

# U.S.-INDO-PACIFIC STANDARDS & TECHNOLOGY COOPERATION PROGRAM

The U.S. Trade and Development Agency (USTDA) is sponsoring the U.S.-Indo-Pacific Standards and Technology Cooperation Program (STCP), a series of workshops in the Indo-Pacific Region featuring key commercial and industrial standards issues and best practices. Workshops will cover standards affecting a range of infrastructure sectors, with specific topics suggested by U.S. industry, in coordination with regional partners, USTDA and the American National Standards Institute (ANSI).

The program will provide a forum for the U.S. public and private sectors and Indo-Pacific countries to:

- **Cooperate** on issues related to standards development, technical regulations, and conformity assessment policies and procedures.
- **Facilitate** U.S.-Indo-Pacific dialogue on standards, conformity assessment, and international best practices.
- **Exchange** up-to-date information on the latest issues related to standards and regulatory developments in sectors such as transportation, energy, telecommunications, healthcare, and agriculture. ANSI will coordinate with USTDA, U.S. industry, and host country entities to prioritize and develop workshop topics.

To learn more about the U.S.-Indo-Pacific Standards and Technology Cooperation Program (STCP) or to sponsor a workshop, please visit [standardsportal.org](http://standardsportal.org) or email [us-indostcp@ansi.org](mailto:us-indostcp@ansi.org).

Coordinated by the American National Standards Institute
