $125.00

STEEL (TC 17)

ISO/DIS 24945, Steel - Determination of nitrogen - Spectrophotometric method - 1/6/2018, $58.00

ISO/DIS 20915, Life cycle inventory calculation methodology for steel products - 1/5/2018, $98.00

TERMINOLOGY (PRINCIPLES AND COORDINATION) (TC 37)

ISO/DIS 22259, Conference systems - Equipment - Requirements - 3/10/2018, $93.00

TRADITIONAL CHINESE MEDICINE (TC 249)

ISO/DIS 21314, Traditional Chinese medicine - Salvia miltiorrhiza root and rhizome - 3/4/2018, $71.00

TYRES, RIMS AND VALVES (TC 31)

ISO/DIS 20909, Radio frequency identification (RFID) tyre tags - 1/7/2018, $46.00

ISO/DIS 20910, Coding for radio frequency identification (RFID) tyre tags - 1/7/2018, $58.00

IEC Standards

14/946/CD, IEC 60076-19 ED1: Power transformers - Part 19: Rules for the determination of uncertainties in the measurement of the losses on power transformers and reactors, 018/3/9/

17C/674/CD, IEC 62271-213 ED1: High-voltage switchgear and controlgear - Part 213: Voltage detecting and indicating system, 018/3/9/

21/953/CD, IEC 60095-7 ED1: Lead-acid starter batteries - Part 7: General requirements and methods of test for motorcycle batteries, 018/2/9/

23E/1042/FDIS, IEC 62955 ED1: Residual Direct Current Detecting Device (RDC-DD) to be used for Mode 3 charging of Electric Vehicle, 2018/1/26

23G/393/FDIS, IEC 60799 ED3: Electrical accessories - Cord sets and interconnection cord sets, 2018/1/26

23H/389B/CD, IEC 62196-1 ED4: Plugs, socket-outlets, vehicle connectors and vehicle inlets - Conductive charging of electric vehicles - Part 1: General requirements, 2018/1/26

32B/675/CD, IEC 60269-7 ED1: Low-voltage fuses - Part 7: Fuse links for the protection of batteries, 018/3/9/

34/476/FDIS, IEC 62504/AM1 ED1: Amendment 1 - General lighting - Light emitting diode (LED) products and related equipment - Terms and definitions, 2018/1/26

34A/2051/FDIS, IEC 61167 ED4: Metal halide lamps - Performance specification, 2018/1/26

Newly Published ISO & IEC Standards

Listed here are new and revised standards recently approved and promulgated by ISO - the International Organization for Standardization – and IEC – the International Electrotechnical Commission. Most are available at the ANSI Electronic Standards Store (ESS) at www.ansi.org. All paper copies are available from Standards resellers (http://webstore.ansi.org/faq.aspx#resellers).

ISO Standards

ACOUSTICS (TC 43)
ISO 389-1:2017, Acoustics - Reference zero for the calibration of audiometric equipment - Part 1: Reference equivalent threshold sound pressure levels for pure tones and supra-aural earphones, $68.00

ANAESTHETIC AND RESPIRATORY EQUIPMENT (TC 121)
ISO 7396-1/Amd1:2017, Medical gas pipeline systems - Part 1: Pipeline systems for compressed medical gases and vacuum - Amendment 1, $19.00
ISO 80601-2-61:2017, Medical electrical equipment - Part 2-61: Particular requirements for basic safety and essential performance of pulse oximeter equipment, $232.00

CAST IRON AND PIG IRON (TC 25)
ISO 945-1:2017, Microstructure of cast irons - Part 1: Graphite classification by visual analysis, $162.00

CORROSION OF METALS AND ALLOYS (TC 156)
ISO 11130:2017, Corrosion of metals and alloys - Alternate immersion test in salt solution, $68.00

CROSS-BORDER TRADE OF SECOND-HAND GOODS (TC 245)
ISO 20245:2017, Cross-border trade of second-hand goods, $68.00

DIMENSIONAL AND GEOMETRICAL PRODUCT SPECIFICATIONS AND VERIFICATION (TC 213)
ISO 17450-4:2017, Geometrical product specifications (GPS) - Basic concepts - Part 4: Geometrical characteristics for quantifying GPS deviations, $103.00

ENVIRONMENTAL MANAGEMENT (TC 207)
ISO 14044/Amd1:2017, Environmental management - Life cycle assessment - Requirements and guidelines - Amendment 1, $19.00

FERTILIZERS AND SOIL CONDITIONERS (TC 134)
ISO 21263:2017, Slow-release fertilizers - Determination of the release of the nutrients - Method for coated fertilizers, $68.00

GEOTECHNICS (TC 182)
ISO 14688-1:2017, Geotechnical investigation and testing - Identification, description and classification of rock, $138.00
ISO 14688-2:2017, Geotechnical investigation and testing - Identification and classification of soil - Part 2: Principles for a classification, $68.00

ISO 2108:2017, Information and documentation - Interlibrary Loan Transactions, $162.00

MECHANICAL TESTING OF METALS (TC 164)
ISO 4545-2:2017, Metallic materials - Knoop hardness test - Part 2: Verification and calibration of testing machines, $103.00

NON-DESTRUCTIVE TESTING (TC 135)
ISO 20486:2017, Non-destructive testing - Leak testing - Calibration of reference leaks for gases, $162.00

OTHER
ISO 20701:2017, Leather - Tests for colour fastness - Colour fastness to saliva, $45.00

PETROLEUM PRODUCTS AND LUBRICANTS (TC 28)
ISO 5165:2017, Petroleum products - Determination of the ignition quality of diesel fuels - Cetane engine method, $138.00
ISO 20623:2017, Petroleum and related products - Determination of the extreme-pressure and anti-wear properties of lubricants - Four-ball method (European conditions), $103.00

ROLLING BEARINGS (TC 4)
ISO 20056-1:2017, Rolling bearings - Load ratings for hybrid bearings with rolling elements made of ceramic - Part 1: Dynamic load ratings, $103.00
ISO 20056-2:2017, Rolling bearings - Load ratings for hybrid bearings with rolling elements made of ceramic - Part 2: Static load ratings, $103.00

RUBBER AND RUBBER PRODUCTS (TC 45)
ISO 10619-1:2017, Rubber and plastics hoses and tubing - Measurement of flexibility and stiffness - Part 1: Bending tests at ambient temperature, $68.00

