Call for comment on proposals listed

This section solicits public comments on proposed draft new American National Standards, including the national adoption of ISO and IEC standards as American National Standards, and on proposals to revise, reaffirm or withdraw approval of existing American National Standards. A draft standard is listed in this section under the ANSI-accredited standards developer (ASD) that sponsors it and from whom a copy may be obtained. Comments in connection with a draft American National Standard must be submitted in writing to the ASD no later than the last day of the comment period specified herein. Such comments shall be specific to the section(s) of the standard under review and include sufficient detail so as to enable the reader to understand the commenter’s position, concerns and suggested alternative language, if appropriate. Please note that the ANSI Executive Standards Council (ExSC) has determined that an ASD has the right to require that interested parties submit public review comments electronically, in accordance with the developer’s procedures.

Ordering Instructions for “Call-for-Comment” Listings
1. Order from the organization indicated for the specific proposal.
2. Use the full identification in your order, including the BSR prefix, for example, Electric Fuses BSR/SAE J554.
3. Include remittance with all orders.
4. BSR proposals will not be available after the deadline of call for comment.

Comments should be addressed to the organization indicated, with a copy to the Board of Standards Review, American National Standards Institute, 25 West 43rd Street, New York, NY 10036. Fax: 212-840-2298; e-mail: psa@ansi.org

ISSN 0038-9633
BSR/ASME B16.21-201x, Nonmetallic Flat Gaskets for Pipe Flanges (revision of ANSI/ASME B16.21-2005)

Covers types, sizes, materials, dimensions, tolerances, and markings for nonmetallic flat gaskets. These gaskets are dimensionally suitable for use with flanges described in the referenced flange standards.

BSR/UL 1786-201x, Standard for Safety for Direct Plug-In Nightlights (revision of ANSI/UL 1786-2005)

The following topic for the Standard for Direct Plug-In Nightlights, UL 1786, is being recirculated:

(3) Withdrawal of Proposal: Revise requirements for accessibility of live parts to include new finger probe.

Click here to see these changes in full, or look at the end of “Standards Action.”

Send comments (with copy to BSR) to: Heather Sakellariou, (847) 664-2346, Heather.Sakellariou@us.ul.com

BSR/UL 2017-201x, Standard for General-Purpose Signaling Devices and Systems (revision of ANSI/UL 2017-2004 (R2008))

Provides revision to correct audibility test method to require two reflecting planes.

Click here to see these changes in full, or look at the end of “Standards Action.”

Send comments (with copy to BSR) to: Amy Walker, (847) 664-2023, Amy.K.Walker@us.ul.com

Covers the minimal requirements for dental electrosurgical devices that operate in the 1.5- to 4-MHz frequency range and have a maximum power output capability of 100 watts or less, but not less than a maximum capability of 50 watts, and are used principally in the oral cavity for performing clinical dental electrosurgery procedures by biterminal technique. The elements covered in this standard include: the electrosurgical high-frequency generator and directly related accessories such as the active cables and electrodes, dispersive electrode and cable foot switches, and other operator-controlled mechanisms for activation of the generator output.

Send comments (with copy to BSR) to: Marcia Kawate, (408) 754-6743, Marcia.M.Kawate@us.ul.com

BSR/UL 1034-201x, Standard for Safety for Burglary-Resistant Electric Locking Mechanisms (Proposal dated 10-29-10) (revision of ANSI/UL 1034-2010)

Modifies the Electrical Rating Marking Requirements in 61.1.

Click here to see these changes in full, or look at the end of “Standards Action.”

Send comments (with copy to BSR) to: Linda Phinney, (408) 754-6684, Linda.L.Phinney@us.ul.com

Revisions

BSR/ASME BPVC Section IX-201x, Welding and Brazing Qualifications (revision of ANSI/ASME BPVC Section IX-2010)
Section IX of the ASME Boiler and Pressure Vessel Code relates to the qualification of welders, welding operators, brazers, and brazing operators, and the procedures that they employ in welding and brazing according to the ASME Boiler and Pressure Vessel Code and the ASME B31 Code for Pressure Piping.

BSR/ASME BPVC Section VIII-201x, Rules for Construction of Pressure Vessels (revision of ANSI/ASME BPVC Section VIII-2010)
This Section contains mandatory requirements, specific prohibitions, and nonmandatory guidance for pressure vessel materials, design, fabrication, examination, inspection, testing, certification, and pressure relief. The Code does not address all aspects of these activities, and those aspects which are not specifically addressed should not be considered prohibited.

Call for Members (ANS Consensus Bodies)

Directly and materially affected parties who are interested in participating as a member of an ANS consensus body for the standards listed below are requested to contact the sponsoring standards developer directly and in a timely manner.

AAMI (Association for the Advancement of Medical Instrumentation)
Office: 4301 N Fairfax Drive
      Suite 301
      Arlington, VA  22203-1633

Contact: Cliff Bernier
Phone:  (703) 253-8263
Fax:  (703) 276-0793
E-mail: CBerrier@aami.org

BSR/AAMI AT6-2005 (R201x), Autologous transfusion devices (reaffirmation of ANSI/AAMI AT6-2005)
BSR/AAMI RD61-2006 (R201x), Concentrates for hemodialysis (reaffirmation of ANSI/AAMI RD61-2006)
BSR/AAMI RD62-2006 (R201x), Water treatment equipment for hemodialysis applications (reaffirmation of ANSI/AAMI RD62-2006)
BSR/AAMI RD62/A1-2009 (R201x), Water treatment equipment for hemodialysis applications, Amendment 1 - 4.2.6, Deionization (reaffirmation of ANSI/AAMI RD62/A1-2009)
BSR/AAMI/ISO 13958-201x, Concentrates for hemodialysis and related therapies (identical national adoption and revision of ANSI/AAMI RD61-2006)
BSR/AAMI/ISO 26722-201x, Water treatment equipment for hemodialysis applications and related therapies (identical national adoption and revision of ANSI/AAMI RD62-2006)

ASSE (ASC A10) (American Society of Safety Engineers)
Office: 1800 East Oakton Street
      Des Plaines, IL  60018-2187

Contact: Tim Fisher
Phone:  (847) 768-3411
Fax:  (847) 768-3411

BSR/ASSE A10.13-201x, Safety Requirements for Steel Erection (revision of ANSI/ASSE A10.13-2001)

CCPA (ASC B212) (Cemented Carbide Producers Association)
Office: 30200 Detroit Road
      Cleveland, Ohio  44135

