

# U. S. – CHINA STANDARDS AND CONFORMANCE COOPERATION PROGRAM

## Value of Physician Ultrasound Certification in China

Saturday, June 10, 2017

- Venue:** #5 Conference Room, 1/F, Jiabing Building  
Beijing Friendship Hotel, 1 Zhongguancun South St. Beijing 100873, China
- Sponsored by:** U.S. Trade and Development Agency (USTDA)
- Organized by:** American National Standards Institute (ANSI)  
Inteleos
- RSVP:** ANSI: Mr. Xu Fang, Chief Representative in China  
Email: [us-chinascpp@ansi.org](mailto:us-chinascpp@ansi.org)

This workshop will highlight the importance of a Physician Ultrasound Certification Program in China that establishes a standard of proficiency for physicians using ultrasound equipment. Inteleos' non-profit certification programs (standards of proficiency) are based on education, training, assessment, and continual learning. Physicians who have achieved the established standard of proficiency provide better patient care and contribute to improved patient safety in China. Additionally, physicians who have met this standard of proficiency through certification are able to utilize ultrasound equipment effectively, and in high-risk situations, potentially improving care.

The goal of this workshop is to bring together key partners in China and the United States to demonstrate the benefits of ultrasound certification programs (standards of proficiency) on patient care in China. This workshop will demonstrate the necessary contributions of education, healthcare simulation and ultrasound equipment in providing quality patient care. It is expected that physicians who have met standards of proficiency through certification will increase demand for ultrasound education, simulation, technology and improved patient care in China.