SUSTAINABLE DEVELOPMENT IN COMMUNITIES (TC 268)
ISO 37153:2017, Smart community infrastructures - Maturity model for assessment and improvement, $138.00

TRACTORS AND MACHINERY FOR AGRICULTURE AND FORESTRY (TC 23)
Standards Action - December 22, 2017 - Page 25 of 51 pages

ISO 11783-1:2017, Tractors and machinery for agriculture and forestry - Serial control and communications data network - Part 1: General standard for mobile data communication, $138.00

TRADITIONAL CHINESE MEDICINE (TC 249)
ISO 20759:2017, Traditional Chinese medicine - Artemisia argyi leaf, $103.00

WATER QUALITY (TC 147)
ISO 7393-2:2017, Water quality - Determination of free chlorine and total chlorine - Part 2: Colorimetric method using N,N-dialkyl-1,4-phenylenediamine, for routine control purposes, $138.00

WELDING AND ALLIED PROCESSES (TC 44)
ISO 26304:2017, Welding consumables - Solid wire electrodes, tubular cored electrodes and electrode-flux combinations for submerged arc welding of high strength steels - Classification, $138.00

ISO Technical Reports

GEARS (TC 60)

ISO Technical Specifications

AGRICULTURAL FOOD PRODUCTS (TC 34)
ISO/TS 19657-2017, Definitions and technical criteria for food ingredients to be considered as natural, $45.00

ISO/IEC JTC 1, Information Technology

ISO/IEC 30107-2:2017, Information technology - Biometric presentation attack detection - Part 2: Data formats, $103.00

IEC Standards

ALARM SYSTEMS (TC 79)
IEC 62820-3-1 Ed. 1.0 b:2017, Building intercom systems - Part 3-1: Application guidelines - General, $117.00

CABLES, WIRES, WAVEGUIDES, R.F. CONNECTORS, AND ACCESSORIES FOR COMMUNICATION AND SIGNALLING (TC 46)
IEC 62810 Ed. 1.0 b:2015, Cylindrical cavity method to measure the complex permittivity of low-loss dielectric rods, $117.00

CAPACITORS AND RESISTORS FOR ELECTRONIC EQUIPMENT (TC 40)
IEC 62391-1 Ed. 2.0 b:2015, Fixed electric double-layer capacitors for use in electric and electronic equipment - Part 1: Generic specification, $317.00

ELECTRIC CABLES (TC 20)
IEC 62930 Ed. 1.0 en:2017, Electric cables for photovoltaic systems with a voltage rating of 1,5 kV DC, $199.00

ELECTRICAL APPARATUS FOR EXPLOSIVE ATMOSPHERES (TC 31)
IEC 60079-0 Ed. 7.0 b:2017, Explosive atmospheres - Part 0: Equipment - General requirements, $387.00
IEC 60079-29-1 Ed. 2.0 b:2016, Explosive atmospheres - Part 29-1: Gas detectors - Performance requirements of detectors for flammable gases, $281.00
IEC 60079-29-2 Ed. 2.0 b:2015, Explosive atmospheres - Part 29-2: Gas detectors - Selection, installation, use and maintenance of detectors for flammable gases and oxygen, $375.00
S+ IEC 60079-0 Ed. 7.0 en:2017 (Redline version), Explosive atmospheres - Part 0: Equipment - General requirements, $503.00
IEC/IEEE 60079-30-2 Ed. 1.0 b:2015, Explosive atmospheres - Part 30-2: Electrical resistance trace heating - Application guide for design, installation and maintenance, $352.00

ELECTRICAL ENERGY STORAGE (EES) SYSTEMS (TC 120)
IEC 62933-2-1 Ed. 1.0 b:2017, Electrical energy storage (EES) systems - Part 2-1: Unit parameters and testing methods - General specification, $281.00

ELECTROSTATICS (TC 101)
IEC 61340-4-3 Ed. 2.0 b:2017, Electrostatics - Part 4-3: Standard test methods for specific applications - Footwear, $47.00

FIBRE OPTICS (TC 86)
IEC 61281-1 Ed. 2.0 b:2017, Fibre optic communication subsystems - Part 1: Generic specification, $235.00
IEC 61754-7-2 Ed. 1.0 en:2017, Fibre optic interconnecting devices and passive components - Fibre optic connector interfaces - Part 7 -2: Type MPO connector family - Two fibre rows, $235.00
IEC 61757-1-1 Ed. 1.0 b:2016, Fibre optic sensors - Part 1-1: Strain measurement - Strain sensors based on fibre Bragg gratings, $281.00
IEC 60793-1-30 Ed. 2.0 b:2010, Optical fibres - Part 1-30: Measurement methods and test procedures - Fibre proof test, $82.00
IEC 61755-3-10 Ed. 1.0 b:2016, Fibre optic interconnecting devices and passive components - Connector optical interfaces - Part 3-10: Connector parameters of non-dispersion shifted single mode physically contacting fibres - Non-angled, ferrule-less, bore alignment connectors, $47.00

HYDRAULIC TURBINES (TC 4)
IEC 62256 Ed. 2.0 b:2017, Hydraulic turbines, storage pumps and pump-turbines - Rehabilitation and performance improvement, $410.00

INSTRUMENT TRANSFORMERS (TC 38)
IEC 61869-10 Ed. 1.0 b:2017, Instrument transformers - Part 10: Additional requirements for low-power passive current transformers, $281.00
IEC 61869-11 Ed. 1.0 b:2017, Instrument transformers - Part 11: Additional requirements for low power passive voltage transformers, $235.00

INSULATING MATERIALS (TC 15)
IEC 60370 Ed. 2.0 b:2017, Test procedure for thermal endurance of insulating resins and varnishes for impregnation purposes - Electric breakdown methods, $117.00
Standards Action - December 22, 2017 - Page 26 of 51 pages

IEC 62396-2 Ed. 2.0 en:2017, Process management for avionics - Atmospheric radiation effects - Part 2: Guidelines for single event effects testing for avionics systems, $281.00

IEC 60034-27-1 Ed. 1.0 b:2017, Rotating electrical machines - Part 27 -1: Off-line partial discharge measurements on the winding insulation, $352.00