Contact: Linda Hamill
Phone:  (440) 999-9228
Fax:  (440) 899-0010
E-mail: leh@wherryassoc.com

BSR B212.3-2002 (R201x), Cutting Tools - Precision Holders for Indexable Inserts (reaffirmation of ANSI B212.3-2002)

ISA (ISA)
Office: 67 Alexander Drive
      Research Triangle Park, NC  27709

Contact: Eliana Beattie
Phone:  (919) 999-9228
Fax:  (919) 549-8288
E-mail: ebeattie@isa.org

BSR/ISA 92.00.01-201x, Performance Requirements for Toxic Gas Detectors (new standard)
BSR/ISA 60079-20-1-201x, Explosive Atmospheres - Part 20-1: Material characteristics for gas and vapour classification - Test methods and data (national adoption with modifications of IEC 60079-20-1)

NEMA (ASC C136) (National Electrical Manufacturers Association)
Office: 1300 N. 17th Street
      Suite 1752
      Rosslyn, VA  22209

Contact: Alex Boesenberg
Phone:  (703) 841-3268
Fax:  (703) 841-3368
E-mail: alex.boesenberg@nema.org

BSR C136.40-201x, Roadway and Area Lighting Equipment - Solar Lighting (new standard)
BSR/UL 69-201x, Standard for Safety for Electric-Fence Controllers
(revision of ANSI/UL 69-2009)
Final actions on American National Standards

The standards actions listed below have been approved by the ANSI Board of Standards Review (BSR) or by an ANSI-Audited Designator, as applicable.

AAMI (Association for the Advancement of Medical Instrumentation)

**New National Adoptions**

API (American Petroleum Institute)

**Addenda**

**New National Adoptions**

**Reaffirmations**

ASME (American Society of Mechanical Engineers)

**Reaffirmations**

ANSI B18.2.4.4M-1982 (R2010), Metric Hex Flange Nuts (reaffirmation of ANSI B18.2.4.4M-1982 (R2005)): 10/20/2010

**Withdrawals**

ANSI/ASME B18.2.3.2M-2005, Metric Formed Hex Screws (withdrawal of ANSI/ASME B18.2.3.2M-2005): 10/20/2010

ASSE (ASC Z490) (American Society of Safety Engineers)

**Reaffirmations**

AWWA (American Water Works Association)

**Revisions**

EIA (Electronic Industries Alliance)

**Reaffirmations**

IEEE (Institute of Electrical and Electronics Engineers)

**Revisions**

ITI (INCITS) (InterNational Committee for Information Technology Standards)

**New National Adoptions**

**Supplements**

NECA (National Electrical Contractors Association)

**Revisions**

NSF (NSF International)

**Revisions**

ANSI/NSF 8-2010 (i9), Commercial powered food preparation equipment (revision of ANSI/NSF 8-2009): 10/21/2010

VC (ASC Z80) (The Vision Council)

**Revisions**

WMMA (ASC O1) (Wood Machinery Manufacturers of America)

**Revisions**

Project Initiation Notification System (PINS)

ANSI Procedures require notification of ANSI by ANSI-accredited standards developers (ASD) of the initiation and scope of activities expected to result in new or revised American National Standards (ANS). Early notification of activity intended to reaffirm or withdraw an ANS and in some instances a PINS related to a national adoption is optional. The mechanism by which such notification is given is referred to as the PINS process. For additional information, see clause 2.4 of the ANSI Essential Requirements: Due Process Requirements for American National Standards.

Following is a list of proposed actions and new ANS that have been received recently from ASDs. Please also review the section in Standards Action entitled “American National Standards Maintained Under Continuous Maintenance” for additional or comparable information with regard to standards maintained under the continuous maintenance option. To view information about additional standards for which a PINS has been submitted and to search approved ANS, please visit www.NSSN.org, which is a database of standards information. Note that this database is not exhaustive.

Directly and materially affected interests wishing to receive more information or to submit comments are requested to contact the standards developer directly within 30 days of the publication of this announcement.

ABMA (ASC B3) (American Bearing Manufacturers Association)
Office: 2025 M Street, NW
Suite 800
Washington, DC 20036-3309
Contact: James Converse
Fax: (919) 827-4587
E-mail: jconverse@americanbearings.org

Stakeholders: American bearing manufacturers and users.
Project Need: To bring the tolerance values in section 5 in line with ISO 492:2002 and to show equivalence between ABMA tolerance classes (K,N etc) and ISO classes (Normal, 6X etc).
Provides metric design criteria for tapered roller bearings.

BSR/ABMA 20-201X, Radial Bearings of Ball, Cylindrical Roller and Spherical Roller Types Metric Design (new standard)
Stakeholders: American bearing manufacturers and users.
Project Need: There is no current U.S. standard covering this.
Provides metric design criteria for tapered roller bearings.

Stakeholders: American bearing manufacturers and users.
Project Need: There is no current U.S. standard covering this.
Defines and specifies measuring methods for vibration of rotating rolling bearings under established test conditions together with calibration of related measuring systems.

ABYC (American Boat and Yacht Council)
Office: 613 Third Street, Suite 10
Annapolis, MD 21403
Contact: John Adey
Fax: (410) 990-4466
E-mail: jadey@abyinc.org

BSR/ABYC S-31-201X, Environmental Considerations for Distributed Power Systems Installed Onboard Boats (new standard)
Stakeholders: Boat manufacturers, consumers, surveyors, trade organizations, insurance personnel.
Project Need: To identify environmental/safety issues with distributed power systems installed on boats.
Qualifies distributed power systems for use onboard boats.

ARMA (Association of Records Managers and Administrators)
Office: 11880 College Boulevard, Suite 450
Overland Park, KS 66210
Contact: Nancy Barnes
Fax: (913) 341-3742
E-mail: standards@armaintl.org

BSR/ARMA 19-201X, Managing Electronic Messages as Records (new standard)
Stakeholders: Records and information management practitioners, educators, archivists, consultants, IT professionals, and individuals employed in a legal setting.
Project Need: To aid in the formulation of records management policy for the life-cycle management of electronic messages.
Sets the requirements for managing electronic messages as records and extends to any type of text-based electronic message or communication including email, instant messaging (IM), and text messaging (SMS). This publication will not include:
- video messaging;
- voice mail/audio-based messaging applications; and
- other electronic messaging platforms within the context of social media.

ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.)
Office: 1791 Tullie Circle NE
Atlanta, GA 30329
Contact: Susan LeBlanc
Fax: (678) 539-2175
E-mail: sleblanc@ashrae.org

Stakeholders: Consumers, builders, manufacturers, product rating and certification agencies, and others by providing clearly-written procedures for accurately measuring the temperatures of solids, liquids, and gases.
Project Need: This temperature measurement standard is one of the core measurement standards that are referenced in many ASHRAE Method of Test standards. This standard has not had a major revision since 1986, when mercury-in-glass thermometers were widely used. The planned update will address the modern temperature measurement needs of the HVAC&R community and other stakeholders.
This standard applies to: (1) Laboratory airflow testing of heating, ventilating, air-conditioning, and refrigerating equipment and components; (2) Measurement of mass flow rate of air; and (3) Airflow measurement at measuring equipment pressure within +/-25 kPa (+/-100 in. of water) gage. This standard does not apply to field testing of installed equipment or systems.
BSR/ASHRAE Standard 41.2P-201x, Standard Methods for Laboratory Airflow Measurement (new standard)

Stakeholders: Consumers, heating and air-conditioning equipment manufacturers, product rating and certification agencies, and others by providing clearly written procedures for accurately measuring laboratory airflow

Project Need: This laboratory airflow measurement standard is one of the core measurement standards that are referenced in many ASHRAE Method of Test standards. This standard has not had a major revision since 1987. The planned update will address the modern laboratory airflow measurement needs of the HVAC&R community and other stakeholders.

This standard applies to:
- Laboratory airflow testing of heating, ventilating, air-conditioning, and refrigerating equipment and components;
- Measurement of mass flow rate of air; and
- Airflow measurement at measuring equipment pressure within +/-25 kPa (+/-100 in. of water) gage. This standard does not apply to field testing of installed equipment or systems.

BSR/ASHRAE Standard 41.3P-201x, Standard Methods for Pressure Measurement (new standard)

Stakeholders: Consumers, heating and air-conditioning equipment manufacturers, product rating and certification agencies, and others by providing clearly written procedures for accurately measuring pressure.

Project Need: This pressure measurement standard is one of the core measurement standards that are referenced in many ASHRAE Method of Test standards. This standard has not had a major revision since 1989. The planned update will address the modern pressure measurement needs of the HVAC&R community and other stakeholders.

The pressure measurement methods described in this standard are intended for use in testing heating, refrigerating, and air-conditioning equipment and components.

BSR/ASHRAE Standard 41.4-201x, Standard Methods for Proportion of Lubricant in Liquid Refrigerant Measurement (revision of ANSI/ASHRAE Standard 41.4-1996 (R2006))

Stakeholders: Consumers, food producers and distributors, refrigerant system manufacturers, refrigerant system test laboratories.

Project Need: This lubricant-in-refrigerant measurement standard is one of ASHRAE's core measurement standards. The planned update of the 1996 version will cover both organic and synthetic lubricants, and will include laboratory test methods to accurately determine the amount of lubricant circulating with refrigerant in air-conditioners, chillers, and other refrigerant systems. The information that system designers obtain from these tests will be used to improve refrigerant system efficiency and reliability.

Applies to miscible lubricant, immiscible lubricants, and supercritical refrigerant flows provided that the sample contains a representative collection of the circulating refrigerant-lubricant mixture.

BSR/ASHRAE Standard 41.6-201x, Standard Methods for Humidity Measurement (revision of ANSI/ASHRAE Standard 41.6-1994 (R2006))

Stakeholders: Consumers, builders, manufacturers, environmental regulators, others by providing the clearly written procedures for accurately measuring humidity.

Project Need: This humidity measurement standard is one of the core measurement standards that are referenced in many ASHRAE Method of Test standards. This standard has not had a major revision since 1994. The planned update will include ASHRAE-sponsored research to facilitate more accurate wet-bulb temperature measurements, and will address the modern humidity measurement needs of the HVAC&R community and other stakeholders.

Applies to the measurement of humidity of moist air from sea level to 3048 m (10,000 ft), within the dry bulb temperature range of -50°C to 160°C (-58°F to 320°F), and within the dew point temperature range of -50°C to 99°C (-58°F to 210°F).

BSR/ASHRAE Standard 41.8P-201x, Standard Methods of Measurement of Flow of Liquids in Pipes Using Orifice (new standard)

Stakeholders: Consumers, heating and air-conditioning equipment manufacturers, product rating and certification agencies.

Project Need: This liquid flow measurement standard is one of the core measurement standards that are referenced in many ASHRAE Method of Test standards. This standard has not had a major revision since 1989, when square-edged orifice meters were the primary instruments for measuring liquid flow. The planned update will address the breadth of modern liquid flow measurement instruments and will provide test methods to meet the needs of the HVAC&R community and other stakeholders.

Applies to fluids that exist in the liquid physical state and whose thermodynamic properties are such that the fluid will remain in a complete liquid state prior to, during, and following its path through the flow-measuring instrument.

ASTM (ASTM International)

Office: 100 Barr Harbor Drive
West Conshohocken, PA 19428-2959

Contact: Helene Skloff
Fax: (610) 834-7013
Email: hskloff@astm.org; cleonard@astm.org

BSR/ASTM WK30649-201x, New Guide for Steel Ship Structure Repair Doubler Plate Design (new standard)

Stakeholders: Ships and Marine Technology Industry.

Project Need: To provide a guide for designing steel ship structure repair doubler plate.

http://www.astm.org/DATABASE.CART/WORKITEMS/WK30649.htm

AWWA (American Water Works Association)

Office: 6666 West Quincy Avenue
Denver, CO 80235

Contact: Paul Olson
Fax: (303) 795-7603
Email: polson@awwa.org; llobb@awwa.org

ANSI/AWWA C6DD-201x, Spray-in-Place Polymeric Pipe Lining for Potable Water Pipelines (new standard)

Stakeholders: Drinking water treatment and supply industry water utilities, consulting engineers, water treatment equipment manufacturers, installers.

Project Need: Sprayed-in-place polymeric pipe lining has been used in the water and wastewater industry for over 10 years and has supplanted epoxy lining in the UK as the primary lining material. A standard is necessary in order to provide guidance to end users, manufacturers, and installers, as well as to protect utility customers. Describes the requirements for the materials and application of polymeric lining to the inside surface of previously installed water pipelines. Related work required for performing a complete contract will also generally be described.

