Recommendation for Brian Doherty to the IEC YEP Program

To Whom it may concern at IEC,

This is a letter to confirm my recommendation for Brian Doherty to the IEC YEP program.

In the short time I have known Brian, he has been an enthusiastic member of the NEMA councils and consortiums that are focused on very current activities with the Electrification. We are working specifically on eMobility and Electrification of North American rail.

For NEMA, development of standards is a key function along with development of the association, standards development and lobbying the federal government of the USA. Brian is the lead in the development of the needs of the association for the standards that are identified as being the core elements of the association and the various counsels and consortiums.

Brian is also responsible for ensuring that IEC is a contributor to NEMA and the standard development.

Brian has been the leader for identifying and developing the strategy with the members of NEMA. This means working with senior staff of member companies that may include the presidents of these companies. He has to provide understanding of their needs and expectation then fashion to documents of understanding.

Brian would be a worthy candidate for the YEP program of IEC.

With best regards