SAFETY OF HAND-HELD MOTOR-OPERATED ELECTRIC TOOLS (TC 116)
IEC 62841-4-2 Ed. 1.0 b:2017, Electric motor-operated hand-held tools, transportable tools and lawn and garden machinery - Safety - Part 4-2: Particular requirements for hedge trimmers, $352.00
IEC 62841-2-14 Ed. 1.0 b:2015, Electric motor-operated hand-held tools, transportable tools and lawn and garden machinery - Safety - Part 2-14: Particular requirements for hand-held planers, $117.00
IEC 62841-3-10 Ed. 1.0 b:2015, Electric motor-operated hand-held tools, transportable tools and lawn and garden machinery - Safety - Part 3-10: Particular requirements for transportable cut-off machines, $199.00
IEC 60335-2-107 Ed. 2.0 b:2017, Household and similar electrical appliances - Safety - Part 2-107: Particular requirements for robotic battery powered electrical lawn mowers, $375.00

SEMICONDUCTOR DEVICES (TC 47)
IEC 62969-1 Ed. 1.0 en:2017, Semiconductor devices - Semiconductor optical amplifiers (SOAs), $164.00
IEC 62969-9 Ed. 2.0 b:2017, Semiconductor devices - Semiconductor interface for automotive vehicles - Part 1: General requirements of power interface for automotive vehicle sensors, $82.00
IEC 60749-12 Ed. 1.0 b:2015, Semiconductor devices - Mechanical and climatic test methods - Part 12: Vibration, variable frequency, $23.00

SURFACE MOUNTING TECHNOLOGY (TC 91)
IEC 60194-2 Ed. 1.0 en:2017, Printed boards design, manufacture and assembly - Vocabulary - Part 2: Common usage in electronic technologies as well as printed board and electronic assembly technologies, $281.00
IEC 61190-1-3 Ed. 3.0 b:2017, Attachment materials for electronic assembly - Part 1-3: Requirements for electronic grade solder alloys and fluxed and non-fluxed solid solder for electronic soldering applications, $281.00

TERMINOLOGY (TC 1)
IEC 60050-617 Amd.2 Ed. 1.0 b:2017, International electrotechnical vocabulary - Part 617: Organization/Market of electricity, $47.00
IEC 60050-692 Ed. 1.0 b:2017, International electrotechnical vocabulary - Part 692: Generation, transmission and distribution of electrical energy - Dependability and quality of service of electric power systems, $352.00

WINDING WIRES (TC 55)
IEC 60317-33 Ed. 2.0 b:2015, electrical characteristics and measuring methods - Part 33: Glass fibre wound, resin or varnish impregnated, bare or enamedled rectangular copper wire, temperature index 200, $47.00

IEC Technical Reports
FIBRE OPTICS (TC 86)
IEC/TR 61292-9 Ed. 2.0 en:2017, Optical amplifiers - Part 9: Semiconductor optical amplifiers (SOAs), $164.00
NUCLEAR INSTRUMENTATION (TC 45)
IEC/TR 63123 Ed. 1.0 en:2017, Nuclear power plants -
   Instrumentation, control and electrical power systems - Guidance for
   the application of IEC 63147:2017/IEEE Std 497™ -2016 in the
   IAEA / IEC framework, $82.00

POWER SYSTEM CONTROL AND ASSOCIATED
COMMUNICATIONS (TC 57)
IEC/TR 62325-103 Ed. 1.0 en:2017, Framework for energy market
   communications - Part 103: Review of information exchanges within
   the deregulated European style retail energy market from a CIM
   perspective, $387.00
Proposed Foreign Government Regulations

Call for Comment

U.S. manufacturers, exporters, regulatory agencies and standards developing organizations may be interested in proposed foreign technical regulations notified by Member countries of the World Trade Organization (WTO). In accordance with the WTO Agreement on Technical Barriers to Trade (TBT Agreement), Members are required to notify proposed technical regulations that may significantly affect trade to the WTO Secretariat in Geneva, Switzerland. In turn, the Secretariat issues and makes available these notifications. The purpose of the notification requirement is to provide global trading partners with an opportunity to review and comment on the regulations before they become final.

The USA Inquiry Point for the WTO TBT Agreement is located at the National Institute of Standards and Technology (NIST) in the Standards Coordination Office (SCO). The Inquiry Point distributes the notified proposed foreign technical regulations (notifications) and makes the associated full-texts available to U.S. stakeholders via its online service, Notify U.S. Interested U.S. parties can register with Notify U.S. to receive e-mail alerts when notifications are added from countries and industry sectors of interest to them.

To register for Notify U.S., please visit http://www.nist.gov/notifyus/.

The USA WTO TBT Inquiry Point is the official channel for distributing U.S. comments to the network of WTO TBT Enquiry Points around the world. U.S. business contacts interested in commenting on the notifications are asked to review the comment guidance available on Notify U.S. at https://tsapps.nist.gov/notifyus/data/guidance/guidance.cfm prior to submitting comments.

For further information about the USA TBT Inquiry Point, please visit: https://www.nist.gov/standardsgov/what-we-do/trade-regulatory-programs/usa-wto-tbt-inquiry-point

Contact the USA TBT Inquiry Point at: (301) 975-2918; Fax: (301) 926-1559; E-mail: usatbtep@nist.gov or notifyus@nist.gov.
American National Standards

Call for Members

INCITS Executive Board – ANSI Accredited SDO and US TAG to ISO/IEC JTC 1, Information Technology

The InterNational Committee for Information Technology Standards (INCITS), an ANSI accredited SDO, is the forum of choice for information technology developers, producers and users for the creation and maintenance of formal de jure IT standards. INCITS’ mission is to promote the effective use of Information and Communication Technology through standardization in a way that balances the interests of all stakeholders and increases the global competitiveness of the member organizations.

The INCITS Executive Board serves as the consensus body with oversight of its 40+ Technical Committees. Additionally, the INCITS Executive Board has the international leadership role as the US Technical Advisory Group (TAG) to ISO/IEC JTC 1, Information Technology.

Membership in the INCITS Executive Board is open to all directly and materially affected parties in accordance with INCITS membership rules. To find out more about participating on the INCITS Executive Board, contact Jennifer Garner at jgarner@itic.org or visit http://www.incits.org/participation/membership-info for more information.