BSR/AWWA B300a-201x, Hypochlorites (supplement to ANSI/AWWA B300-2010)

Stakeholders: Drinking water treatment and supply industry water utilities, consulting engineers, water treatment equipment manufacturers.

Project Need: The purpose of this addendum is to add an appendix to AWWA B300-10 establishing acceptable practices for handling and storage of hypochlorite, in order to address concerns over perchlorate formation.

Describes chlorinated lime, calcium hypochlorite, and sodium hypochlorite for use in water, wastewater, and reclaimed water treatment. This addendum will add an appendix covering handling and storage practices to address concerns over perchlorate formation.
BSR/FCI 69-1-201x, Pressure Rating Standard for Steam Traps (revision of ANSI/FCI 69-1-1989 (R2004))

Stakeholders: Manufacturers, users, and specifiers.

Project Need: The standard was established to assist manufacturers, users, and specifiers of the products to comply with pressure ratings for their pressure containing envelope and bolting.

Provides the minimum requirements for the design, fabrication, pressure rating, and marking of pressure containing housings for steam traps.

BSR INCITS/ISO 19143-201x, Geographic information - Filter encoding (identical national adoption of ISO 19143:2010)

Stakeholders: ICT Stakeholders.

Project Need: Adoption of this International Standard will be beneficial to the ICT industry.

Describes an XML and KVP encoding of a system neutral syntax for expressing projections, selection and sorting clauses collectively called a query expression. These components are modular and intended to be used together or individually by other International Standards that reference ISO 19143: 2010.

BSR/MSS SP-58-201x, Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application, and Installation (new standard)

Stakeholders: Plumbing, HVAC, construction, mechanical, electrical, industrial, fluid conveyance, and other related industries.

Project Need: To provide public safety and to assist and guide those tasked with the design, manufacture, specification, use, and inspection of pipe hangers, systems, and supports. This Standard Practice is widely used in industry and normatively referenced in other current standards. As such, this Standard Practice warrants elevation to national status.

This Standard Practice establishes:

1. the material, design, fabrication, and inspection criteria to be used in the manufacture of standard types of pipe hanger components;
2. establishes the allowable stress values for materials used in standard types of pipe support components and unique hanger design assemblies;
3. establishes minimum design load ratings for rigid pipe hanger assemblies;
4. presents the recommended practice for the selection and application of pipe hangers and supports for all service temperatures; and
5. establishes recommended procedures for detailing, fabrication, and installation of pipe hangers and supports.

Deals with the identification of wood from conifers and also permits determination of the coniferous origin of fibers in pulp and paper. The majority of the species described are found in the continental United States and Canada; however, several exotic species found in commercial channels are also included.
American National Standards Maintained Under Continuous Maintenance

The ANSI Essential Requirements: Due Process Requirements for American National Standards provide two options for the maintenance of American National Standards (ANS): periodic maintenance (see clause 4.7.1) and continuous maintenance (see clause 4.7.2). Continuous maintenance is defined as follows:

The standard shall be maintained by an accredited standards developer. A documented program for periodic publication of revisions shall be established by the standards developer. Processing of these revisions shall be in accordance with these procedures. The published standard shall include a clear statement of the intent to consider requests for change and information on the submittal of such requests. Procedures shall be established for timely, documented consensus action on each request for change and no portion of the standard shall be excluded from the revision process. In the event that no revisions are issued for a period of four years, action to reaffirm or withdraw the standard shall be taken in accordance with the procedures contained in the ANSI Essential Requirements.

The Executive Standards Council (ExSC) has determined that for standards maintained under the Continuous Maintenance option, separate PINS announcements are not required. The following ANSI Accredited Standards Developers have formally registered standards under the Continuous Maintenance option.

- AAMI (Association for the Advancement of Medical Instrumentation)
- AAMVA (American Association of Motor Vehicle Administrators)
- AGA (American Gas Association)
- AGRSS, Inc. (Automotive Glass Replacement Safety Standards Committee, Inc.)
- ASC X9 (Accredited Standards Committee X9, Incorporated)
- ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.)
- ASME (American Society of Mechanical Engineers)
- ASTM (ASTM International)
- GEIA (Greenguard Environmental Institute)
- HL7 (Health Level Seven)
- MHI (ASC MH10) (Material Handling Industry)
- NBBPVI (National Board of Boiler and Pressure Vessel Inspectors)
- NCPDP (National Council for Prescription Drug Programs)
- NISO (National Information Standards Organization)
- NSF (NSF International)
- TIA (Telecommunications Industry Association)
- UL (Underwriters Laboratories, Inc.)

To obtain additional information with regard to these standards, such as contact information at the ANSI accredited standards developer, please visit ANSI Online at www.ansi.org, select Internet Resources, click on "Standards Information," and see "American National Standards Maintained Under Continuous Maintenance". This information is also available directly at www.ansi.org/publicreview.

Alternatively, you may contact the Procedures & Standards Administration Department (PSA) at psa@ansi.org or via fax at 212-840-2298. If you request that information be provided via E-mail, please include your E-mail address; if you request that information be provided via fax, please include your fax number. Thank you.
ISO and IEC Draft International Standards

This section lists proposed standards that the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC) are considering for approval. The proposals have received substantial support within the technical committees or subcommittees that developed them and are now being circulated to ISO and IEC members for comment and vote. Standards Action readers interested in reviewing and commenting on these documents should order copies from ANSI.

Comments
Comments regarding ISO documents should be sent to Rachel Howenstine at ANSI's New York offices (isot@ansi.org), those regarding IEC documents to Charles T. Zegers, also at ANSI New York offices. The final date for offering comments is listed after each.

Ordering Instructions
ISO/IEC DIS can be made available by contacting ANSI's Customer Service department. Please e-mail your request for an ISO or IEC Draft to Customer Service at sales@ansi.org. When making your request, please provide the date of the Standards Action issue in which the draft document you are requesting appears. IEC Drafts are available from IEC directly via their online store at http://www.iec.ch.

