

Southern Africa Energy Storage Standards Workshop

**Wednesday, Oct 20, 2021
& Thursday, Oct 21, 2021**

U.S.-AFRICA CLEAN ENERGY STANDARDS PROGRAM

As countries seek to diversify their energy mix, energy storage is becoming an increasingly important asset for on and off-grid energy delivery. If deployed effectively, energy storage stands to increase the capacity of the electric grid across Southern Africa, pave the way for decentralized energy solutions, and improve the efficiency of power generation across the sub-region.

This virtual workshop will feature two days of presentations by experts on energy storage standards and technology, including an overview of the existing and emerging storage technologies and the specifications that will support their safe and efficient deployment. Discussions will also feature an overview of policies to support an enabling environment and panels on specific battery storage technologies.

October 20 and 21, 2021

2:00 PM – 6:30 PM CAT

8:00 AM – 12:30 PM EST

Registration is required: To save your seat, please contact us-africacesp@ansi.org and indicate your name, title, organization, email, and phone number.

The U.S.-Africa Clean Energy Standards Program is sponsored by the U.S. Trade and Development Agency in partnership with Power Africa and coordinated by the American National Standards Institute. More information is available at www.standardsportal.org/us-africacesp.