Membership in all interest categories is always welcome; however, the INCITS Executive Board seeks to broaden its membership base in the following categories:

- Service Providers
- Users
- Standards Development Organizations and Consortia
- Academic Institutions

Society of Cable Telecommunications

ANSI Accredited Standards Developer

SCTE, an ANSI-accredited SDO, is the primary organization for the creation and maintenance of standards for the cable telecommunications industry. SCTE’s standards mission is to develop standards that meet the needs of cable system operators, content providers, network and customer premises equipment manufacturers, and all others who have an interest in the industry through a fair, balanced and transparent process.

SCTE is currently seeking to broaden the membership base of its AN consensus bodies and is interested in new members in all membership categories to participate in new work in fiber-optic networks, advanced advertising, 3D television, and other important topics. Of particular interest is membership from the content (program and advertising) provider and user communities. Membership in the SCTE Standards Program is open to all directly and materially affected parties as defined in SCTE’s membership rules and operating procedures. More information is available at www.scte.org or by e-mail from standards@scte.org.

ANSI Accredited Standards Developers

Application for Accreditation

Aerospace Industries Association (AIA)

Comment Deadline: January 22, 2018

The Aerospace Industries Association (AIA), an ANSI member, has submitted an application for accreditation as an ANSI Accredited Standards Developer (ASD) and proposed operating procedures for documenting AIA-sponsored American National Standards. AIA’s proposed scope of standards activity is as follows:

- Development of standards to support the Aerospace & Defense industry within the subject areas covered by the Aerospace Industries Association. AIA has 5 policy divisions in the areas of Civil Aviation, Space, National Security, International, and Technical Operations & Workforce.

To obtain a copy of AIA’s application and proposed operating procedures or to offer comments, please contact: Mr. Christopher Carnahan, Technical Operations & Workforce Division, Aerospace Industries Association, 1000 Wilson Boulevard, Suite 1700, Arlington, VA 22209-3928; phone: 703.358.1052; e-mail: chris.carnahan@aia-aerospace.org. Please submit any comments to AIA by January 22, 2018, with a copy to the ExSC Recording Secretary in ANSI’s New York Office (e-mail: Jthompson@ansi.org). As the proposed procedures are available electronically, the public review period is 30 days. You may view or download a copy of AIA’s proposed operating procedures from ANSI Online during the public review period at the following URL: www.ansi.org/accredPR.

Society of Fire Protection Engineers (SFPE)

Comment Deadline: January 22, 2018

The Society of Fire Protection Engineers (SFPE), a new ANSI member, has submitted an application for accreditation as an ANSI Accredited Standards Developer (ASD) and proposed operating procedures for documenting SFPE-sponsored American National Standards. SFPE’s proposed scope of standards activity is as follows:

- As the leaders in engineering a fire safe world, SFPE is the largest membership organization for fire protection engineers throughout the globe that crosses all fire safety industry sectors. SFPE is dedicated to defining, developing, and advancing the use of engineering best practices; expanding the scientific and technical knowledge base; and educating the global fire safety community, in order to promote consensus-based standards that increase the effectiveness and productivity of fire safety engineering. Specifically, the SFPE will seek ANSI Accreditation for Standards that provide a framework for the use of performance-based options to the prescriptive-based model building codes and standards.

To obtain a copy of SFPE’s application and proposed operating procedures or to offer comments, please contact: Mr. Chris Jelenewicz, P.E., Technical Director, Society of Fire Protection Engineers, 9711 Washingtonian Boulevard, Suite 380, Gaithersburg, MD 20878; phone: 301.661.5986; e-mail: chris@sfpe.org. Please submit any comments to SFPE by January 22, 2018, with a copy to the ExSC Recording Secretary in ANSI’s New York Office (e-mail: Jthompson@ansi.org). As the proposed procedures are available electronically, the public review period is 30 days. You may view or download a copy of SFPE’s proposed operating procedures from ANSI Online during the public review period at the following URL: www.ansi.org/accredPR.
Reaccreditation

National Fire Protection Association (NFPA)

Comment Deadline: January 22, 2018

The National Fire Protection Association (NFPA), an ANSI member and Accredited Standards Developer, has submitted revisions to its currently accredited Regulations Governing the Development of NFPA Standards for documenting consensus on NFPA-sponsored American National Standards, under which it was last reaccredited in July 2017. As the current revisions appear to be substantive in nature, the reaccreditation process is initiated.

To obtain a copy of the revised procedures or to offer comments, please contact: Ms. Dawn Michele Bellis, Division Manager, Codes and Standards Administration and NFPA Standards Council Secretary, NFPA, One Batterymarch Park, Quincy, MA 02169-7471; phone: 617.984.7246; e-mail: dbellis@nfpa.org. You may view/download a copy of the revisions during the public review period at the following URL: www.ansi.org/accredPR. Please submit any public comments on the revised procedures to NFPA by January 22, 2018, with a copy to the ExSC Recording Secretary in ANSI’s New York Office (jthompos@ANSI.org).

International Organization for Standardization (ISO)

Call for U.S. TAG Administrator

ISO/TC 34/SC 17– Management Systems for Food Safety

ANSI has been informed that American Oil Chemists Society (AOCS), the ANSI-accredited U.S. TAG Administrator for ISO/TC 34/SC 17, wishes to relinquish their role as U.S. TAG Administrator.

ISO/TC 34/SC 17 operates under the following scope:

Standardization in the field of food safety management systems, covering the food supply chain from primary production to consumption, human and animal foodstuffs as well as animal and vegetable propagation materials.

Organizations interested in serving as the U.S. TAG Administrator or participating on a U.S. TAG should contact ANSI’s ISO Team (isot@ansi.org).

ISO Proposal for a New Field of ISO Technical Activity

Occupational Health and Safety Management

Comment Deadline: January 12, 2018

BSI, the ISO member body for the UK and secretariat of ISO Project Committee 283 (ISO/PC 283), has submitted to ISO a proposal for a new field of ISO technical activity on Occupational Health and Safety Management, with the following scope statement:

Standardization in the field of occupational health and safety management to enable an organization to control its OH&S risks and improve its OH&S performance.

Please note that BSI proposed a new work item proposal on this subject in 2013 which was approved and the standard ISO 45001 (Occupational health and safety management systems – Requirements with guidance for use) is currently being developed under ISO/PC 283. As stated in the proposal, during the development of ISO 45001 it became apparent that there are currently no other ISO or IEC committees developing generic occupational health and safety standards other than ISO/PC 283, and this proposal seeks to gain support for an ISO/TMB decision to convert the project committee into a technical committee to enable continual maintenance of ISO 45001 and the development of supporting and related standards.