ISO Standards

ISO/IEC DIS 29341-17-11, Information technology - UPnP Device Architecture - Part 17-11: Quality of Service Device Control Protocol - Level 3 - Quality of Service Manager Service - 2/21/2011, $155.00
ISO/IEC DIS 29341-17-12, Information technology - UPnP Device Architecture - Part 17-12: Quality of Service Device Control Protocol - Level 3 - Quality of Service Policy Holder Service - 2/21/2011, $98.00
IEC Standards

14/669/FDIS, IEC 60076-2 Ed.3: Power transformers - Part 2:
Temperature rise for liquid-immersed transformers, 01/07/2011

34A/1422/FDIS, IEC 62532: Fluorescent induction lamps - Safety
specifications, 01/07/2011

37A/229/FDIS, IEC 61643-11 Ed. 1.0: Low-voltage surge protective
devices - Part 11: Surge protective devices connected to
low-voltage power systems - Requirements and test methods,
01/07/2011

23E/706/FDIS, IEC 62640 Ed.1: Residual current devices with or
without overcurrent protection for socket-outlets for household and
similar uses, 12/10/2010

29/728/FDIS, IEC 62489-2 Ed.1: Electroacoustics - Audio-frequency
induction loop systems for assisted hearing - Part 2: Methods of
calculating and measuring the low-frequency magnetic field
emissions from the loop for assessing conformity with guidelines on
limits for human exposure, 12/10/2010

47E/405/FDIS, IEC 60747-14-4 Ed1: Semiconductor devices - Discrete
devices - Part 14-4: Semiconductor accelerometers, 12/10/2010

86/378/FDIS, IEC 62496-2-2 Ed. 1.0: Optical circuit boards - Part 2-2:
Measurements - Dimensions of optical circuit boards, 12/10/2010

86/379/FDIS, IEC 62496-4 Ed. 1.0: Optical circuit boards - Part 4:
Interface standards - General and guidance, 12/10/2010

86/380/FDIS, IEC 62496-3 Ed. 1.0: Optical circuit boards - Part 3:
Performance standards - General and guidance, 12/10/2010
Newly Published ISO Standards

Listed here are new and revised standards recently approved and promulgated by ISO - the International Organization for Standardization. Most are available at the ANSI Electronic Standards Store (ESS) at www.ansi.org. All paper copies are available from Standards resellers (http://webstore.ansi.org/faq.aspx#resellers).

ACOUSTICS (TC 43)

AGRICULTURAL FOOD PRODUCTS (TC 34)
ISO 27608:2010, Animal and vegetable fats and oils - Determination of Lovibond® colour - Automatic method, $57.00

DIMENSIONAL AND GEOMETRICAL PRODUCT SPECIFICATIONS AND VERIFICATION (TC 213)
ISO 3611:2010, Geometrical product specifications (GPS) - Dimensional measuring equipment: Micrometers for external measurements - Design and metrological characteristics, $92.00

FIRE SAFETY (TC 92)
ISO 11925-2:2010, Reaction to fire tests - Ignitability of products subjected to direct impingement of flame - Part 2: Single-flame source test, $110.00

GRAPHICAL SYMBOLS (TC 145)
ISO 28564-1:2010, Public information guidance systems - Part 1: Design principles and element requirements for location plans, maps and diagrams, $98.00

INDUSTRIAL AUTOMATION SYSTEMS AND INTEGRATION (TC 184)
ISO 10303-50/Cor1:2010, Industrial automation systems and integration - Product data representation and exchange - Part 50: Integrated generic resource: Mathematical constructs - Corrigendum, FREE

LIGHT METALS AND THEIR ALLOYS (TC 79)
ISO 7668:2010, Anodizing of aluminium and its alloys - Measurement of specular reflectance and specular gloss of anodic oxidation coatings at angles of 20 degrees, 45 degrees, 60 degrees or 85 degrees, $80.00

MECHANICAL TESTING OF METALS (TC 164)
ISO 1143:2010, Metallic materials - Rotating bar bending fatigue testing, $110.00

OIL AND GAS BURNERS (TC 109)
ISO 22967:2010, Forced draught gas burners, $193.00
ISO 22968:2010, Forced draught oil burners, $180.00

OPTICS AND OPTICAL INSTRUMENTS (TC 172)
ISO 11986:2010, Ophthalmic optics - Contact lenses and contact lens care products - Determination of preservative uptake and release, $49.00

PAINTS AND VARNISHES (TC 35)
ISO 10890:2010, Paints and varnishes - Modelling of biocide release rate from antifouling paints by mass-balance calculation, $57.00

PLASTICS PIPES, FITTINGS AND VALVES FOR THE TRANSPORT OF FLUIDS (TC 138)
ISO 15877-1/Amd1:2010, Plastics piping systems for hot and cold water installations - Chlorinated poly(vinyl chloride) (PVC-C) - Part 1: General - Amendment 1, $16.00
ISO 15877-2/Amd1:2010, Plastics piping systems for hot and cold water installations - Chlorinated poly(vinyl chloride) (PVC-C) - Part 2: Pipes - Amendment 1, $16.00
ISO 15877-3/Amd1:2010, Plastics piping systems for hot and cold water installations - Chlorinated poly(vinyl chloride) (PVC-C) - Part 3: Fittings - Amendment 1, $16.00
ISO 15877-5/Amd1:2010, Plastics piping systems for hot and cold water installations - Chlorinated poly(vinyl chloride) (PVC-C) - Part 5: Fitness for purpose of the system - Amendment 1, $16.00

PLASTICS (TC 61)
ISO 175:2010, Plastics - Methods of test for the determination of the effects of immersion in liquid chemicals, $98.00

RUBBER AND RUBBER PRODUCTS (TC 45)
ISO 22762-1:2010, Elastomeric seismic-protection isolators - Part 1: Test methods, $180.00
ISO 23529:2010, Rubber - General procedures for preparing and conditioning test pieces for physical test methods, $86.00

SAFETY OF MACHINERY (TC 199)
ISO 12100:2010, Safety of machinery - General principles for design - Risk assessment and risk reduction, $180.00

TERMINOLOGY (PRINCIPLES AND COORDINATION) (TC 37)
ISO 24615:2010, Language resource management - Syntactic annotation framework (SynAF), $92.00

TRACTORS AND MACHINERY FOR AGRICULTURE AND FORESTRY (TC 23)
ISO 11783-6:2010, Tractors and machinery for agriculture and forestry - Serial control and communications data network - Part 6: Virtual terminal, $277.00
WELDING AND ALLIED PROCESSES (TC 44)

ISO 7291:2010, Gas welding equipment - Pressure regulators for manifold systems used in welding, cutting and allied processes up to 30 MPa (300 bar), $98.00

ISO Technical Specifications

AGRICULTURAL FOOD PRODUCTS (TC 34)

ISO/TS 15495:2010, Milk, milk products and infant formulae - Guidelines for the quantitative determination of melamine and cyanuric acid by LC-MS/MS, $116.00

ISO/IEC JTC 1, Information Technology

Registration of Organization Names in the United States

The Procedures for Registration of Organization Names in the United States of America (document ISSB 989) require that alphanumeric organization names be subject to a 90-day Public Review period prior to registration. For further information, please contact the Registration Coordinator at (212) 642-4946.

