

Megan Heller Letter of Recommendation

Megan has worked in the Interconnect Qualification Engineering Department for 4 years, where she has impressively become the Subject Matter Expert on line cords, jumpers, and power harnesses. Megan is responsible for the qualification and quality of these cords and manages the several suppliers that provide IBM with these products. Megan works closely with our suppliers, leading collaboration, innovation, and enhancements, while driving suppliers to meet and exceed industry specs. Megan has served as the Lead Auditor on qualification audits for suppliers internationally, most recently qualifying a new supplier in Indonesia to manufacture IEC 60320 power jumpers, where she led the team, identified quality concerns, and drove to close corrective actions, keeping the supplier accountable.

Megan has become a resource across the company for the selection and sourcing of power cords with her growing expertise. She was recently appointed co-chair of the Power Cord Council which has given her an even more substantial leadership role in this domain. She leads a diverse team of talent, bringing in ideas and educating newer members, while seeking opportunities for IBM to be leaders in the industry.

She has expressed interest and enthusiasm in turning her skills externally, and the IEC YP Program will facilitate her involvement and eminence. Megan shows high potential in her career and influence in the interconnect space. She is hardworking and driven, detail oriented, and eager to learn. Bring a part of this program will not only help Megan excel in her field with external networking and learning, but also bring talent to the IEC community, and I am confident she will be an asset to the YP program.

Thanks,

Jeannette Bender

Manager, PCB & Interconnect Qualification Engineering