Anyone wishing to review the proposal can request a copy by contacting ANSI’s ISO Team (isot@ansi.org), with a submission of comments to Steve Cornish (scornish@ansi.org) by close of business on Friday, January 12, 2018.

Meeting Notices

Association of Challenge Course Technology (ACCT) Consensus Group Meeting

The topics that will be discussed at the next meeting of the ACCT Consensus Group are as follows:

- Review and clarify the roles of Consensus Group Members and Officers, ACCT Staff, and Secretariat;
- Review and discuss maintenance and revisions to ACCT 03-2016, as proposed by the ACCT Standards Development Committee.

Meeting Information

Location: Sheraton Downtown Fort Worth
1701 Commerce Street
Fort Worth, TX 76102
Website: http://www.sheratonfortworth.com
Meeting Dates: February 4th, 2018
Time: 9:00 am – 5:00 pm CST

This meeting is open to the public. Persons wishing to attend this meeting are required to pre-register by contacting Bill Weaver, ACCT Director of Operations, bill@acctinfo.org, 800-991-0286, extension 2.
Meeting Notice and Call for Members for the New INCITS Technical Committee on Artificial Intelligence (US TAG to JTC 1/SC 42)

Organizational Meeting – January 30-31, 2018

The 1.5 day organizational meeting of INCITS/Artificial Intelligence will be held January 30 (10:00 AM to 5:00 PM) and January 31, 2018 (9:00 AM to 1:00 PM). The meeting will be hosted by Google in Mountain View or Sunnyvale, California. While face-to-face participation is strongly encouraged, WebEx participation will be available for those not able to attend in person. The agenda, details on the meeting venue, related documents and instructions for joining the WebEx meeting will be distributed to organizational representatives requesting membership on the new committee.

Scope of JTC 1/SC 42 - Standardization in the area of Artificial Intelligence:
- Serve as the focus and proponent for JTC 1’s standardization program on Artificial Intelligence
- Provide guidance to JTC 1, IEC, and ISO committees developing Artificial Intelligence applications

The INCITS committee will operate under the ANSI-accredited procedures for the InterNational Committee for Information Technology Standards (INCITS); (see INCITS Organization, Policies and Procedures). Additional information can also be found at www.INCITS.org and http://www.incits.org/participation/membership-info.

The complete meeting notice and membership information can be found at https://standards.incits.org/apps/group_public/document.php?document_id=94314&wg_abbrev=eb

Z10 Meeting Notice

ANSI/ASSE Z10 Committee for Occupational Health and Safety Systems

The ANSI/ASSE Z10 Committee for Occupational Health and Safety Systems will be meeting at ASSE Headquarters in Chicago April 10th to the 13th. The meeting schedule will be provided prior to the meeting. There will be an RSVP site established and announced with registration information later. If you should have any questions about attendance, please contact Tim Fisher with ASSE on behalf of the secretariat: Timothy Fisher, (847) 768-3411, TFisher@ASSE.Org.
BSR/ASHRAE Standard 209P

Public Review Draft

Energy Simulation Aided Design for Buildings except Low-Rise Residential Buildings

Third Public Review (December 2017)

(Draft Shows Proposed Independent Substantive Changes to Previous Public Review Draft)

This draft has been recommended for public review by the responsible project committee. To submit a comment on this proposed standard, go to the ASHRAE website at www.ashrae.org/standards-research--technology/public-review-drafts and access the online comment database. The draft is subject to modification until it is approved for publication by the Board of Directors and ANSI. Until this time, the current edition of the standard (as modified by any published addenda on the ASHRAE website) remains in effect. The current edition of any standard may be purchased from the ASHRAE Online Store at www.ashrae.org/bookstore or by calling 404-636-8400 or 1-800-727-4723 (for orders in the U.S. or Canada).

The appearance of any technical data or editorial material in this public review document does not constitute endorsement, warranty, or guaranty by ASHRAE of any product, service, process, procedure, or design, and ASHRAE expressly disclaims such.

© 2017 ASHRAE. This draft is covered under ASHRAE copyright. Permission to reproduce or redistribute all or any part of this document must be obtained from the ASHRAE Manager of Standards, 1791 Tullie Circle, NE, Atlanta, GA 30329. Phone: 404-636-8400, Ext. 1125. Fax: 404-321-5478. E-mail: standards.section@ashrae.org.

ASHRAE, 1791 Tullie Circle, NE, Atlanta GA  30329-2305
Third (ISC) Public Review Draft

This is a review of Independent Substantive Changes that were made since the last public review. Areas where substantive changes have been made are highlighted in gray. In these areas, text that was removed from the previous public review is provided for reference but is shown in strikeout and text that has been added is shown with underlines.

Only the changes highlighted in gray are open to comment at this time. All other material is provided for context only and is not open for public review comment except as it relates to the proposed changes.

FOREWORD

ASHRAE Standard 209 describes a methodology to apply building energy modeling to the design process. ASHRAE recognized that building energy simulation is most useful when it can inform the design process to reduce energy use. The standard was created to advance the use of timely energy modeling to quantify how design decisions can affect building energy use when those design decisions are being made.

During the second public review, 8 comments were received from 4 different commenters suggesting changes to many aspects of the standard. The changes in this document reflect deliberation on each of those comments as well as some changes and additions made provided by committee members. Some of the changes include:

- The added language from the second public review for the process energy definition was confusing and was changed back
- Construction costs were added to the output data reporting
- Quality assurance reviews are restricted for modeling cycles in Sections 6 and 7 and modeling cycle #11
- Facility operation was added to the quality assurance review team for modeling cycle #11 reviews
- How to choose from the peak load reduction strategies was clarified

The standard defines seven design phase modeling cycles, each with specific modeling goals that are defined and coordinated with phases of the typical design processes, and the standard also defines three modeling cycles that can be applied during construction and operation of the buildings. Each modeling cycle is an extension of a general modeling cycle that can be applied any time during the design process that energy modeling is needed to inform design decisions. In addition, a post-occupancy comparison is included to help both the owner and modeler understand how modeled results compare actual energy performance, and inform assumptions in future modeling projects.

The minimum requirements of the standard can be met by utilizing building energy modeling to evaluate load reduction measures early in the design process, as well as one additional design phase modeling cycle. Other modeling cycles are included for organizations that wish to adopt more robust energy modeling requirements. While the standard can be applied with any design process, it is anticipated to be most effective when included in an integrative design process.