The following is a list of alphanumeric organization names that have been submitted to ANSI for registration. Alphanumeric names appearing for the first time are printed in bold type. Names with confidential contact information, as requested by the organization, list only public review dates.

PUBLIC REVIEW

E-CUBE
Public Review: October 29, 2010 to January 27, 2011

ECGRID
Public Review: September 10 to December 9, 2010

NOTE: Challenged alphanumeric names are underlined. The Procedures for Registration provide for a challenge process, which follows in brief. For complete details, see Section 6.4 of the Procedures.

A challenge is initiated when a letter from an interested entity is received by the Registration Coordinator. The letter shall identify the alphanumeric organization name being challenged and state the rationale supporting the challenge. A challenge fee shall accompany the letter. After receipt of the challenge, the alphanumeric organization name shall be marked as challenged in the Public Review list. The Registration Coordinator shall take no further action to register the challenged name until the challenge is resolved among the disputing parties.

Proposed Foreign Government Regulations

Call for Comment

U.S. manufacturers, exporters, regulatory agencies and standards developing organizations may be interested in proposed foreign technical regulations issued by Member countries of the World Trade Organization (WTO). In accordance with the WTO Agreement on Technical Barriers to Trade (TBT Agreement), Members are required to report proposed technical regulations that may significantly affect trade to the WTO Secretariat in Geneva, Switzerland. In turn, the Secretariat disseminates the information to all WTO Members. The purpose of this requirement is to provide global trading partners with an opportunity to review and comment on the regulations before they become final.

The National Center for Standards and Certification Information (NCSCI) at the National Institute of Standards and Technology (NIST), distributes these proposed foreign technical regulations to U.S. stakeholders via an online service, Notify U.S. Notify U.S. is an e-mail and Web service that allows interested U.S. parties to register, obtain notifications, and read full texts of regulations from countries and for industry sectors of interest to them. To register for Notify U.S., please go to Internet URL: http://www.nist.gov/notifyus/ and click on "Subscribe”. NCSCI is the WTO TBT Inquiry Point for the U.S. and receives all notifications and full texts of regulations to disseminate to U.S. Industry. For further information, please contact: NCSCI, NIST, 100 Bureau Drive, Gaithersburg, MD 20899-2160; Telephone: (301) 975-4040; Fax: (301) 926-1559; E-mail: ncsci@nist.gov or notifyus@nist.gov.
American National Standards
INCITS Executive Board
ANSI Accredited SDO and US TAG to ISO/IEC JTC 1, Information Technology

The InterNational Committee for Information Technology Standards (INCITS), an ANSI accredited SDO, is the forum for information technology developers, producers and users to create and maintain formal de jure IT standards. INCITS' mission is to promote the effective use of Information and Communication Technology through standardization in a way that balances the interests of all stakeholders and increases the global competitiveness of the member organizations.

The INCITS Executive Board serves as the consensus body with its oversight of programs of its 30+ Technical Committees. Additionally, the INCITS Executive Board exercises international leadership in its role as the US Technical Advisory Group (TAG) to ISO/IEC JTC 1, Information Technology.

The INCITS Executive Board seeks to broaden its membership base and is recruiting new participants in all membership categories:

- special interest (user, academic, consortia)
- non-business (government and major/minor SDOs)
- business (large/small businesses and consultants)

Membership in the INCITS Executive Board is open to all directly and materially affected parties in accordance with INCITS membership rules. To find out more about participating on the INCITS Executive Board, please contact Jennifer Garner at 202-626-5737 or jgarner@itic.org.

Call for Members
Society of Cable Telecommunications

ANSI Accredited Standards Developer

SCTE, an ANSI-accredited SDO, is the primary organization for the creation and maintenance of standards for the cable telecommunications industry. SCTE’s standards mission is to develop standards that meet the needs of cable system operators, content providers, network and customer premises equipment manufacturers, and all others who have an interest in the industry through a fair, balanced and transparent process.

SCTE is currently seeking to broaden the membership base of its ANSI consensus bodies and is interested in new members in all membership categories to participate in new work in fiber-optic networks, advanced advertising, 3D television, and other important topics. Of particular interest is membership from the content (program and advertising) provider and user communities.

Membership in the SCTE Standards Program is open to all directly and materially affected parties as defined in SCTE’s membership rules and operating procedures. More information is available at www.scte.org or by email from standards@scte.org.

ANSI Accredited Standards Developers

Approval of Reaccreditation
American Society of Civil Engineers (ASCE)

ANSI’s Executive Standards Council has approved the reaccreditation of the American Society of Civil Engineers (ASCE) under its recently revised operating procedures for documenting consensus on proposed American National Standards, effective October 27, 2010. For additional information, please contact: Mr. Lee Kusek, Administrator, Codes & Standards, American Society of Civil Engineers, 1801 Alexander Bell Drive, Reston, VA 20191; PHONE: (703) 295-6176; FAX: (703) 295-6361; E-mail: lkusek@asce.org.

ANSI-ASQ National Accreditation Board

Responsible Recycling
Notice of Accreditation
Certification Body
Orion Registrar, Inc.

The ANSI-ASQ National Accreditation Board is pleased to announce that the following certification body has earned ANAB accreditation for Responsible Recycling (R2):

Orion Registrar, Inc.
7850 Vance Drive, Suite 210
Arvada, CO 80003
www.orion4value.com
Lori Correa
PHONE: (303) 456-6681
E-mail: lori@orion4value.com

Recycling Industry Operating Standard
Notice of Accreditation
Certification Body
Orion Registrar, Inc.

The ANSI-ASQ National Accreditation Board is pleased to announce that the following certification body has earned ANAB accreditation for the Recycling Industry Operating Standard (RIOS):

Orion Registrar, Inc.
7850 Vance Drive, Suite 210
Arvada, CO 80003

Lori Correa
PHONE: (303) 456-6681
E-mail: lori@orion4value.com
International Organization for Standardization (ISO)

Calls for US TAG Administrators

ISO/TC 254 – Safety of Attractions

The ISO Technical Management board has created a new ISO Technical Committee on Safety of Attractions (ISO/TC 254). The secretariat has been assigned to GOST R (Russia). This is on a provisional basis as the committee is now allowed 18 months during which the members will need to review their title and scope, establish a preliminary work programme and structure, and elaborate on a draft business plan. The new project committee has the following scope:

Standardization in the field of safety of attractions

Organizations interested in serving as the US/TAG administrator or participating on the US/TAG should contact Joyce Hsu, ANSI, at isot@ansi.org.

