US National Committee of the IEC
Young Professionals Competition

RE: Letter of recommendation for Ms. Chloe David

Dear Selection Committee Members,

It is my pleasure to recommend Ms. Chloe David for the IEC Young Professionals program. Ms. David is a talented engineer with whom I have worked for the past three years, including the past year in a standards context.

Ms. David has a solid technical background, both educational and in practice as an Advanced Technology researcher in Rockwell Automation. Her projects within Rockwell have included work on digital twins, model-based systems engineering, mechatronics, and algorithm development. In addition to her technical skills, I have been impressed with her maturity and communications abilities – a combination that is well-suited to standards work.

Ms. David has thus far participated in standards work as an expert in TC65/WG23 (Smart Manufacturing Framework), JWG21 (Smart Manufacturing Reference Models), as a proposed expert in SMB SG11 (Hot Topic Radar), and has completed IEC Officer Training in Geneva.

I highly recommend Ms. David for the Young Professionals program. I believe she will have an impact in the standards world and will represent the USNC well.

Respectfully Submitted,

Brian Batke