It is expected the standard will be adopted by organizations that certify high performance buildings, utilities, and agencies that provide incentives for low energy buildings and building owners and architects seeking a uniform way to specify a scope of work for energy modeling.
3.2 Definitions

*process energy*: energy consumed in support of manufacturing, industrial, or commercial processes other than conditioning spaces and maintaining comfort and amenities such as lighting, for the occupants of a building.

5.7.3.3 Output Data Reporting
For the baseline, and for each *project alternative*, report the following annual results:

a. Total site energy consumption
b. Total site energy consumption per unit gross floor area
c. Site energy consumption by *energy end use*
d. Total energy cost
e. Consumption by energy source
f. Cost by energy source
g. Peak cooling demand and time of occurrence (date, day-of-week, day type, hour)
h. Peak heating demand and time of occurrence (date, day-of-week, day-type, hour)
i. Calendar month peak electric demand and time of occurrence (date, day-of-week, day type, hour)
j. Calendar month peak energy consumption by energy source
k. Unmet heating and cooling load hours.
l. Construction cost as determined per Section 5.7.2.5

5.7.4 Quality Assurance
Each *Section 6 and 7 modeling cycle* shall have two reviews: an input review and an output review. *When Modeling Cycle #11 is performed, it shall have an output review.*

5.7.4.1 Quality Assurance Review Team
At a minimum, the review team shall include:

a. Energy modeler
b. Owner (or Owners Representative)
c. Architect
d. Mechanical Designer
e. Electrical or Lighting Designer
f. Facility Operator (for Modeling Cycle #11 reviews).

6.3.3.2 Develop a list of at least three peak load reduction strategies selected from one or more of the following categories:

a. Building envelope (including, but not limited to: insulation level, window-to-wall ratio, glazing performance, shading, infiltration, phase change materials, thermal mass)
b. Lighting and daylighting
c. Internal equipment loads
d. Outdoor air (including, but not limited to: outdoor air flow, exhaust air, energy recovery)
e. Passive conditioning and natural ventilation.

When internal equipment loads exceed 60% of the building energy end use, at least two of the strategies shall be selected from the internal equipment loads category.
4 Materials

4.7 Sealants

Sealants shall meet the requirements for the zone of intended use and shall only be used as permitted in 5.4.4, 5.5.2, and 5.34.

*Rationale:* this cross reference adds specificity to a section previously only cited generally in section 5.4.4
9 Quality assurance

9.9 Product-specific quality assurance requirements

1 Pipe compliant to AWWA C909 shall additionally follow the QC requirements of AWWA C909.
2 Testing per section 5.4 of CSA B137.3.1
NSF/ANSI Standard for Wastewater Treatment Systems —

Residential wastewater treatment systems

5 Design and construction

5.4 Noise

When installed according to the manufacturer’s instructions, the system shall not produce excessive noise.

Noise associated with systems designed for outdoor operation, measured at 1.2 m (4 ft) above the ground surface, 6 m (20 ft) in four directions, at 90, 180, 270, and 360° from the system and its appurtenances shall not exceed 60 dbA.

Noise associated with systems designed for indoor operation, measured at 1.2 m (4 ft) above the ground surface, 1 m (3 ft) in four directions, at 90, 180, 270, and 360° from the system and its appurtenances shall not exceed 60 dbA.

NSF/ANSI Standard for Wastewater Treatment Systems —

Wastewater treatment systems – Nitrogen reduction

5 Design and construction

5.4 Noise

When installed according to the manufacturer’s instructions, the system shall not produce excessive noise.

Noise associated with systems designed for outdoor operation, measured at 1.2 m (4 ft) above the ground surface, 6 m (20 ft) in four directions, at 90, 180, 270, and 360° from the system and its appurtenances shall not exceed 60 dbA.
Noise associated with systems designed for indoor operation, measured at 1.2 m (4 ft) above the ground surface, 1 m (3 ft) in four directions, at 90, 180, 270, and 360° from the system and its appurtenances shall not exceed 60 dbA.

NSF/ANSI Standard for Wastewater Treatment Systems —

**Onsite residential and commercial water reuse treatment systems**

5 Design and construction

5.4 Noise

When installed according to the manufacturer’s instructions, the system shall not produce excessive noise.

Noise associated with systems designed for outdoor operation, measured at 1.2 m (4 ft) above the ground surface, 6 m (20 ft) in four directions, at 90, 180, 270, and 360° from the system and its appurtenances shall not exceed 60 dbA.

Noise associated with systems designed for indoor operation, measured at 1.2 m (4 ft) above the ground surface, 1 m (3 ft) in four directions, at 90, 180, 270, and 360° from the system and its appurtenances shall not exceed 60 dbA. These requirements apply both to systems installed inside and outside the building.

Rationale: The ballot harmonizes the language in all 3 wastewater standards. It provides for a more stringent test for indoor systems. This is appropriate because system noise inside the home will be much more problematic for the home owner than outdoor system noise. This also makes it possible to complete the noise test on a system installed inside a building for performance testing.
Annex F
(normative)

Field tests

F.7.3.2.2 Exhaust alarm system – Type A1 or A2 canopy connection

F.7.3.2.2.1 Maintain inflow velocity using canopy connection on Type A1 or Type A2 cabinets:

a) Shall be tested at time of alarm verification for new or modified installations if using non-NSF listed canopy.

b) Turn facility exhaust system off. Measure inflow velocity of the cabinet. The exhaust alarm shall activate within 15 s of the facility exhaust being turned off. The measured velocity shall be no less than 8.0 ft/min (0.041 m/s) less than the lowest value for the NSF listed inflow velocity range.

F.7.3.2.2.12 Containment loss of the canopy connection on Type A1 or A2 cabinets:

a) Shall be tested at time of alarm verification.

b) Introduce a visible medium source into the canopy air intake(s) while slowly reducing the exhaust volume until there is a loss of capture of the visible medium into the canopy air intake(s). The audible and visual canopy alarms shall respond within 15 s, and the cabinet fan(s) will continue to operate.

c) Direct connected Type A1 or A2 cabinets shall not be considered in compliance with the standard.

NOTE — Direct connected Type A1 or A2 cabinets shall not be considered in compliance with the standard.