ISO/TC 255 – Biogas

The ISO Technical Management board has created a new ISO Technical Committee on Biogas (ISO/PC 255). The secretariat has been assigned to SAC (China). This is on a provisional basis as the committee is now allowed 18 months during which the members will need to review their title and scope, establish a preliminary work programme and structure, and elaborate on a draft business plan. The new project committee has the following scope:

Standardization in the field of biogas

Organizations interested in serving as the US/TAG administrator or participating on the US/TAG should contact Joyce Hsu, ANSI, at isot@ansi.org.

ISO Proposals for a New Field of ISO Technical Activity

Additive Manufacturing – Rapid Technologies (Rapid Prototyping) – Fundamentals, Terms and Definitions, Quality Parameters, Supply Agreements

Comment Deadline: November 5, 2010

DIN (Germany) has submitted to ISO the attached new work item proposal for an ISO standard on “Additive Manufacturing - Rapid Technologies (Rapid Prototyping) - Fundamentals, terms and definitions, quality parameters, supply agreements” with the following scope statement:

This International Standard covers the principal considerations which apply to the design, fabrication and assessment of parts produced by additive fabrication and it lists the fields of activity. It specifies terms and definitions, deals with the fundamentals of the processes involved and specifies their requirements and selection criteria. It specifies relevant quality parameters and explains in detail component testing and the drawing up of supply agreements. It also covers safety-related and environmental aspects. This International Standard:

- differentiates between additive and conventional processes;
- facilitates improved assessment of different additive processes;
- specifies the quality parameters of different processes;
- specifies appropriate test procedures;
- recommends the scope and content of test and supply agreements.

Domestic and Communal Wastewater Sanitation

Comment Deadline: November 5, 2010

KEBS (Kenya) has submitted to ISO the attached proposal for a new field of ISO technical activity on “Domestic and communal wastewater sanitation” with the following scope statement:

Standardization in the field of domestic and communal wastewater sanitation. Areas of standardization include but are not limited to amenities for the safe disposal of human wastes and grey water (e.g. septic tanks, ecological sanitation facilities, dry toilets etc), environmentally sound transportation and reuse of the human waste. This will also include appropriate technological methods of treatment of the wastes, and, sanitation during emergency situation caused by natural disasters e.g. floods, war, etc. However, this excludes municipal and industrial wastewater which is not currently under any ISO technical committee.

Meeting Notices

ASC A10 – Construction and Demolition Operations

January 2011 Meeting

The American Society of Safety Engineers (ASSE) serves as the secretariat of the ANSI Accredited A10 Committee (A10 ASC) for Construction and Demolition Operations. The next meeting of the A10 ASC will be held on January 11, 2011 in Washington D.C. at the International Brotherhood of Electrical Workers (IBEW). Those who have interest in the committee are encouraged to attend.

In addition, subgroup meetings of the A10 ASC will be held the day before on January 10th. The A10 ASC has a series of subgroups addressing a wide variety of construction and demolition issues ranging from trenching and shoring to ergonomic injury prevention and health hazards. The subgroup meeting schedule will be provided upon request.

If you are interested in attending a meeting or subgroup meeting please contact the secretariat via the contact information below.

Timothy R. Fisher, CSP, CHMM, ARM, CPEA
Director, Practices and Standards
American Society of Safety Engineers (ASSE)
1800 East Oakton Street
Des Plaines, IL 60018
PHONE: (847) 768-3411
FAX: (847) 296-9221
E-mail: T Fisher@ASSE.org
ASC Z133 – Arboriculture Safety Standard Committee

The next meeting of ASC Z133 (Arboriculture Safety Standard Committee) will be held on Wednesday, November 10, 2010, at the Omni William Penn Hotel in Pittsburgh, PA. For more information, please contact Janet Huber, ASC Z133 Secretariat, at the International Society of Arboriculture ((217) 355-9411, x259) or email jhuber@isa-arbor.com.

Association of Challenge Course Technology (ACCT) Consensus Group Meeting

BSR/ACCT 11

The next meeting of the ACCT Consensus Group has been scheduled for the purpose of processing comments and draft standards for Proposed American National Standard BSR/ACCT 11-2006 for the Challenge Course Industry.

Meeting Date: November 9th, 2010
Time: 11:00 am Central time.

The meeting is open to the public. Persons wishing to attend this meeting are required to pre-register by contacting Bill Weaver, ACCT Professional Services Manager, bill@acctinfo.org, (800) 991-0286, extension 913.
2.1 Relevant Units

This Standard states values both in metric and U.S. customary units. As an exception, diameter of bolts and flange bolt holes are expressed in inch units only. These systems of units are to be regarded separately as standard. Within the text, the U.S. customary units are shown in parentheses or in separate tables. The values stated in each system are not exact equivalents; therefore, it is required that each system of units be used independently of the other. Except for diameter of bolts and flange bolt holes, combining values from the two systems constitutes nonconformance with the Standard.

2.2 Quality Systems

Requirements relating to the product manufacturers' quality system programs are described in Nonmandatory Appendix A.

2.3 References

Standards and specifications adopted by reference in this Standard are shown in Mandatory Appendix II. Insert new para. 2.4 here.

2.4 Flanged Joints

A flanged joint is composed of separate and independent, although interrelated components: the flanges, gasket, and bolting, which are assembled by another influence, the assembler. Proper controls must be exercised in the selection and application for all these elements to attain a joint that has acceptable leak tightness. Additional guidelines for flange assembly can be found in ASME PCC-1 (see Nonmandatory Appendix B).

3 MATERIALS

3.1 Composition

Gaskets shall be made of materials. Metal or nonmetal compaction as reinforcement or filler material is permitted.

3.2 Service Requirements

Selection of a material specification is the responsibility requirements of any application. The material selected the fluid and suitable for the pressure-temperature conditions of the service.

