Green Building Practice Workshop
April 3, 2018

Venue: Zhuhai International Convention and Exhibition Center, Zhuhai, Guangdong Province

Sponsored by: U.S. Trade and Development Agency (USTDA)
Chinese Society for Urban Studies – Green Building Research Center

Organized by: U.S.-China Energy Cooperation Program (ECP)
American National Standards Institute (ANSI)

RSVP: ANSI: Mr. Xu Fang, Chief Representative in China
Email: us-chinasccp@ansi.org

In 2014, the State Council Green Building Action Plan mandated that public buildings such as schools, hospitals, museums, stadiums, and affordable housing, as well as any single building area over 20,000 square meters, e.g., airports, railway stations, hotels, restaurants, shopping malls, offices, and other large public buildings, must meet the green building standards of China’s 3-Star Rating System GBEL (The Green Building Evaluation Label).

This workshop is a continuation of ECP's green building initiative. This workshop will highlight cases and experiences in green building design, new materials, building control system, lighting technology, and use advanced data analysis of advanced US practices to educate Chinese developers, design institutes and ECP contractors. Through the workshop, U.S. companies will have the opportunity to bring international cases to Chinese policy makers, local developers, design institutes, engineering and construction companies.