Rationale: a “NOTE” by definition is informative, not normative. The note written in this section is normative language and should be updated to a new subsection.
3 Definitions

3.XX. Modified Canopy Installation: Installation of any canopy other than a designated acceptable option for a NSF Listed Biosafety Cabinet.

*Rationale: This definition was approved during the previous revision ballot, and is presented here only for reference.*
2 Definitions

2.33 **Effective size:** The size opening that will just pass 10 percent (by dry weight) of a representative sample of the filter material.

2.145 **Uniformity coefficient:** A ratio calculated as the size opening that will just pass 60 percent (by dry weight) of a representative sample of the filter material divided by the size opening that will just pass 10 percent (by dry weight) of the same sample.

Subsequent definitions alphabetically positioned after the added terms will have their respective reference numbers increased accordingly.

12 Filtration media

12.2.3 **Sand and alternate sand-type filter media**

Filter media in a sand-type filter shall conform to 3.2, 5.1.8, 5.1.9, 5.3.5, and 12.3 when tested in a representative sand-type filter in accordance with Annex B, sections B.3, B.4 and B.5.

12.2.3.1 The manufacturer of sand and an alternate sand-type filter media shall specify the particle effective size and uniformity coefficient for the media. Particle effective size and uniformity coefficient evaluation shall be confirmed performed in accordance with ASTM C136 with sieves conforming to ASTM E11. A minimum of 5 data points shall be measured for sizing. The particle size data shall be plotted as a smooth curve, which shall be used to read the sieve opening sizes at which 60% and 10% of particles can pass. The uniformity coefficient and effective size measured shall be ±10% of the claimed uniformity coefficient and effective size, or shall be within the claimed range of uniformity coefficient and effective size, whichever is larger.

12.2.3.2 The filtration rate and backwash rate for sand and alternate sand-type filter media shall be as
specification in 5.3.9.

12.2.4 Installation and operating instructions

The manufacturer of sand and alternate sand-type media shall provide written instructions for the installation of the media in a filter, including requirements for a different support media; for any specific preparation of the media for operation; and for the operation of filter with the media.

12.2.5 Sand and alternate sand-type media labeling requirements

Sand and alternate sand-type filter media shall contain the following information on the product packaging or documentation shipped with the product:

- manufacturer’s name and contact information (address, phone number, website, or prime supplier);
- product identification (product type, and tradename);
- net weight or net volume;
- when applicable, mesh or sieve size;
- Uniformity coefficient for particle size;
- lot number or other production identifier such as a date code;
- when appropriate, special handling, storage and use instructions; and
- the specific certification mark of the certifying organization for certified products.
BSR/UL 60947-7-4, Standard for Safety for Low-Voltage Switchgear and Controlgear -
Part 7-4: Ancillary equipment - PCB terminal blocks for copper conductors

1. Revision to Clause 3 of the Proposed First Edition of the Standard for Low-Voltage
Switchgear and Controlgear - Part 7-4: Ancillary equipment - PCB terminal blocks for
copper conductors, UL 60947-7-4.

3DV.2 D3 Modification to add the following:
In Canada, the general requirements applicable to this Standard are provided in CAN/CSA-
C22.2 No. 0.
1. This proposed First Edition of the Standard for Electrical Systems of Electronic Cigarettes and Vaping Devices, UL 8139, covers the battery-operated electrical systems that use consumables containing varying compositions of flavorings, propylene glycol, glycerin, and other ingredients, with or without nicotine, which is heated into an aerosol that user inhales. These systems encompass their charging systems, components, parts and accessories.

6.2 A non-metallic material serving as an enclosure of the device shall comply with the Standard for Evaluation of Properties of Polymeric Materials, CAN/CSA-C22.2 No. 0.17, or the Standard for Polymeric Materials - Use in Electrical Equipment Evaluations, UL 746C, and shall have:

a) Flammability with a minimum rating of V-2 or comply with the test, Flammability - 20 mm (3/4-Inch) Flame, in UL 746C;

b) Mechanical Relative Thermal Index (RTI) suitable for the application;

c) Resistance to Moisture Ingress with a minimum IP rating of IPX4, see the Water Exposure Test, Section 27;

d) Resistance to Impact, see the Drop Test, Section 28;

e) Crush Resistance not less than 100 lbs (45.4 kg), see the Crushing Resistance Test, Section 29; and

f) Resistance to Mold Stress Relief Distortion in accordance with the Mold Stress-Relief Distortion Section of CAN/CSA-C22.2 No. 0.17 and UL 746C.

Exception No. 1: This does not apply to non-metallic materials that are part of, or in contact with, consumables.

Exception No. 2: This does not apply to small combustible parts with a mass less than 4 g or with a volume less than 750 mm³.

14.1 Printed wiring boards shall comply with the Standard for Printed-Wiring Boards, UL 796, for a minimum flame rating of V-1 and mechanical Relative Thermal Index maximum operating temperature suitable for the application as determined by the Temperature Test, Section 25.

</tbody>
</table>

1. The number of separate samples needed for a particular test except for single fault conditions. The sample size for single fault conditions is the number of single fault conditions found to be appropriate.

2. The test shall be conducted at each ambient indicated. If the device is not operable under low ambient (for example, -20 °C), the test is repeated at the lowest operating ambient temperature specified by the manufacturer. At the manufacturer’s discretion, a sample tested for an ambient temperature may be tested again for the other ambient temperature.

-35: Not higher than -35°C (-31°F)
-20: Not higher than -20°C (-4°F)
0: Not higher than 0°C (32°F)
25: 25 ±5°C (77 ±9°F)

3. The test shall not result in any of the consequence identified as follows:

A - Fire
B - Rupture
C - Electrolyte leakage
D - Venting
E - Charging temperature limit exceeding the normal operating region
F - Upper limit charging voltage exceeding the normal operating region
G - Maximum charging current exceeding the normal operating region
H - Discharge temperature limit exceeding cell manufacturer’s specification
I - End of discharge voltage exceeding the maximum or minimum
<table>
<thead>
<tr>
<th>normal operating region</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>J</strong> - Maximum discharging current exceeds the normal operating region</td>
</tr>
<tr>
<td><strong>K</strong> - Cracks or openings in the enclosure in a way that compromises the integrity of enclosure</td>
</tr>
<tr>
<td><strong>L</strong> - The open circuit voltage difference between the dropped cell and the reference (undropped) cell exceeding 5%, see Section 28</td>
</tr>
</tbody>
</table>

4 Consequences E, F, G, H, I, and J shall be permitted provided that the device becomes inoperable.

16.4 Temperature shall be measured using thermocouples consisting of wires not larger than 0.21 mm$^2$ (24 AWG) and not smaller than 0.05 mm$^2$ (30 AWG) connected to a potentiometer-type instrument. For those tests that require the sample to reach thermal equilibrium (also referred to as steady state conditions), thermal equilibrium is considered to be achieved if, after three consecutive temperature measurements taken at intervals of 10% of the previously elapsed duration of the test, but not less than 15 minutes, indicate no change in temperature greater than ±2°C (±3.6°F). Unless noted otherwise, a cell temperature measurement shall be followed by a 1-hour observation time after reaching room temperature of 25 ±5°C (77 ±9°F) prior to concluding the test.