4 DIMENSIONS AND TOLERANCES

4.1 Dimensions

Gasket dimensions shall be in accordance with Tables 1 through 9 (Tables 1-1 through 1-9 of Appendix I) for the flanges, gaskets, sizes, and classes indicated. Selection of gasket thickness is the responsibility of the
MANDATORY APPENDIX II

Proposed New:

NONMANDATORY APPENDIX B
REFERENCES

The following is a list of informative publications referenced in this standard.

- **ASME PCC-01**: Guidelines for Pressure Boundary Bolted Flange Joint Assembly

Publisher: The American Society of Mechanical Engineers (ASME) Three Park Avenue, New York, NY 10016-5990; Order Department: 22 Law Drive, P.O. Box 2300, Fairfield, NJ 07007-2300
6 Minimum performance requirements

6.7 Rated service flow

For systems connected to a pressurized line, the rated service flow rate shall be equal to or less than the minimum, initial clean-system flow rate obtained during contaminant reduction testing at an inlet pressure of 410 ± 20 kPa (60 ± 3 psig) and a water temperature of 20 ± 3 °C (68 ± 5 °F). For systems with an internal pump, the rated service flow rate shall be equal to or less than the minimum, initial clean-system flow rate obtained during contaminant reduction testing. For manual fill or pour-through systems, the rated service flow rate shall be equal to or less than the minimum, initial clean-system flow rate obtained during contaminant reduction testing.

A system shall not have a rated service flow that is less than the applicable value specified in table 6.

REASON: There is currently no limitation on how low the rated service flow can be specified, including less than the minimum service flow. This strongly affects Standard 42 tests (test flow rate is controlled at the RSF) which would allow testing at an artificially low flow rate while operating at much higher flow rates in application. This relationship has been assumed in the past, but it is not clearly stated within the Standard.

6.9 Minimum service flow

The minimum, initial, clean-system flow rates specified in table 6 shall be attainable by the system at an inlet pressure of 210 kPa (30 psig) and a water temperature of 20 ± 3 °C (68 ± 5 °F), with a fully open outlet.
NSF/ANSI Standard for Drinking Water Additives —

Drinking water system components – Health effects

8.6 Chemical feeders and generators

8.6.1 Solid Chemical Feeders

Solid chemical feeders shall be evaluated only with the specific chemical formulations and forms that are recommended by the feeder manufacturer. The specific chemical formulation shall also comply with the requirements of NSF/ANSI Standard 60: Drinking Water Treatment Chemicals – Health Effects. The manufacturer’s use instructions or dataplate shall indicate this use limitation by inclusion of the following statement: *This product is designed for use with <chemical, form>. The use of other chemicals may result in unsafe conditions, including variation in erosion/feed rate, fire or explosion. Follow manufacturer’s instructions for the installation and operation of this equipment.*
BSR/UL 144

Proposals

14.1 A single-stage, first-stage, or special-purpose low pressure regulator shall incorporate in its assembly one or both of the devices specified in (a) and (b) to reduce the risk of a build up of an excessive outlet pressure.

   a) A Type I relief valve having a start-to-discharge (s-t-d) pressure setting within the limits specified in Table 14.1. See the Type I Relief Valve Flow Capacity Test, Section 24.
   b) An overpressure shutoff device that operates to shut off the flow of gas at the regulator inlet when the outlet pressure reaches the limits specified in Table 14.2. Such a device shall not be capable of flow until it has been manually reset. See the Shutoff Device Tests, Section 26.

14.3 A second-stage, two psig service, and the second stage of an integral two-stage, two psig service or automatic changeover regulator shall incorporate in its assembly one or both of the devices specified in (a) or (b) to reduce the risk of a build-up of excessive outlet pressure.

   a) A Type II pressure relief valve having a start-to-discharge (s-t-d) pressure setting within the limits specified in Table 14.1, and which will limit the downstream delivery pressure to 2 psig (13.8 kPa) for a second-stage regulator and the second-stage of an integral two-stage or automatic changeover regulator, and 5 psig (34.5 kPa) for two psig service regulators and the second-stage of an integral two psig service regulator under specified test conditions. See the Type II Relief Valve Flow Capacity Test, Section 25.
   b) An overpressure shutoff device in accordance with 14.1(b).

(DELETE) Table 14.3

Devices to reduce the risk of buildup of excessive outlet pressure

BSR/UL 1034

Only the affected portion of 61.1 is shown for brevity.

61.1 A burglary-resistant electric locking mechanism shall be permanently marked, except where otherwise indicated, where it is visible after installation, with the following information:

d) Electrical ratings:

1) AC Powered Units - Rated voltage; amperes, watts, or volt-amperes; and frequency.

2) DC Powered Units - Rated voltage; amperes, watts, or volt-amperes.

2) Standby Batteries - Rated voltage, and type and number of batteries to be used.

3) Standby Batteries - Rated voltage, and type and number of batteries to be used.
BSR/UL 1786 PROPOSAL

If the November 20, 2009 proposal is withdrawn, the current requirements in the standard would remain unchanged as shown below:

8.2.2 When applied in any position, the articulate probe shown in Figure 7 shall not contact live parts. Accessibility to the lampholder cavity is subject to a separate test described in lampholder and lamp base accessibility, Clause 9.2. Where necessary, an electrical indicator may be used to determine whether or not contact is made.
1. Revision to Correct Audibility Test Method to Require Two Reflecting Planes

PROPOSAL

72.2.1 The sound-power output of the appliance is to be measured in a reverberant room qualified to the requirements of the Standard for Precision Methods for the Determination of Sound Power Levels of Broad-Band Noise Sources in Reverberation Rooms, ANSI/ASA S12.31-1990, or Precision Methods for the Determination of Sound Power Levels of Discrete Frequency and Narrow-Band Noise Sources in Reverberation Rooms, ANSI/ASA S12.32-1990 of Acoustics Determination of Sound Power Levels of Noise Sources Using Sound Pressure Precision Method for Reverberation Rooms, ISO 3741, Technical Corrigendum 1. The sound power in each 1/3-octave band is to be determined using the comparison method. The A-weighing factor is to be added to each 1/3-octave band. The total power is to be determined on the basis of actual power. The total power then is to be converted to an equivalent sound pressure level for a radius of 10 feet (3.05 m) using the following formula:

\[
L_p = L_w - 20 \log_{10} R - 0.6 \\
L_p = L_w - 14 \log_{10} R - 0.6
\]

in which:

- \( L_p \) is the converted sound pressure level;
- \( L_w \) is the sound power level measured in the reverberation room;
- and
- \( R \) is the radius for the converted sound pressure level (10 feet).