16.11 A USB connection shall comply with Sections 19 - 2520 - 23 when connected to a constant current supply capable of 5.25 V dc, 8 A delivering output current of 8 A or more at its nominal voltage.

NOTE The nominal voltage of a USB connection may range from 5.25 V dc (USB 3.0) to 20 V dc (USB PD).

16.12 A vehicle battery adapter connection shall comply with Sections 19 - 2520 - 23 when connected to a constant current supply capable of 12 V dc, 8 A delivering output current of 8 A or more at 12 V dc or 24 V dc.

16.13 Where single fault conditions are identified, the test shall be repeated in accordance with the Single Fault Conditions, Section 17.

17.2 Each fault condition is to be performed at a time on a single sample. Each fault condition is permitted to be performed on separate samples.

18.2 Each battery shall be fully discharged. Each fault condition is to be performed at a time on a single sample in accordance with the Single Fault Conditions, Section 17.

19.2 Each battery shall be fully charged. Each fault condition is to be performed at a time on a single sample in accordance with the Single Fault Conditions, Section 17. The most unfavorable load condition specified by the manufacturer shall be applied.

19.3 Each battery shall be installed in the device and operated until fully discharged, by a test instrument that is capable of operating at a unit duty cycle for operation is defined as comprising:

- 55 mL ± 5% puff volume (at room ambient) over four (4) seconds ON with a constant flow rate, and

- The following six (6) seconds OFF,
Or another more onerous unit duty cycle allowed by the manufacturer that results in a worse thermal profile.

20.4 Each fault condition is to be performed at a time on a single sample in accordance with the Single Fault Conditions, Section 17, in the discharge protection circuit. The total sample size with or without single fault conditions shall not be less than two (2) where at least one sample shall be subjected to the test without single fault conditions.

NOTE If two (2) single fault conditions are considered necessary, then two (2) samples are subjected to the test under each single fault condition identified and an additional sample shall be subjected to the test without single fault conditions, resulting in a total sample size of three (3) samples.

21.3 Each fault condition is to be performed at a time on a single sample in accordance with the Single Fault Conditions, Section 17, in the charging protection circuit. The total sample size with or without single fault conditions shall not be less than two (2) where at least one sample shall be subjected to the test without single fault conditions.

NOTE If two (2) single fault conditions are considered necessary, then two (2) samples are subjected to the test under each single fault condition identified and an additional sample shall be subjected to the test without single fault conditions, resulting in a total sample size of three (3) samples.

22.7 Each fault condition is to be performed at a time on a single sample in accordance with the Single Fault Conditions, Section 17, in the charge protection circuit. The total sample size with or without single fault conditions shall not be less than five (5) where at least one sample shall be subjected to the test without single fault conditions.

23.4 The test is to be continued until the voltage attains the rated output voltage of the power supplies or otherwise the maximum obtainable steady-state charging condition if the rated output voltage cannot be reached due to protection. The cell temperature is monitored for an additional 2 hours unless the test is terminated by consequences noted in Table 16.1.

23.7 Each fault condition is to be performed at a time on a single sample in accordance with the Single Fault Conditions, Section 17, in the charge protection circuit. The total sample size with or without single fault conditions shall not be less than five (5) where at least one sample shall be subjected to the test without single fault conditions.

24.2 A device with a fully charged battery shall be short-circuited by connecting the positive and negative terminals of the sample with a circuit load having a total resistance of less than or equal to 20 mΩ.

24.3 Another device with a fully charged battery shall be overloaded to the maximum obtainable, steady-state discharge current without tripping the protective device.

24.6 Each fault condition is to be performed at a time on a single sample in accordance with the Single Fault Conditions, Section 17, in the discharge protection circuit. The total sample size with or without single fault conditions shall not be less than five (5) where at least one sample shall be subjected to the test of 24.2 and 24.3, respectively, without single fault conditions.

MARKINGS

Advisory Note: In Canada, there are two official languages, English and French. Appendix A provides translations in French of the English safety markings specified in this standard.
Markings required by this standard may have to be provided in other languages to conform to the language requirements of the country where the product is to be used.
BSR/UL 1026, Standard for Household Electric Cooking and Food Serving Appliances

3. New Supplement SB for hospitality-use electric cooking appliances

PROPOSAL

SB2.2 A hospitality-use cooking appliance shall be assembled such that the enclosure of electrical parts cannot be opened for user servicing with ordinary tools. If tamper-resistant screws are employed to comply with this requirement, they shall comply with the following:

a) The securing means as determined through trial removal are unlikely to be removed;

b) The securing means is provided with a tool interface that will not accommodate a slotted, a Phillips, a square, or torx driver, or wrench of any type for removal;

c) The securing means has a head that cannot be gripped by pliers. A securing means provided with a maximum 0.020-inch (0.50-mm) radius curve height above the exposed outer surface of the appliance to which the securing means is affixed is considered as not capable of being gripped; and

d) A minimum of two such securing means are provided.

SB4 Grounding

SB4.1 In a hospitality-use cooking appliance, a conductive connection between separate accessible metal parts that are likely to become energized in a hospitality-use cooking appliance shall be provided.
Standards Action Publishing Schedule for 2018, Volume No. 49

*The “Submit End” deadline applies to forms received by Monday, 5:00 PM ET

Based on the dates below, an ANSI-Developer can anticipate that a request made between the SUBMIT START date and the *SUBMIT END 5 PM date will appear in ANSI Standards Action on the SA PUBLISHED date.

The last three columns display the 30, 45 & 60-DAY PR (Public Review) END dates
